INTERFACE, INC. PROVIDES SUPPORT FOR MEDICAL APPLICATIONS

Interface, Inc., located in Scottsdale, Arizona, is the leading provider of load cells for medical applications, including blood separation dialysis, prosthesis testing, back and neck therapy, and the evaluation of many other types of medical products. Several of Interface's medical load cells use an internal overload protection using no moving parts. Overload protection is important in medical applications because even a slightly overloaded load cell could have serious consequences. These force and/or weight measurements can help ensure patient safety. These cells are available in many configurations with length as low as 3/4" and 50 gram capacity. They all use bonded foil strain gages. Please call (800) 947-5598 or visit www.interfaceforce.com to see why Interface is best in class!
