INTERFACE MODEL T8 ECO ROTARY TORQUE TRANSDUCER

The Interface Model T8 ECO Rotary Torque Transducer is an excellent general purpose non-contact torque sensor. Available in capacities from 0.2 to 200 Nm (1.8 to 1800 lbf-in), the T8 combines low cost and ease of use. The hexagonal shaped housing readily accommodates both floating and fixed installations, with threaded mounting holes in one of the flat sides. Features include a stainless steel shaft, high-resolution, low-noise digital electronics, 12-28VDC supply, and a convenient high-level +/-5V output.
