LowProfile®	2
Column	74
Canister	79
Load Washer	81
Rod End	85

1000 FATIGUE RATED LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 250 to 50K lbf (1.25 to 225 kN)
- Proprietary Interface temperature compensated strain gages
- 100 million fully reversed cycles
- Performance to 0.03%
- Eccentric load compensated
- Low deflection
- 0.0008%/°F (0.0015%/°C) temperature effect on output
- Barometric compensation
- Shunt calibration
- Tension and compression

STANDARD CONFIGURATION

Model 1010ACK-2.5K (shown)

OPTIONS

- Base (recommended)
- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- Integral cable – 10 ft (3 m)
- PT02E-10-6P bayonet connector
- PC04E-10-6P screw-type connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

1000 FATIGUE RATED LOAD CELL (U.S. & METRIC)

BAYONET CONNECTOR

Model 1010ACK-2.5K-B (Shown)

SCREW TYPE CONNECTOR

Model 1010AF-2.5K-B (Shown)

INTEGRAL 10 FT. CABLE CONNECTOR

Model 1010AJ-2.5K-B (Shown)

BASE

Model B1XX-1 (Shown)

1000 FATIGUE RATED HIGH CAPACITY LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 100K to 1000K lbf (450 to 4500 kN)
- Proprietary Interface temperature compensated strain gages
- 100 million fully reversed cycles
- Performance to 0.06%
- Eccentric load compensated
- Low deflection
- 0.0008%/°F (0.0015%/°C) temp. effect on output
- Barometric compensation
- Shunt calibration
- Tension and compression

BASE

Model B1XX (Shown)

1100 ULTRA PRECISION LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 300 to 200K lbf (1.5 to 900 kN)
- Proprietary Interface temperature compensated strain gages
- Performance to 0.02%
- High output – to 4 mV/V
- Eccentric load compensated
- Low deflection
- 0.0008%/°F (0.0015%/°C) temp. effect on output
- Shunt calibration
- High precision base included
- Barometric compensation
- Tension and compression

Calibration		Tension & Compression				
Material		Aluminum		Alloy Steel		

OPTIONS

- Compression overload protection
- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- Integral cable 10ft (3m)
- PT02E-10-6P bayonet connector
- PC04E-10-6P screw-type connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

1101 ULTRA PRECISION COMPRESSION ONLY LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1K to 50K lbf (5 to 250 kN)
- Proprietary Interface temperature compensated strain gages
- Performance to 0.02%
- High output - to 4 mV/V
- Eccentric load compensated
- Low deflection
- 0.0008%/°F (0.0015%/°C) temp. effect on output
- Shunt calibration
- High precision base included
- Barometric compensation

OPTIONS

- Base (recommended)
- Multiple bridge
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Special temperature range

CONNECTOR OPTIONS

- PT02E-10-6P Bayonet Connector
- PC04E-10-6P Screw-Type Connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

WTS 1200 STANDARD PRECISION LOWPROFILE™ WIRELESS LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 300 to 100K lbf (1.5 to 450 kN)
- Proprietary Interface temperature compensated strain gages
- Performance to 0.0425%
- 2.4 GHZ transceiver
- Eccentric load compensated
- Low deflection
- Barometric compensation
- Tension and compression
- Compact size

OPTIONS

- Base (recommended)
- Standardized output
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm

COMPATIBLE WITH

Model WTS-BS-1-HA (Shown)

STANDARD CONFIGURATION

Model 1220WTS-50K (Shown)

Strain Gauge Excitation – VDC	3	
Strain Gauge Resistance (min) – Ω	85	
Strain Gauge Sensitivity (max) – mV/V	±4.5	
Offset Temperature Stability (max) – ppm/°C	4	
Gain Temperature Stability (max) – ppm/°C	5	
Nonlinearity Before Linearization (max) – ppm of FR	25	
Internal Resolution/Bits	16,000,000 / 24	
Noise Free Resolution at 1 Sample Per Second	400,000 / 18.75	
Transmission Rates – ms to day	From 5 to 1	
BATTERY LIFE		
Battery	2 x AAA Alkaline	
Battery Life – hrs	300 typically	
RADIO		
Radio Type	License exempt transceiver	
Radio Frequency – GHz	2.4	
Transmit Power – mW	10	
Range	m	Up to 610
	ft	Up to 2,000
ENVIRONMENTAL		
Operating Temperature Range	°C	-20 to 55
	°F	-4 to 131
Storage Temperature Range (no batteries)	°C	-40 to 85
	°F	-40 to 185
Maximum Humidity – %	95 non-condensing	
IP Rating (WTS-AM-1 & WTS-AM-1-D)	IP67/Nema4	
Telemetry Housing	Polyamide resin	
Material	Heat Treated Steel or Stainless Steel	

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

1201 STANDARD LOAD CELL COMPRESSION-ONLY (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1K to 400K lbf (5 to 1800 kN)
- Performance to 0.03%
- High output – to 4 mV/V
- Eccentric load compensated
- 0.0008%/°F (0.0015%/°C) temp. effect on output
- Low deflection
- Shunt calibration
- Barometric compensation
- Compact size
- Counterbored mounting holes

OPTIONS

- Base (recommended)
- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- Integral cable – 10 ft (3 m)
- PT02E-10-6P bayonet connector
- PC04E-10-6P screw-type connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

1201 STANDARD LOAD CELL COMPRESSION-ONLY (US & METRIC)

BASE

Model B1XX-1

1200 AND 1201 SERIES 3-WIRE AMPLIFIED LOAD CELL UNIVERSAL OR COMPRESSION-ONLY (U.S. & METRIC)

FEATURES & BENEFITS

Why the Interface model 1200 and 1201 Standard 3-Wire Amplified:

- Load Cell is the best in class:
- Proprietary Interface temperature compensated strain gages
- Eccentric load compensated
- Low deflection
- Shunt calibration
- Tension and compression
- Compact size
- 3-wire internal amp choice of 4-20 mA, $\pm 5V$, $\pm 10V$, 0-5V, 0-10V

OPTIONS

- Base (recommended)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm

STANDARD CONFIGURATION

Model 1210ACK-5K-1 (Shown)

CONNECTOR OPTIONS

- PT02E-10-6P bayonet connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

12x8 FLANGE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Standard flange design mounts directly to cylinders
- Tension and compression
- Fatigue rated
- Proprietary Interface temperature compensated strain gages
- Performance to 0.05%
- Eccentric load compensated
- Low deflection
- Alignment hole
- 0.0008%/°F (0.0015%/°C) temp. effect on output
- Barometric compensation
- Ease of installation
- Increased accuracy
- Ability to measure torsion with optional bridges
- Fatigue rated – Can survive 100 million fully reversed load cycles. Ideal for long term cycle testing when failure is unfordable

CONNECTOR OPTIONS

- Integral cable
- PC04E-10-6P screw connector
- PT02E-10-6P bayonet connector

STANDARD CONFIGURATION

Model 1228ACK-30K (Shown)

OPTIONS

- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Add connector to cable
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length

ACCESSORIES

- Mating connector
- Instrumentation

Note:

- Dimensions are approximate
- Contact factory for current drawings
- *2.41 (61.2) for 50 kN
- For lower capacities; refer to the 1700 model

All product descriptions are for general information only. They are not to be understood as a guarantee of quality or durability and do not constitute any liability what so ever.

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

OPTIONS

- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range

CONNECTOR OPTIONS

- PT02E-12-8P bayonet connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

1601 GOLD STANDARD™ CALIBRATION COMPRESSION-ONLY LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1K to 100K lbf (4.5 to 450 kN)
- 0.01% creep
- High output – to 4mV/V
- High precision base installed
- 3 run NIST traceable ASTM E74 calibration
- Eccentric load compensated
- 0.0008%/°F temperature effect on output
- 4% lower load limit

STANDARD CONFIGURATION

1606 GOLD STANDARD™ LOW CAPACITY CALIBRATION LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 50 to 300 lbf (250 to 1,500 N)
- Tension & compression in one unit
- 0.02% creep
- 3 run NIST traceable ASTM E74 calibration
- Factory installed calibration adapter
- Eccentric load compensated
- 0.0008%/°F temperature effect on output
- 4% lower load limit per ASTM E74
- Higher capacities available

1700 FLANGE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 220 to 14K lbf (1 to 63 kN)
- Standard flange design mounts directly to cylinders
- Tension and compression
- Proprietary Interface temp. compensated strain gages
- Performance to 0.05%
- Eccentric load compensated
- 0.0008%/°F (0.0015%/°C) temp. effect on output

1800 PLATINUM STANDARD™ CALIBRATION LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1.1K to 55K lbf (5 to 250 kN)
- Handcrafted excellence for the most demanding calibration requirements
- Tension and compression in one unit
- 0.005% nonrepeatability
- Capable of 2% lower load limit per ASTM E74
- High precision base installed
- ASTM E74 calibration standard
- Eccentric load compensated
- 0.0008%/°F temp. effect on output
- Connector protector standard

Calibration		Tension & Compression				
Material		Alloy steel				

OPTIONS

- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- PT02E-12-8P bayonet connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

2101 DUAL RANGE STANDARD LOAD CELL COMPRESSION-ONLY (U.S. & METRIC)

FEATURES & BENEFITS

- Dual range allows for accurate measurements throughout test range
- 4X to 5X overload protection on lower capacity load cell
- Proprietary Interface temperature compensated gages
- High output for both ranges-to 4 mV/V
- Eccentric load compensated
- Shunt calibration
- Low deflection
- Lower capacity same as 1201 Compression-Only Low Profile
- Higher capacity same as 1200 Universal Low Profile

OPTIONS

- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- Integral cable (10 ft)
- PT02E-10-6P bayonet connector
- PC04E-10-6P screw-type connector

STANDARD CONFIGURATION

Model 2121-10K/50K (Shown)

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

2300 HIGH CAPACITY LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities 630, 1000, 2000 kN (140K, 225K, 450K lbf)
- Accuracy class 0.05% FS
- Tension & compression
- Low profile, small mass
- Flange mounted
- Dual bridge available

2400 STANDARD STAINLESS STEEL LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 100 to 5K lbf (0.5 to 22 kN)
- Proprietary Interface temperature compensated strain gages
- Stainless steel construction
- Hermetically sealed
- Tension and compression
- Compact size
- Counterbored mounting holes

OPTIONS

- Base (recommended)
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Special threads
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- MS3102E-14S-6P

ACCESSORIES

- Mating connector
- Instrumentation
- Loading hardware

2400 HIGH CAPACITY STANDARD STAINLESS STEEL LOAD CELL (U.S. & METRIC)

BAYONET CONNECTOR

Model 2450BXM-50K

BASE

Model B24XX

2404 STANDARD STAINLESS STEEL 2-WIRE AMPLIFIED LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 100 to 5K lbf (0.44 to 22.2 kN)
- Stainless steel construction
- Hermetically sealed
- Tension and compression
- Counterbored mounting holes
- Internally amplified with 4-20 mA output
- Proprietary Interface temperature compensated strain gages

STANDARD CONFIGURATION

WSSCLC STAINLESS STEEL LOW PROFILE COMPRESSION LOAD CELL (U.S. & METRIC)

The WSSCLC series of load cells has been designed for a wide range of force measurement and weighing applications where space is limited. The WSSCLC is constructed from stainless steel and has a fully welded construction, offering a high level of corrosion resistance for use in harsh environments, with environmental sealing to IP68.

Available in capacities from 220 - 16.5K lbf (100 - 7,500 kg) to 22K - 440.9K lbf (10 - 200 MT), there are many applications ideally suited to the WSSCLC, including restricted height weighing applications, general force measurement and press calibration.

Interface, Inc. can provide the WSSCLC on its own or combined with any of our instrumentation range, to offer a more complete package. Please consult our technical department for any advice required on suitable instrumentation solutions.

FEATURES & BENEFITS

- Capacities from 220 - 16.5K lbf (100 - 7,500 kg) to 22K - 440.9K lbf (10 - 200 MT)
- High Stability
- Fully welded stainless steel construction
- Low height
- Environmentally sealed to IP68
- Accuracy $<\pm 0.023\%$

OPTIONS

- Load cap
- Weighing assembly up to 220.4K lbf (up to 100 MT) - See WSSCLC-MOUNT data sheet
- Mounting plate up to 220.4K lbf (up to 100 MT)
- TEDS option (when used with 9320 handheld display)

TYPICAL APPLICATIONS

- Vessel weighing
- Press force monitoring
- Center of gravity systems

A4200 & A4600 WEIGHCHECK LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacity ranges from 2.5K to 50K lbf (11.1 to 222 kN)
- High output – 4 mV/V
- Self-centering in all directions
- High safe side load – to 400%
- Standardized output – $\pm 0.1\%$
- Zinc plated (A4200) or stainless steel (A4600)
- Factory assembled for easy field installation
- Static/dynamic/in-motion capabilities
- Low height – 4.0 in (101.6 mm) for 2.5K, 5K, 10K (11.1, 22.2, 44.5 kN); 5.0 in (127 mm) for 25K, 50K lbf (111, 222 kN)

WSSCLC-MOUNT WEIGHING ASSEMBLY (U.S. & METRIC)

The WSSCLC-MOUNT is a complete weighing assembly for use with the WSSCLC range of load cells (see separate data sheet). The weighing assembly facilitates easy mounting for the engineer on site, and incorporates a number of key features that allows the best installed accuracy to be achieved. These include an anti-lift off mechanism, compensation for thermal expansion and for off-axis loading.

Manufactured from stainless steel, the WSSCLC-MOUNT is available in three sizes (assembly instructions are shown on the reverse of this data sheet). The unit is equipped with self load alignment to mitigate against positioning errors and deformation.

STANDARD CONFIGURATION

MODEL WSSCLC-MOUNT-1 (Shown)

FEATURES & BENEFITS

- Stainless steel construction
- Ensures best installation accuracy is achieved
- Incorporates a safety retainer to prevent accidental vessel lifting or sliding
- Available in three sizes
- Suitable for use with the WSSCLC load cell series

TYPICAL APPLICATIONS

- Vessel weighing
- Silo weighing
- Process weighing & control
- Tank weighing

	kN	40				80		210	

ASSEMBLY INSTRUCTIONS

- Fix the WSSCLC-MOUNT loading plate (1) to the structure or to the floor, checking that the floor is flat and even. If not, use separate leveling plates.
- Place the system to be weighed on the upper plates (2), taking care that the load cells are not overloaded.
- Adjust and fix the upper plate (2), ensuring that it is parallel and in axis with the lower plate.
- Check that the safety retainer (3) is centered inside the hole, ensuring that it is free to move, especially during weighing.

LOAD CELL REPLACEMENT

- Lift the weighing units upper plate (2) by unscrewing the two lifting jacks (4), ensuring that the upper plate is jacked evenly.
- Replace the load cell
- Screw the two jacks (4) to lower the upper plate evenly back onto the load cells

2160 HIGH CAPACITY COLUMN LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 300K to 1000K (1335 to 4450 kN)
- Performance to $\pm 0.15\%$ FS
- Compact size
- Metric and English models

- PC02E-12-8P connector

ACCESSORIES

- Mating connector
- Mating cable
- Instrumentation
- Loading hardware

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

LWHP18 COMPRESSION LOAD WASHER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 5 to 5,000kN (1.12K to 1124K lbf)
- IP67 environmental protection
- Stainless steel construction

SPECIFICATIONS

ACCURACY – (MAX ERROR)			
Capacities	Metric	5 to 200kN	500 to 5000kN
	U.S.	1.12 to 45K lbf	112 to 1.12K lbf
Nonlinearity – %FS		±0.5	
Hysteresis – %FS		±0.5	
Nonrepeatability – %RO		±0.1	
Creep, in 30 min – %		±0.1	
TEMPERATURE			
Effect on Zero – %RO / deg	°C	±0.01	
Effect on Output – % / deg	°C	±0.01	
Compensated Range	°C	-10 to +70	
	°F	+14 to +158	
Operating Range	°C	-30 to +80	
	°F	-22 to +176	
ELECTRICAL			
Output – mV/V		1 ±20%	
Excitation Voltage – VDC		2 - 12	
Bridge Resistance – Ohm		350	
Electrical Connection – Cable	m	3	Connector – Binder581
	ft	9.8	
MECHANICAL			
Safe Overload – %RO		150	
Deflection at Rated Capacity – mm		< 0.1	
IP Rating		IP67	
Material		Stainless steel	

OPTIONS

- Special temperature range
- Internal shunt resistor – 100% output
- Standardized output
- Add connector to cable
- Custom calibration
- Transducer Electronic Data Sheet (TEDS)
- Cable length
- 100% control signal (internal shunt cal)

ACCESSORIES

- Instrumentation

STANDARD CONFIGURATION

Model LWHP18 5 kN (Shown)

Model LWHP18 500 - 5000 kN (Shown)

LOADING DIAGRAM

CONNECTOR OPTIONS

- 3 m (10 ft) integral cable
- Series 723 binder (5 to 5000 kN or 112 to 1124K lbf)

BPL BRAKE PEDAL LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Lowest nonlinearity and hysteresis of any brake pedal load cell – < 0.05%
- Ultra low height
- Low sensitivity to off-center loads – < 1.0% / in
- Mounts directly to pedal with included strap(s)
- Interchangeable mounting plates
- Storage case included
- For use with gas, brake or clutch pedal
- Storage case included

LBMU HIGH ACCURACY COMPRESSION LOAD BUTTON (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 100 - 1K lbf (0.45 - 4.45 kN)
- Temperature compensated
- Superior to any other load button
- Stainless steel
- Enhanced eccentric load rejection
- Low power

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Nonlinearity – %FS		±0.15
Hysteresis – %FS		±0.15
Nonrepeatability – %RO		±0.05
TEMPERATURE		
Compensated Range	°F	+70 to +170
	°C	+20 to +75
Operating Range	°F	-65 to +200
	°C	-55 to +90
Effect on Zero – %RO / deg	°F	±0.0005
Effect on Output – % / deg	°F	±0.0002
Zero Balance – %FS		±2.0
ELECTRICAL		
Rated Output – mV/V (Nominal)		2.0
Bridge Resistance – Ω (Nominal)		700
Excitational Voltage – VDC		5
MECHANICAL		
Safe Overload – %CAP		150
Calibration		Compression
Ultimate Overload – %CAP		300
Deflection	in	0.001 - 0.003
	mm	0.025 - 0.076
Cable Type		4-Conductor
Material		Stainless steel

OPTIONS

- Cable length
- Standardized output
- Custom calibration
- Add connector to cable
- Special temperature range
- Transducer Electronic Data Sheet (TEDS)

CONNECTOR OPTIONS

- 5 ft (1.5 m) integral cable

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

LBMU HIGH ACCURACY COMPRESSION LOAD BUTTON (U.S. & METRIC)

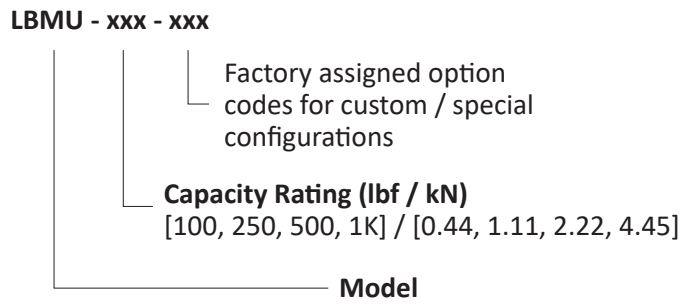

SAMPLE SYSTEM OVERVIEW

WIRING DIAGRAM

ORDERING INFORMATION

LW LOAD WASHER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 5 to 100k lbf (0.02 to 44.5 kN)
- Wide selection of OD, ID, and height (as low as 0.25 in or 6.4 mm) combinations
- Stainless steel construction

LWCF CLAMPING FORCE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 15 to 1500 kN (3.37K to 337K lbf)
- Ideal for determining bolt preload
- Low height and robust design

LWHP14 LOAD WASHER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.05 to 100 kN (11.2 to 22.5K lbf)
- Ideal for applications requiring a thru-hole

OPTIONS

- Cable length
- Standardized output
- Add connector to cable
- Custom calibration
- Special temperature range
- 100% control signal (internal shunt calibration)
- Transducer Electronic Data Sheet (TEDS)

CONNECTOR OPTIONS

- 3 m (10 ft) integral cable

ACCESSORIES

- Instrumentation

MBP MINIATURE BEAM OVERLOAD PROTECTED LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 2.5 to 10 lbf (5 to 100 N & 0.5 to 5 kg)
- Proprietary Interface temperature compensated strain gages
- 10X overload protection
- Low height – 0.99 in (25.1 mm)
- 0.0008% °F temperature effect on output

SPECIFICATIONS

REC ROD END LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1K to 50K lbf (5 to 220 kN)
- Proprietary Interface temperature compensated strain gages
- Stainless steel construction (1K lbf or 5 kN is aluminum)
- Low deflection

OPTIONS

- 5K-50K: MS3102E-14-5P connector optional
- Standardized output
- Special temperature range
- Custom calibration
- Transducer Electronic Data Sheet (TEDS)
- Standardized output

ACCESSORIES

- Instrumentation
- Mating connector

STANDARD CONFIGURATION

Model SMT1-11 (Shown)

OPTIONS

- Cable length
- Standardized outputs
- Custom calibration
- Transducer Electronic Data Sheets (TEDS)
- Add connector to cable
- Special temperature range

ACCESSORIES

- Instrumentation
- Mounting hardware

CONNECTION OPTIONS

- 5 ft (1.5 m) integral cable

Notes:
Consult factory for more technical information

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

SMTM MICRO S-TYPE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacity 5, 25, 50 lbf (20, 100, 200 N)
- Can be used in tension & compression
- Micro sized – 0.68 x 0.75 x 0.29 in (17.3 x 19.1 x 7.3 mm)
- Excellent temperature compensation (0.005% / °F temperature effect on output)
- Overload protected up to 10x capacity

SPECIFICATIONS

SSMF FATIGUE RATED S-TYPE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Fatigue-rated: 1×10^7 fully reversed cycles
- Proprietary Interface temperature compensated strain gages
- Capacities 25 to 2.5K lbf (100 to 10K N)
- Environmentally sealed
- 0.02% nonrepeatability
- Near zero temp. effect on output – 0.0008%/°F (0.0015%/°C)
- Very low creep – 0.025%
- Tension and compression

STANDARD CONFIGURATION

Model SPI (Shown)

OPTIONS

- Standardized output
- Custom calibration
- Transducer Electronic Data Sheet (TEDS)
- Add connector to cable
- Special temperature range

ACCESSORIES

- Instrumentation

CONNECTOR OPTIONS

- 5 ft (1.5 m) integral cable

* Consult factory for more technical information

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

SPI PLATFORM SCALE LOAD CELL (U.S. & METRIC)

Notes:
* C indicates compression load direction / primary axis

SPI PLATFORM HIGH CAPACITY SCALE LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities: 25, 50, 100, 150 lbf (111, 222, 445, 667 N)
- Proprietary Interface temperature compensated strain gages
- 0.01% non-repeatability
- Safe overload to 200%
- 0.0008%/°F temp. effect on output
- Eccentric load compensated

ULC ULTRA LOW CAPACITY LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Proprietary Interface temperature compensated strain gages
- Highest performance gram cell in the world
- Overload protected
- Safe side load overload to 5X capacity
- Low extraneous load sensitivity
- Low temperature effect on zero (0.002%/°F)
- Capacity down to 50 grams
- Tension and compression

5400 SOLID FLANGE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1K to 500K lbf-in (110 to 55K Nm)
- High torsional stiffness
- Flange mount
- Low deflection
- Metric models have mounting holes sized for metric fasteners

5500 CALIBRATION GRADE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 2K to 300K lbf-in (220 to 33K Nm)
- High torsional stiffness
- Flange to flange mounting
- Low deflection
- Low overhang moment sensitivity
- Low axial force sensitivity

STANDARD CONFIGURATION

MODEL 5500 (Shown)

OPTIONS

- ASTM E2428 Calibration (Some limitations apply, consult factory)
- Mating connector
- Mating cable

MRT MINIATURE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Low capacity – 0.2 to 20 Nm (1.77 to 177 lbf-in)
- Proprietary Interface temperature compensated strain gages
- Small size – 41 x 33 mm (1.6 in OD x 1.25 in)
- Excellent linearity & repeatability
- Low deflection – high torsional stiffness

MRT2P MINIATURE OVERLOAD PROTECTED TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.2 to 2 Nm(1.77 to 17.7 lbf-in)
- 3x overload protection
- Proprietary Interface temperature compensated strain gages
- Small size - 70 x 60 mm (2.75 x 2.25 in)
- Excellent linearity & repeatability
- Low deflection - high torsional stiffness

MODEL MRT2P (Shown)

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Nonlinearity – %FS	± 0.10	
Hysteresis – %FS	± 0.10	
Nonrepeatability – %RO	± 0.05	
TEMPERATURE		
Compensated Range	°C	-9 to +46
	°F	+15 to +115
Operating Range	°C	-54 to +93
	°F	-65 to +200
Effect on Zero – % / deg	°F	±0.20
Effect on Output – %RO / deg	°F	±0.10
ELECTRICAL		
Output – mV/V	2.00 ± 0.30	
Excitation – VDC MAX	20	
Bridge Resistance – Ohms	700 ± 7	
Electrical Connection – Integral Cable	m	1.5
	ft	5
MECHANICAL		
Safe torsion – %RO	300	300
Deflection at Capacity – rad	0.01	0.007
Overhung Moment – %CAP MAX	100	100
Shear MAX	N	13
	lbf	2.9
Material	Aluminum	

*Patent Pending

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

T27 HOLLOW FLANGE ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 50 to 10K Nm (443 to 88.5K lbf-in)
- ±5V output
- Very short axial length
- Large thru-hole design
- Bearingless

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		±0.1
Nonrepeatability – %RO		±0.02
TEMPERATURE		
Effect on Zero – %RO / deg	°C	±0.02
Effect on Output – % / deg	°C	±0.01
Compensated Range	°C	+5 to +45
	°F	+41 to +113
Operating Range	°C	0 to +60
	°F	+32 to +140
ELECTRICAL		
Output – VDC		±5
Bandwidth – kHz – dB		1 – 3
Supply Voltage – VDC		12 - 28
Supply Current – mA		90
Electrical Connection		12-pin binder
Resolution		Analog
MECHANICAL		
Safe Overload – %RO		200
Balance Grade – DIN ISO 1940		6.3
IP Rating		IP54
Material		Alloy steel

OPTIONS

- ±10V output
- Speed measurement – 30 pulse, +5V TTL

TS11 FLANGE STYLE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 10 to 20K Nm (88.5 to 177K lbf-in)
- Compact
- Thru-hole design
- Threaded mounting holes

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		± 0.1

Excitation Voltage – VDC MAX		12
Bridge Resistance – Ohm		350
Electrical Connection – pin		6
MECHANICAL		
Safe Overload – %RO		150
Safe Overhung Moment – %FS		50
Deflection at Capacity – rod		0.003
Material		Alloy Steel

OPTIONS

- 100 % control signal (internal shunt cal)
- High accuracy to 0.05% FS
- A2LA accredited calibration
- Mating cable (straight or right angle)
- Extended temperature range

TS16 SQUARE FLANGE STYLE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 2 to 2K Nm (17.7 to 17.7K lbf-in)
- Convenient flange mounting
- Accepts standard sockets

OPTIONS

- 100% Control Signal (RCAL)
- Combined Error 0.1% FS

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		±0.2
Nonrepeatability – %		±0.02
TEMPERATURE		
Effect on Zero – %RO / deg	°C	±0.02
Effect on Output – % / deg	°C	±0.01
Rated rRange	°C	-5 to +45

STANDARD CONFIGURATION

MODEL TSCF-10 (Shown)

The TSCF is used in test benches for measuring the reaction torque (Wired and non-rotating).

The torque transducer consists of two flanges, which are connected with each other via 4 measuring spokes. The two flanges have the same bolt circle of 5.8 in (149 mm). The pilots are designed as an external and internal collar with \varnothing 4.5 in (\varnothing 114.3 mm).

Due to the large diameter of the torque transducer TSCF and the arrangement of the measuring spokes in the axial direction, this torque transducer can also absorb bending moments up to 1770 lbf-in (200 Nm), which are caused by the dead weight of the drive motor.

The connection is made via a terminal box with M12 connectors.

Optionally, an integral measuring amplifier can be provided instead of the terminal box so that the transducer has a voltage output of +/-10V.

AT104 COMPACT SIZE FORCE/TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 20/0.1 & 50/0.5 N/Nm (4.5/0.89 & 11.2/4.4 lbf/lbf-in)
- Reaction torque/force sensor, non-rotating
- Very short axial length
- Reliable and durable
- Simple handling and assembly
- Side cable exit

TS14 SQUARE DRIVE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1 to 5K Nm (8.85 to 44.2K lbf-in)
- Simple operation - no moving parts
- Useful for auditing fastener torques
- Fits standard socket wrenches

OPTIONS

- 100% Control Signal (Internal Shunt Cal)
- High accuracy +0.1%FS
- A2LA Accredited Calibration
- Mating Cable (straight or right angle)
- Extended Temperature Range

TS17 HEX DRIVE REACTION TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.1 to 20 Nm (0.07 to 177 lbf-in)
- Simple operation - no moving parts
- Useful for auditing fastener torques
- Quick-connect chuck

AxialTQ™ WIRELESS ROTARY TORQUE TRANSDUCER

The Interface AxialTQ torque measurement system was developed in direct collaboration with over 30 end-users who shared their wish-lists for operational priorities, user interface, design, features, real-world field issues and more.

AxialTQ torque measurement system redefines the category in terms of function, accuracy and customizable compatibility.

The rotor sensing element and electronics are the heart of the system which will be offered in 8 torque capacities in 5 DIN sizes. With the flexible capability of stator and output module mounting, the AxialTQ system offers an infinite number of configurations to meet any application need.

MODELS

AxialTQ-EX

- Designed to minimize uncertainty while covering a broad array of torque measurement applications.
- An accuracy class of 0.05 with an axial gap and dual analog and digital simultaneous outputs.

FEATURES & BENEFITS

- Crash-Proof Design for Maximum Reliability
- Versatile Design for Application Flexibility
- Flexible Configuration
- Simultaneous Analog and Digital Outputs Enables Real-time Control and Data Collection
- Interchangeable Stators and Output Modules to Minimize Parts Inventory
- Wide Range of Standard Components to Match Any Application

OPTIONS

- Balanced Rotor to G2.5
- Speed Sensing 60 PPR

Euro Pat App 3 662 236

U.S. dimensions and capacities are provided for conversion only. Standard products have International System of Units (SI) capacities and dimensions.

T2 PRECISION ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.1 to 20K Nm (0.88 to 177K lbf-in)
- Speed up to 15K RPM
- ± 5 VDC output
- 12-28 VDC supply
- Contactless data transmission
- Digital electronics with on-shaft shunt
- 0.1% combined error
- 10 kHz sample rate
- 16-bit resolution
- Very short overall length

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		± 0.1
Nonrepeatability – %FS		± 0.02
Resolution – bit		16
TEMPERATURE		
Effect on Zero – %RO / deg	$^{\circ}\text{C}$	± 0.02
Effect on Output – % / deg	$^{\circ}\text{C}$	± 0.01
Compensated Range	$^{\circ}\text{C}$	+5 to +45
	$^{\circ}\text{F}$	+41 to +113
Operating Range	$^{\circ}\text{C}$	0 to +60
	$^{\circ}\text{F}$	+32 to +140
Storage Range	$^{\circ}\text{C}$	-10 to +70
	$^{\circ}\text{F}$	+14 to +158
ELECTRICAL		
Supply Voltage – VDC		12 - 28
Supply Current – mA		≤ 60
Output – VDC		± 5
Bandwidth, Hz (-3dB)		1,000
Sample Rate – Hz		10,000
Calibration Signal – %FS		100
Electrical Connection		12-pin binder series 581 (Includes mate)
ENCODER OPTION		
Capacities	0.1 - 1K Nm	360 pulse/rev, 2-track, +5V TTL, 90° offset, quadrature encoder
	0.88 - 8.85K lbf-in	
	2K - 20K Nm	60 pulse/rev, 1-track, +5V TTL
	17K - 177K lbf-in	
MECHANICAL		
Safe Overload – %RO		200
Max Speed – RPM		Varies with Capacity (see table)
Shaft Material		Alloy steel
Housing Material		Aluminum

STANDARD CONFIGURATION

MODEL T2 (Shown)

OPTIONS

- Speed and angle output – 360 Pulse TTL, 2-Tracks
- 90° offset, available on capacities up to 1K Nm (8.85K lbf-in) only
- +10V Torque Output
- RS485
- Keyed shafts – per DIN 6885.1
- $\pm 0.05\%$ combined error
- Mating cable assembly

T4 GENERAL PURPOSE ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.1 to 1K Nm (0.88 to 8.85K lbf-in)
- Speed up to 15K RPM
- ± 5 VDC output
- 12-28 VDC supply
- Contactless data transmission
- Digital electronics with on-shaft shunt
- 0.2% combined error
- 10 kHz sample rate
- 12-bit resolution
- Very short overall length

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		± 0.2
Nonrepeatability – %FS		± 0.04
Resolution – bit		12
TEMPERATURE		
Effect on Zero – %RO / deg	$^{\circ}\text{C}$	± 0.03
Effect on Output – % / deg	$^{\circ}\text{C}$	± 0.015
Compensated Range	$^{\circ}\text{C}$	+5 to +45
	$^{\circ}\text{F}$	+41 to +113

T6 DUAL RANGE ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Dual range capacities – 10:1 ratio (5/0.5 to 20K/2K Nm) (44.3/4.43 to 177K to 17.7K lbf-in)
- ±5 VDC output
- Digital electronics
- Stainless steel shaft
- 12 to 28 VDC supply
- Contactless
- 5 kHz sample rate – each range
- 16-bit

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		±0.1
Nonrepeatability – %FS		±0.02
TEMPERATURE		
Effect on Zero – % RO / deg	°C	±0.02
Effect on Output – % / deg	°C	±0.01
Rated Range	°C	+5 to +45
	°F	+41 to +113
Operating Range	°C	0 to +60
	°F	+32 to +140
ELECTRICAL		
Output – VDC		±5
Bandwidth – kHz – dB		3 – 3
Calibration Signal – %RO		100
Speed Output – puls/rev.		60
Supply Voltage – VDC		+12 to +28
Supply Current – mA		60
Electrical Connection – pin		12
Resolution – bit		16
Sample Rate – kHz		5
MECHANICAL		
Safe Overload – %RO		200
Max Speed – RPM		Varies with capacity (see table)
Shaft Material		Stainless steel
Housing Material		Aluminum

STANDARD CONFIGURATION

MODEL T6 (Shown)

OPTIONS

- Speed & angle measurement – 360 pulse TTL, 2-tracks 90° offset, available on capacities up to 1K Nm (8.85K lbf-in) only
- Speed output - 60 Pulse TTL, 1-track, available on capacities 2K Nm (17K lbf-in) & above
- +10V torque output
- RS485
- Keyed shafts - per Din 6885.1

T8 ECO ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.2 to 200 Nm (1.77 to 1.77K lbf-in)
- Stainless steel shaft
- ±5 VDC output
- 12 to 28 VDC supply
- Contactless

T11 BEARINGLESS ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.005 to 150 Nm (0.04 to 1.33K lbf-in)
- Bearingless
- High speed – to 30K RPM
- ± 5 VDC output
- Very low range
- Eliminates bearing friction effects
- 10 kHz sample rate
- 12 to 28 VDC supply
- 16-bit resolution

T14 SLIP-RING ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 1 to 500 Nm (8.85 to 4.4K lbf-in)
- Integrated speed and angle measurement option
- Keyed shaft
- mV/V output
- Small, compact size
- 360 pulse speed and angle measurement

T15 HEX DRIVE ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.2 to 20 Nm (1.77 to 177 lbf-in)
- Contactless - no slip rings
- High-level $\pm 5V$ output
- 12-28V supply
- Bearingless non-contact design
- Angle measurement option
- Quick-Connect chuck
- 16-bit resolution

T18 ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 10 to 100 Nm (88.5 to 885 lbf-in)
- Keyed Shaft per DIN 6885
- ± 5 VDC output
- Speed Measurement Option Available
- Contactless
- Low Cost
- Short overall length

SPECIFICATIONS

ACCURACY – (MAX ERROR)		
Combined Error – %FS		± 0.25
Nonrepeatability – %FS		± 0.05

STANDARD CONFIGURATION

MODEL T22 (Shown)

OPTIONS

- Speed & angle measurement - 360 pulse TTL, 2-tracks 90° offset, available on capacities up to 1K Nm (8.85K lbf-in) only
- Speed output - 60 pulse TTL, 1-track, available on capacities 2K Nm (17.7K lbf-in) & above
- ± 10 V torque output
- USB output & software

T25 HIGH SPEED ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 0.1 Nm to 5K Nm (0.885 to 44.3K lbf-in)
- 0.1% combined error
- Speed up to 30K RPM
- Unique design eliminates RPM dependent bearing friction effects
- Foot or float mount
- Remote activated on-shaft shunt calibration
- ± 5 VDC output
- 12-28 VDC supply
- Contactless data transmission
- Digital electronics
- 10 kHz sample rate
- 16-bit resolution

OPTIONS

- $\pm 0.05\%$ combined error
- Encoder for speed/angle measurement
- Keyed shaft per DIN 6885.1
- Right angle mating connector or cable assembly
- ± 10 VDC output
- RS485 output
- USB output – includes encoder option and display graphing and logging software (replaces ± 5 V output)
- USB Option Available

SOFTWARE FOR USB OPTION

** Allowable without significant effect on measurement and applies to unsupported shaft only

T31, T32, T33, & T34 SPINDLE TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities From 1 - 500 Nm (8.85 - 4.43K lbf-in)
- $\pm 5V$ output (10V option)
- Speeds up to 2000 rpm
- Integrated speed/angle measurement
- Very short axial length
- High torsional stiffness
- Reliable and durable
- Simplifies installation

SPECIFICATIONS

USB OUTPUT OPTION AVAILABLE ON T12, T15, T25 ROTARY TORQUE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Torque, speed & power OR torque = angle
- Display, graph & log
- Up to 2500 measurements/second
- 16-bit resolution
- Peak & valley
- Unit conversion
- Triggered start & stop for automatic event capture
- Automatic scaling of Y-Axis
- Log files are in Excel compatible .csv format
- Supply over USB – no separate power cord
- Configuration & calibration stored in sensor
- Includes software & USB cable

SPECIFICATIONS

USB SPECIFICATIONS	
Output signal – torque	±25,000
Output signal – speed/angle	±32,511
Speed resolution – rpm	1
Angle resolution – degree	0.25
Speed accuracy – %FS	±1
ELECTRICAL	
Sample rate – samples/sec	2500
Supply voltage – VDC	4 - 6 from USB
Supply current – mA	≤ 250
Calibration signal – %FS	100 (software activated)
Electrical connection	PX0446 IP68 Mini B USB – includes 3m (9.8 ft)

T12 SQUARE DRIVE*

T15 HEX DRIVE*

T25*

STANDARD CONFIGURATION

MODEL 2816DYM-10K (Shown)

OPTIONS

- Base (recommended)
- Connector protection
- Standardized output
- Transducer Electronic Data Sheet (TEDS)
- Custom calibration
- Multiple bridge
- Special threads
- Dual diaphragm
- Special temperature range
- Cable length
- Add connector to cable

CONNECTOR OPTIONS

- Integral cable 10 ft (3 m)
- PT02E-10-6P bayonet connector
- PC04E-10-6P screw-type connector

ACCESSORIES

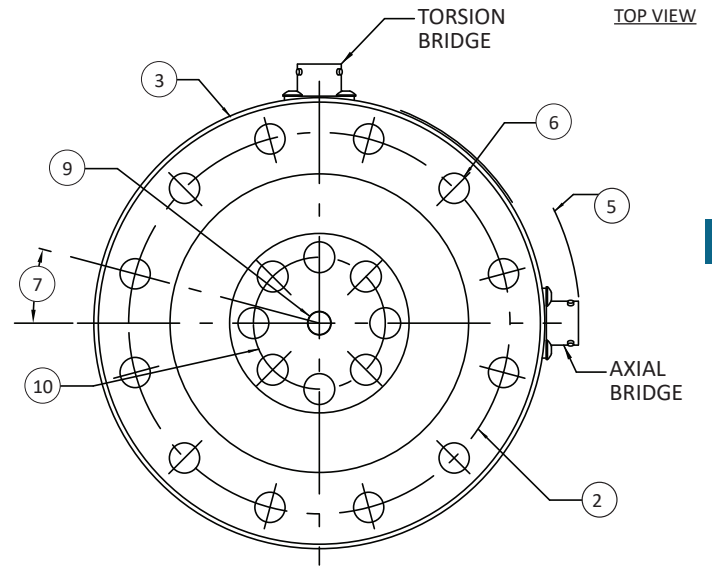

- Mating connector
- Instrumentation
- Loading hardware

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

5200 MULTI-AXIS LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Simultaneously measures thrust and moment perpendicular to the thrust axis
- Thrust axis functions to the same specifications as a Model 1200
- Thrust stiffness and moment stiffness are both very high because of the low profile construction

PERFORMANCE PARAMETERS

Model 5200	RATED THRUST		RATED MOMENT	
	U.S. (lbf)	Metric (kN)	U.S. (lbf-in)	Metric (Nm)

5600 AXIAL TORSION FORCE TRANSDUCER (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities: Force lbf(kN) / Torque lbf-in(Nm) – from 6K(26.7)/5K(565) to 180K(801)/300K(33.9K)
- Measures compressive force and torque
- Low cross talk
- High stiffness
- Extraneous load resistance

STANDARD CONFIGURATION

Model 5611-20K (Shown)

AT101 AXIAL TORSION FORCE & TORQUE TRANSDUCER (U.S. & METRIC)

FLANGE TYPE 1

Model AT101-2/50

FEATURES & BENEFITS

- Capacities: Force kN(lbf) / Torque Nm(lbf-in)-
0.5(112) / 5(44.3), 1(225) / 10(88.5),
1(225) / 30(266), 20(4.5K) / 20(177),
0.5(112) / 50(443), 2(450) / 50(443),
- Measures force & torque in one unit
- Thru-hole

OPTIONS

- 100% Cal Control (Internal Shunt Cal)

STANDARD CONFIGURATION

Model 3A40 (Shown)

FEATURES & BENEFITS

- 3-Axis – Fx Fy Fz; independent bridges
- 2N to 50N force range
- Compact size
- Low crosstalk

Model 3A40 has 3 independent axes in a small package size. Capacities available are 2N, 10N, 20N, and 50N. Product is made from aluminum alloy so it is very light weight.

Interface's 3-axis load cell measures forces simultaneously in 3 mutually perpendicular axes: X, Y, and Z - positive and negative. Each axis provides a unique mV/V output and requires no mathematical manipulation. The 3-axis load cell is built to minimize eccentric loading effects and crosstalk between axes.

The 3A Series 3-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and bio-mechanical). The load cell is provided in various capacity ranges and sizes with each of the three axes providing the same capacity.

We are happy to work with your design needs – providing a custom design if warranted for varying capacities (between X, Y, and Z), higher temperature capability, or OEM/private labeling if needed.

3A SERIES 3-AXIS LOAD CELLS (U.S. & METRIC)

FEATURES & BENEFITS

- 3-Axis – Fx Fy Fz; independent bridges
- 20N to 500kN (4.5 to 112K lbf) force range
- Compact size
- Low crosstalk
- Temperature compensated

Interface's 3-axis load cell measures forces simultaneously in 3 mutually perpendicular axes: X, Y, and Z - tension and compression. Each axis provides a unique mV/V output and requires no mathematical manipulation. The 3-axis load cell is built to minimize eccentric loading effects and crosstalk between axes.

The 3A Series 3-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and bio-mechanical).

The load cell is provided in various capacity ranges and sizes with each of the three axes providing the same capacity.

We are happy to work with your design needs – providing a custom design if warranted for varying capacities (between X, Y, and Z), higher temperature capability, or OEM/private labeling if needed.

Connector		M12, 12-pin

STANDARD CONFIGURATION

Model 3AR100 (Shown)

FEATURES & BENEFITS

- 3-Axis - Fx Fy Fz; independent bridges
- Capacities - 10KN to 500KN
- Compact size
- Low crosstalk
- Temperature compensated
- Optional BSC4A Amplifier can provide scaled analog outputs for all 3 channels simultaneously
- Optional BSC4D PC Interface Module can log, graph and display data for all 3 channels simultaneously

Interface's 3-axis load cell measures forces simultaneously in 3 mutually perpendicular axes: X, Y, and Z - tension and compression. Each axis provides a unique mV/V output and requires no mathematical manipulation. The 3-axis load cell is built to minimize eccentric loading effects and crosstalk between axes.

The 3A Series 3-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and bio-mechanical).

The load cell is provided in various capacity ranges and sizes with each of the three axes providing the same capacity.

We are happy to work with your design needs - providing a custom design if warranted for varying capacities (between X, Y, and Z), higher temperature capability, or OEM/private labeling if needed.

3AR ROUND 3-AXIS LOAD CELL (U.S. & METRIC)

STANDARD CONFIGURATION

Model 3AR100 (Shown)

APPLICATIONS

- Integration into wind tunnel models
- Integration into handles of medical tools
- Sports medicine
- Biomechanics
- Control of assembly and handling processes in micromechanics

CABLE CONNECTION OPTIONS (Included with purchase)

- M12 to 37-Pin D-Sub
- M12 to M16 24-pin
- M12 to 44-pin High Density D-Sub

6A SERIES 6-AXIS STANDARD CAPACITY LOAD CELLS - Fx Fy Fz Mx My Mz (U.S. & METRIC)

FEATURES & BENEFITS

- 6-Axis – force and torque in all six axes
- Capacities: Force N(lbf) / Torque Nm(lbf-in) – 50(11.2)/1(8.85) to 100K(22.48K)/10K(88.51K)
- Compact size
- Force and moment values MUST be calculated using supplied 36-term coefficient matrix
- Low crosstalk
- Temperature compensated
- Optional BX8 amplifier and software can be used for force and moment value calculation

Interface's 6-axis load cell measures forces simultaneously in three mutually perpendicular axes and three simultaneous torques about those same axes. Six full bridges provide mV/V output on six independent channels.

Interface's 6-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and biomechanical).

A 36-term coefficient matrix is included for calculating the load and torque values in each axis.

An 8-channel amplifier with USB PC interface is also available which simplifies data analysis.

6A SERIES 6-AXIS HIGH CAPACITY LOAD CELLS - Fx Fy Fz Mx My Mz (U.S. & METRIC)

FEATURES & BENEFITS

- 6-Axis – force and torque in all six axes
- Capacities: Force N(lbf)/Torque Nm(lbf-in)
 - 50kN(11.2K lbf)/10kNm(88.5K lbf-in)
 - 100kN(22.4K lbf)/15kNm(132.7K lbf-in)
 - 200kN(44.9K lbf)/20kNm(177K lbf-in)
- Nominal Force:
 - Fx: 400kN(89.9K lbf)
 - Fy: 400kN(89.9K lbf)
 - Fz: 800kN(179.8K lbf)
- Nominal Torque:
 - Mx: 40kNm(354K lbf-in)
 - My: 40kNm(354K lbf-in)
 - Mz: 40kNm(354K lbf-in)
- Compact size
- Force and moment values MUST be calculated using supplied 72-term coefficient matrix
- Low crosstalk - <1%
- Temperature compensated
- Optional BX8 amplifier and software can be used for force and moment value calculation

Interface's 6-axis load cell measures forces simultaneously in three mutually perpendicular axes and three simultaneous torques about those same axes. 12 full bridges provide mV/V output on 12 independent channels.

Interface's 6-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and biomechanical).

A 72-term coefficient matrix is included for calculating the load and torque values in each axis. Interface's BX8 Amplifiers including BlueDAQ software greatly simplify the data acquisition process.

6ADF SERIES 6-AXIS DIN FLANGE-TYPE LOAD CELLS - Fx Fy Fz Mx My Mz (U.S. & METRIC)

STANDARD CONFIGURATION

Model 6ADF45 (Shown)

Model 6ADF80 (Shown)

Model 6ADF100 (Shown)

FEATURES & BENEFITS

- 6-Axis – force and torque in all six axes
- Capacities - Force 20N to 1.2kN, Torque 1Nm to 60Nm
- Compact size
- Force and moment values MUST be calculated using supplied 36-term coefficient matrix
- Low crosstalk
- Temperature compensated
- Mounting per DIN EN ISO 9409-1
- Optional BX8 amplifier and software can be used for force and moment value calculation

Interface's 6-axis load cell measures forces simultaneously in three mutually perpendicular axes and three simultaneous torques about those same axes. Six full bridges provide mV/V output on six independent channels.

Interface's 6-axis load cell is ideally suited to many industrial and scientific applications, such as aerospace, robotics, automotive and medical research (orthopedics and biomechanical).

A 36-term coefficient matrix is included for calculating the load and torque values in each axis.

An 8-channel amplifier with USB PC interface is also available which simplifies data analysis.

Load Pins

Standard.....339

Wireless341

LP LOAD PIN (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities range up to 3,000K lbf (1,360 MT)
- Designed to replace pins or bolts that carry a load
- Stainless steel construction
- Used with clevises, or pulley shafts to monitor loads
- Custom designs

Industry applications:

- Tension / Compression Measurements
- Clevis Pin / Shackle Loading
- Sprockets & Pulley Axle
- Crane, Lifting & Winch System
- Mooring Line Tension Measurements
- Hydraulic Systems

Interface Load Pins are made with a dual-shear design and are designed which for center-loading with support from both ends. Interface load pins are strain gage based, the strain gages are installed in the inside-center, neutral axis of the load pin where they are protected from both physical damage and the environment. A full Wheatstone Bridge ensures the best specifications, while the physical design ensures proper alignment and anti-rotation of the application.

OPTIONS

- Integral connector
- Amplification (5VDC, 10VDC, 4-20mA)
- Wireless communication
- Bidirectional loading
- Dual bridge
- ATEX Approval
- High Temperature
- Submersible
- TEDS
- Anti-rotation Plate
- Shackles

WTSLP WIRELESS LOAD PINS (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities range up to 3,000K lbf (1,360 MT)
- Low power consumption for long battery life
- Wireless communication
- 1,969 ft (600 m) range
- Configured and calibrated via PC using a base station and telemetry toolkit
- Compatible with Interface WTS Wireless Products
- Robust, lightweight housing
- Environmentally sealed to IP67

TYPICAL APPLICATIONS

- Crane weighing
- Center of gravity systems
- Vessel weighing
- Platform weighing
- General weighing
- Line Tension

OPTIONS

- Bidirectional loading
- Anti-rotation plate
- Shackles

Compatible with wireless hand-held WTS-BS-1

- 8 digit display
- Fully functional tare capability
- Power-off transmitter from receiver enabled
- IP65 waterproof enclosure 3.5 x 5.9 x 1.4 in (90 x 150 x 35 mm)

COMPATIBLE WITH

ISITL SELF-INDICATING TENSION LINK LOAD CELL (U.S. & METRIC)

DESCRIPTION

The ISITL series have been designed for lifting and weighing in rugged or harsh environments, being manufactured from high tensile aluminum to minimize weight. They are ideal for mobile use (steel brushed holes provide added wear protection from shackles etc).

The ISITL self-indicating tension link load cell is simple to install and is matched to standard shackle sizes. They have a built in display which can be selected by the user to display the applied weight or force in tons, kgs, lbs or kN. There is an in-built audible alarm, which can be set by the operator to warn when an applied weight/force is met.

For applications where the operator is unable to read the display, there is a handheld remote available. This remote replicates exactly all the functionality that is available on the link itself. Other features include peak hold, gross/net and pre-set tare entry. There is also an RS485 digital output available. Interface can also offer a custom software design facility to meet any specific application requirements.

SPECIFICATIONS

Rated Load	MT	1, 2.5, 6.5, 12, 25, 35, 55, 75, 100, 150, 200, 250, 300

Environmental Protection Level		IP65
Material		Aluminum

STANDARD CONFIGURATION

Model ISITL-6.5T (Shown)

OPTIONS

- Remote handheld load cell indicator
- Crosby shackle supply

FEATURES AND BENEFITS

- Ranges from 1 to 300 MT (2.2K to 661K lbf)
- Lightweight aluminum construction
- Shackle holes are steel brushed
- Environmentally sealed to IP65
- Audible alarm facility as standard
- Can display in MT, kg, lb and kN as standard (selectable by operator)
- Peak hold facility

TYPICAL APPLICATIONS

- Under hook crane weighing
- Crane load testing
- Beam proof testing
- Water bag calibration
- Cable tension measurement

OPTIONAL HANDSET

- Push button control
- Tare, units (kg, lbs, kN & metric tons)
- Peak hold
- Preset tare
- Audible set point alarm
- Overload counter

ITL STAINLESS STEEL TENSION LINK LOAD CELL (U.S. & METRIC)

DESCRIPTION

The Interface series ITL Tension Link Load Cell has been designed for lifting and weighing in rugged or harsh environments and is manufactured entirely from stainless steel.

The ITL series products are simple to install and are matched to standard shackle sizes. ITL series tension link load cells are normally supplied with a MIL specification plug and socket, and are environmentally sealed to IP66.

The ITL series can be supplied as shown in this data sheet, or can be modified to meet a particular application requirement. We are always pleased to discuss any special requirements that can be accommodated.

This product can be supplied on its own or combined with our extensive range of instrumentation to provide a complete load monitoring system.

SPECIFICATIONS

STANDARD CONFIGURATION

Model ITL-11K (Shown)

OPTIONS

- Special ranges and sizes available (including high ranges up to 3000K lbf)
- Custom designs
- Can be supplied complete with shackles
- Can be supplied with integral signal conditioning
- Optional carry kit
- Special electrical connectors
- ATEX version available

FEATURES AND BENEFITS

- Range: 11K to 220.4K lbf (5 to 100 mt)
- Stainless steel construction (17-4PH)
- Environmentally sealed to IP66 (IP67 available)

WTS^LT^L LIGHTWEIGHT WIRELESS TENSION LINK (U.S. & METRIC)

DESCRIPTION

The WTS^LT^L series have been designed for lifting and weighing in rugged or harsh environments. Being manufactured from high tensile aluminum to minimize weight also makes them ideal for mobile use (brushed steel holes provide added wear protection from shackles and other applications).

The WTS^LT^L tension link range is simple to install and are matched to standard shackle sizes. They can be supplied complete with a battery powered handheld indicator, which will display the load in MT or lbf (other measurement units are available on request). The handheld indicator is very easy to operate, with just three buttons. One turns the unit

On/Off, one toggles between Gross/Net, and the third allows you to switch units from MT or lbf and vice versa.

The WTS^LT^L can be supplied as a simple load link or as part of a more complex wireless telemetry system. Please contact our application engineers to discuss any specific requirements you may have.

FEATURES AND BENEFITS

- Ranges from 1 to 300 MT (2.2K to 661K lbf)
- Lightweight aluminum construction
- High accuracy
- Environmentally sealed to IP67
- License Free 2.4GHz radio
- Internal antenna
- 1200 hours battery life using standard AA batteries
- Can be supplied with various bespoke telemetry and/or software packages

TYPICAL APPLICATIONS

- Underhook crane weighing
- Cable tension monitoring
- Crane/hoist proof loading
- Water weights calibration
- Warehouse despatch weighing

OPTIONS

- Wireless overload alarm module
- Wireless base station with analogue output
- Wireless signal booster
- Multiple wireless load cell controller software
- Wireless slave display
- Crosby shackle supply

WTSTL WIRELESS STAINLESS STEEL TENSION LINK LOAD CELL (U.S. & METRIC)

FEATURES & BENEFITS

- Capacities from 11K to 220K lbf (5 to 100 MT)
- IP67 environmental protection
- Stainless steel construction
- Simple installation and operation
- Transmission range up to 600 meters (1,968.5 ft)
- Long battery life

OPTIONS

- Larger capacities or sizes
- Compatible with other Interface WTS products
- WTS products support multiple load cell solutions
- Can be supplied complete with shackles
- Lockable storage case

ISHK-B BOW TYPE CROSBY™ CABLED LOAD SHACKLE (U.S. & METRIC)

DESCRIPTION

The Interface range of ISHK-B load shackles are designed for lifting and weighing in rugged or harsh environments, including submersible applications. The shackle pins are forged from high tensile stainless steel to 6.5 MT (14.3K lbf) and high tensile carbon steel from 9.5 MT (20.9K lbf), and are machined to an exacting specification. The basic shackle uses the Crosby G2130 (1 to 25 MT / 2205 to 55.1K lbf), G2140 (40 to 120 MT / 88.2K to 265K lbf) and GN Rope H10 (150 to 1K MT / 331K to 2205K lbf).

This range of load cells are proof loaded to 150% of the normal rated load, and are available in a range from 1 to 1K MT (2205 to 2205K lbf). The integral cable is normally protected by the anti-rotation bracket or by a separate protective plate. The ISHK-B is internally gaged and the whole instrumented area is sealed to IP67 to protect it in service.

They are simple to install and are available in standard shackle sizes. As an option, a rotating bobbin can be supplied to centralize the load and to minimize any point load effects when the shackle is placed under load. We are also always happy to discuss any special requirements that can be accommodated.

The ISHK-B series can be supplied on its own or combined with our extensive range of instrumentation to provide a complete load monitoring package. A wireless version is also available (see WTSSHK-B for details).

TYPICAL APPLICATIONS

- Under-hook hoist/crane weighing
- Cable tension monitoring
- Towing/mooring tension
- Crane safe load monitoring

ISHK-B (Shown)

FEATURES & BENEFITS

- Ranges from 1 to 1K MT (2205 to 2205K lbf)
- High tensile stainless steel construction (to 6.5 MT / 14.3K lbf) and high tensile carbon steel construction (9.5 MT / 20.9K lbf and above)
- Environmentally sealed to IP67
- Simple installation and operation
- Shackle and pin fully certified

OPTIONS

- Special ranges and capacities up to 2K MT (4409K lbf)
- Special electrical connections
- Integral signal conditioning
- Centralizing load bobbin
- Subsea, offshore and ROV friendly versions
- TEDS option
- Wireless version available
- 3.2 material certification
- Submersible
- Amplified output
- ATEX version available

ISHK-B BOW TYPE CROSBY™ CABLED LOAD SHACKLE (U.S. & METRIC)

SPECIAL OPTIONS

Special Ranges			The ISHK-B can be supplied in any range, between 1 and 1K MT (2205 to 2205K lbf) and calibrated as required. Usually we will choose the nearest standard shackle size. We can also offer special design shackles up to 2K MT (4409K lbf). Please contact our design team for more details.
Special Electrical			150 of rated load
Integral Signal Conditioning	Analog Signals	mA (VDC)	4-20 2-wire current output (7.5 to 30 supply)
		VDC (VDC)	4-20 3-wire current output (10 to 30 supply)
		VDC (VDC)	0.1-5.1 3-wire voltage output (8.5 to 28 supply)
		VDC (VDC)	0.1-10.1 3-wire voltage output (13 to 30 supply)
	Digital Signals	(VDC)	RS232 digital – various protocols (5.4 to 18 supply)
		(VDC)	RS485 digital – various protocols (5.4 to 18 supply)
Centralizing Bobbin			We can offer an optional centralizing bobbin. This helps improve the overall load cell accuracy in certain cable tension applications. The bobbin is shown pictorially in the drawing below.
Telemetry			We have a version available that requires no cable connection, using radio telemetry to transmit data. There is a separate data sheet available for this product WTSSHK-B.
Subsea or Offshore			We are able to offer fully submersible versions, which are normally supplied with underwater mateable connectors, making them suitable for use in environmental pressures up to 10,000psi. See below for examples of our submersible load shackles.

ISHK-D 'D' TYPE CROSBY™ CABLED LOAD SHACKLE (U.S. & METRIC)

DESCRIPTION

The Interface range of load shackles is designed for lifting and weighing in rugged or harsh environments. The shackle pins are forged from high tensile alloy steel and are machined to an exacting specification. The basic shackle uses the Crosby G2150 series.

This range of load cells are proof loaded to 150% of the normal rated load, and are available in a range from 1 MT to 35 MT (2.2K to 77.2K lbf). The ISHK-D is internally gaged and the whole instrumented area is sealed to IP67 to protect it in service.

They are simple to install and are available in standard shackle sizes. As an option, a rotating bobbin can be supplied to centralize the load and to minimize any point-load effects when the shackle is placed under load. We are also always happy to discuss any special requirements that can be accommodated.

The ISHK-D series can be supplied on its own or combined with our extensive range of instrumentation to provide a complete load monitoring package.

FEATURES & BENEFITS

- Ranges from 1 to 35 MT (2.2K to 77.2K lbf)
- Environmentally sealed to IP67
- Simple installation and operation
- Shackle and load pin fully certified

ISHK-D (Shown)

TYPICAL APPLICATIONS

- Under-hook hoist/crane weighing
- Cable tension monitoring
- Towing/mooring tension
- Crane safe load monitoring

OPTIONS

- Special ranges and capacities up to 2K MT (4409K lbf)
- Special electrical connections
- Integral signal conditioning
- Centralizing load bobbin
- Subsea and offshore versions
- TEDS option
- ATEX version available

Material	Alloy steel										

SPECIAL OPTIONS

Special Ranges	The ISHK-D can be supplied in any range, between 1 and 35 MT (2.20K to 77.2K lbf) and calibrated as required. Usually we will choose the nearest standard shackle size. We can also offer special design shackles up to 2K MT (4409K lbf). Please contact our design team for more details		
Special Electrical	The standard ISHK-D cable exits the shackle pin via a gland and is restrained using the anti-rotation bracket. We can offer variations to the electrical connection method. For example, integral connectors, special cable length etc.		
Integral Signal Conditioning	Analog Signals	mA (VDC)	4-20 2-wire current output (7.5 to 30 supply)
			4-20 3-wire current output (10 to 30 supply)
		VDC (VDC)	0-5 3-wire voltage output (8.5 to 28 supply)
			0-10 3-wire voltage output (13 to 30 supply)
	Digital Signals	(VDC)	RS232 digital – various protocols (5.4 to 18 supply)
			RS485 digital – various protocols (5.4 to 18 supply)
Centralizing Bobbin	We can offer an optional centralizing bobbin. This helps improve the overall accuracy in certain cable tension applications. The bobbin is shown pictorially in the dimensions drawing.		
Radio Telemetry	We have a version available that requires no cable connection, using radio telemetry to transmit data. There is a separate data sheet available for this product (WTSSHK-D).		
Subsea or Offshore	We are able to offer fully submersible versions, which are normally supplied with underwater mateable connectors, making them suitable for use in environmental pressures up to 10,000psi.

WTSSHK-B WIRELESS CROSBY™ BOW LOAD SHACKLE (U.S. & SHACKLE)

DESCRIPTION

The WTSSHK-B range of telemetry load shackles are manufactured using the Crosby™ G2130 (12 to 15 MT / 26.5K and 33.1K lbf) and G2140 (40 to 120 MT / 88.2K to 265K lbf) shackles. Suitable for use in a wide range of industrial and marine weighing applications, these load shackles are robust, reliable and easy to install.

The unique telemetry housing is manufactured from tough high performance polyamide resin making it strong yet light, resulting in a better balanced load shackle when compared to others available on the market. Two clips enable you to open the housing to access and change the batteries, while the internal electronics underneath remain completely sealed. This includes the antenna to ensure maximum protection from damage. The built in radio telemetry electronics operates on the 2.4GHz license free frequency.

The WTSSHK-B can be supplied as standard with a handheld battery powered display which can toggle between MT or lbs, or alternatively, for multi-shackle applications. A single display can address up to 12 shackles for individual monitoring, or for summation/ weighing applications.

Interface can also supply more complex telemetry systems. For further information on what we can offer, please contact our technical department with details of your application requirements.

WTS-BS-1-HA with WTSSHK-B (Shown)

FEATURES & BENEFITS

- Ranges from 12 to 120 MT (26.5K and 265K lbf)
- Environmentally sealed to IP67
- Simple installation and operation
- Shackle and load pin fully certified

TYPICAL APPLICATIONS

- Under-hook hoist/crane weighing
- Cable tension monitoring
- Towing/mooring tension
- Crane safe load monitoring
- Beam proof loading

OPTIONS

- Special ranges and capacities up to 2K MT (4409K lbf)
- Centralizing load bobbin
- Special telemetry systems available

WTSSHK-B-HL WIRELESS BOW LOAD SHACKLE (U.S. & METRIC)

DESCRIPTION

The WTSSHK-B-HL range of telemetry load shackles are manufactured using the GN rope H10 shackle. Suitable for use in a wide range of industrial and marine heavy lift weighing applications, these load shackles provide a robust and effective method of measuring large tensile loads. They are particularly suited to offshore applications, as they include 3.1 material certification as standard and the proof load test.

The unique telemetry housing is manufactured from tough high performance polyamide resin making it strong yet light, resulting in a better balanced load shackle when compared to others available on the market. Two clips enable you to open the housing to access and change the batteries, while the internal electronics underneath remain completely sealed. This includes the antenna to ensure maximum protection from damage. The built in radio telemetry electronics operates on the 2.4GHz license free frequency.

The WTSSHK-B can also supply as standard with a handheld battery powered display which can toggle between MT or lbs, or alternatively, for multi-shackle applications, a single display can address up to 12 shackles for individual monitoring, or for summation/weighing applications.

Interface can also supply more complex telemetry systems. For further information on what we can offer, please contact our technical department with details of your application requirements.

WTSSHK-B-JR WIRELESS CROSBY™ BOW LOAD SHACKLE (U.S. & METRIC)

DESCRIPTION

The WTSSHK-B-JR range of telemetry load shackles are manufactured using the Crosby™ G2130 shackle. Suitable for use in a wide range of lower capacity industrial weighing applications, these load shackles are accurate, reliable and simple to install. They are particularly popular in theatrical applications for measuring the loads on rigging, hoists and stage lifts.

The IP67 rated telemetry housing is manufactured from ABS plastic making it strong yet light, and the telemetry housing is manufactured from ABS plastic making it strong yet light, and the telemetry electronics contained within are powered by two AA batteries. The unit also features an internal antenna for maximum protection from damage.

The WTSSHK-B-JR can also be supplied with a handheld battery powered display which can toggle between MT or lbs, or alternatively, for multi-shackle applications. A single display can address up to 12 shackles for individual monitoring, or for summation/weighing applications.

Interface can also supply more complex telemetry systems. For further information on what we can offer, please contact our technical department with details of your application requirements.

WTS-BS-1-HA with WTSSHK-B-JR (Shown)

FEATURES & BENEFITS

- Ranges from 3.25 to 9.5 MT (7.17K to 20.9K lbf)
- Environmentally sealed to IP67
- Simple installation and operation
- Shackle and load pin fully certified

TYPICAL APPLICATIONS

- Rigging/hoist monitoring
- Vessel weighing
- Cable tension monitoring
- Lift/stage weighing/monitoring
- Vehicle testing

OPTIONS

- Special ranges and capacities
- Integral signal conditioning
- Special telemetry systems available
- Longer battery life with different transmission rate settings (1 update per second extends battery life to 2000 hours)
- Multiple load cell systems
- Tablet PC option with data logging and other customized features
- Centralizing bobbin
- Amplified output option

WTSSHK-B-JR WIRELESS CROSBY™ BOW LOAD SHACKLE (U.S. & METRIC)

SPECIAL OPTIONS

Special Ranges	The WTSSHK-B-JR can be supplied in any range, between 3.25 and 9.5 MT (7.17K and 20.9K lbf) calibrated as required. Usually we will choose the nearest standard shackle size.
Multi-Shackle Systems	It is possible with the standard handheld telemetry display to use up to 12 shackles with a single handheld. Each shackle is paired with the handheld and can be used to view individual load cells or summated load cells. These values can be sent to a printer or a PC.

WTSSHK-D WIRELESS CROSBY™ LOAD SHACKLE (U.S. & METRIC)

DESCRIPTION

The WTSSHK-D range of telemetry load shackles are manufactured using the Crosby™ G2150 shackles. Versions are also available using the popular GreenPin™ range of shackles. The built in radio telemetry electronics operates on the 2.4GHz license free frequency.

The unique telemetry housing is manufactured from tough high performance polyamide resin making it strong yet light, resulting in a better balanced load shackle when compared to others available on the market. Two clips enable you to open the housing to access and change the two AAA batteries, while the internal electronics underneath remain completely sealed. This includes the antenna to ensure maximum protection from damage.

The WTSSHK-D can also be supplied with a handheld battery powered display which can toggle between MT or lbs, or alternatively, for multi-shackle applications. A single display can address up to 12 shackles for individual monitoring, or for summation/weighing applications.

Interface can also supply more complex telemetry systems. For further information on what we can offer, please contact our technical department with details of your application requirements.

WTS-BS-1-HA with WTSSHK-D (Shown)

FEATURES & BENEFITS

- Ranges from 12 to 35 MT (26.5K to 77.2K lbf)
- Environmentally sealed to IP67
- Simple installation and operation
- Shackle and load pin fully certified

TYPICAL APPLICATIONS

- Under-hook hoist/crane weighing
- Cable tension monitoring
- Towing/mooring tension
- Crane safe load monitoring
- Beam proof loading

OPTIONS

- Special ranges available
- Integral signal conditioning
- Centralizing load bobbin
- Special telemetry systems available
- Amplified output option

SPECIFICATIONS

Rated Load	MT	12	17	25	35
	lbf	26.5K	37.5K	55.1K	77.2K
Proof Load – %	150 of rated load				
Ultimate Breaking Load – %	300 of rated load				
Nonlinearity – %	< ±1 of rated load (typically)				
Nonrepeatability – %	< ±0.1 of rated load				
Transmission Distance	m	Up to 600 (clear line of sight)			
	ft	Up to 1968.5 (clear line of sight)			
Battery Life	>300 hours (continuous use, with 1.2Ah batteries)				
Battery	AAA Alkaline x 2 (supplied with 1.2Ah batteries)				
Operating Temperature Range	°C	-20 to +55			
	°F	-4 to +131			
Environmental Protection Level	IP67				
Telemetry Housing	Polyamide resin				
Weight	kgs	6.5	11	17	23
	lbs	14.3	24.3	37.5	50.7
Resolution	MT	0.01	0.02	0.02	0.05
	lbf	22.0	44.1	44.1	110
Material	Alloy steel				

WTSSHK-D WIRELESS CROSBY™ LOAD SHACKLE (U.S. & METRIC)

SPECIAL OPTIONS

Special Ranges	The WTSSHK-D can be supplied in any range, between 12 and 35 MT (26.5K and 77.2K lbf) and calibrated as required. Usually we will choose the nearest standard shackle size. We can also offer special design shackles up to 2K MT (4409K lbf). Please contact our design team for more details
Centralizing Bobbin	We can offer an optional centralizing bobbin. This helps improve the overall accuracy in certain cable tension applications. The bobbin is shown pictorially in the drawing below.
Multi-Shackle Systems	It is possible with the standard handheld telemetry display to use up to 12 shackles with a single handheld. Each shackle is paired with the handheld and can be used to view individual load cells or summated load cells. These values can be sent to a printer or a PC.

USB Interface Modules	414

480 BIDIRECTIONAL DIGITAL WEIGHT INDICATOR (U.S. & METRIC)

FEATURES & BENEFITS

- Large 0.8 in LED 6-digit display
- 100,000 displayed graduations
- ±523,000 internal counts
- Powers up to 10 load cells
- Tension/Compression operation
- NEMA 4X stainless steel enclosure
- Measurement rate up to 40/sec
- 0.1uV/graduation signal sensitivity

SPECIFICATIONS

ELECTRICAL		
Excitation Voltage – VDC	5, 10 x 350Ω load cells or 20 x 700Ω load cells	
Current – mA @ VAC	70 @115 35 @ 230	
PERFORMANCE		
Maximum Display Counts	±99999	
Internal Resolution Counts	±523,000	
Analog Input Range – mV/V	±5	
Readings Per Second	up to 40 selectable	
Nonlinearity – % FS	0.01	
Sensitivity – uV	to 0.1/graduation min	
ENVIRONMENTAL		
Operating Temperature	°C	-10 to +50
	°F	+14 to +122
Enclosure	NEMA 4X/IP66 stainless steel washdown	
POWER		
AC Power	VAC	115 - 230
	Hz	50 or 60
MECHANICAL		
Weight	kg	
	lbs	8
Display	6 digit LED	
Material	Stainless Steel Enclosure	

OPTIONS

- Analog output, 0-10 VDC, 0-20 mA, 4-20 mA, selection for 20% offset
- Relay output, two digital inputs, four dry contact relays (supports two boards)
- Battery, rechargeable lithium ion power for 18 hours of battery life on one 350 ohm load (LCD current draw vs LED current draw)
- Ethernet TCP/IP and USB interface

920i PROGRAMMABLE WEIGHT INDICATOR/CONTROLLER (U.S. & METRIC)

FEATURES & BENEFITS

- LCD display, (W x H) 4.6 in x 3.4 in
- Selectable character sizes from 0.25 in to 1.2 in
- 60 configurable operator prompts
- Display up to four scale channels per screen with required Legal for Trade information
- 32 scale accumulators
- 5 softkeys with 10 user-defined, 14 preset functions per screen
- 10 programmable display screens
- Millivolt calibration, 5-point linearization and geographical calibration
- NEMA Type 4X/IP66 stainless steel enclosure
- Selectable A/D measurement rate up to 960/second
- 100 setpoints, 30 configurable setpoint types
- 2 slots for option cards
- 1,000-ID truck register for in/out weighing
- 64 K user on-board NV RAM
- User programmable 128 K flash memory
- Reflash memory to upgrade firmware
- Power for 16, 350 ohms load cells per A/D board
- Local-remote indicators
- Multi range/interval
- Audit trail tracking
- Peak hold
- Rate of change

OPTIONS

- Provides streaming ASCII for print, remote display and logging
- Internal mV/V calibration
- USB Interface
- Analog Output: 0-10V and 0-20mA
- Digital I/O, 24-Channel TTL Output
- Ethernet

9840 INTELLIGENT INDICATOR (U.S. & METRIC)

FEATURES & BENEFITS

- TEDS Plug & Play Ready IEEE 1451.4 compliant
- 1 or 2 channel
- Remote sense excitation
- 5 & 6 point linearization
- Bipolar
- ±999,999 display counts
- Nonlinearity < ±0.005%
- Auto setup for multiple load cells
- Fast, direct analog output
- ±10 VDC scalable analog output – 16 bit
- Full duplex RS232C communication
- Peak/valley hold with front panel reset
- Front panel and remote tare
- 8 selectable digital filters
- Auto zero
- Front panel shunt calibration with two selectable resistors
- Display units conversion: Lb, Kg, N, Psi, Mpa, Klb, kN, t, mV/V, lbf-in, oz-in, Nm
- Two-line display
- Quadrature encoder channel available
- mV/V calibration
- USB port

OPTIONS

- TEDS read/write template 33, 40, 41
- 2nd channel
- 2nd 16-bit scalable analog output
- Display Freeze/Remote Display Freeze
- 4-20 mA analog output
- Quad Limits
- RS485
- Multi-drop RS232
- Print Button
- 7-pin circular load cell connector
- Encoder Channel
- Second Line Enable on 1-channel unit
- Keylock

4 CHANNEL 9840-400-1-T INTELLIGENT INDICATOR

FEATURES & BENEFITS

- TEDS Plug & Play Ready! IEE1451.4 compliant
- 4 channel
- Remote sense excitation
- 5 & 6 point linearization
- Bipolar
- ±999,999 display counts
- Nonlinearity < ±0.005%
- Auto setup for multiple load cells
- Fast, direct analog output
- ±10 VDC scalable analog output – 16 bit
- USB 2.0 serial communication
- Peak/valley hold with front panel reset
- Front panel and remote tare
- 8 selectable digital filters
- Auto zero
- Front panel shunt calibration with two selectable resistors
- Display units conversion: Lb, Kg, N, Psi, Mpa, Klb, KN, t, mV/V, lb-in, oz-in, Nm
- (2) Interactive 7" graphical touch screen displays
- Quadrature encoder channel available
- mV/V calibration
- Compatible with Gold Standard® Calibration Systems

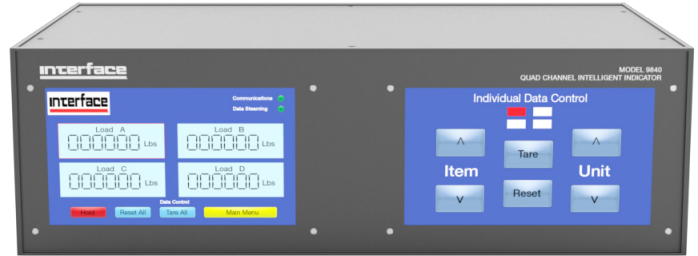

POWER OPTIONS

- 9840-400-1-T 115 VAC
- 9840-400-2-T 230 VAC

OPTIONS

- Up to three additional 16-bit scalable analog outputs
- Display Freeze/Remote Display Freeze
- 4-20 mA analog output
- Quad Limits
- RS485
- Multi-drop RS232
- 7-pin circular load cell connector
- Encoder Channel
- Keylock
- High level input channel

Serial Interface	USB 2.0	
Output – Analog, 16 bit – VDC	Scalable, ±10	
Output – Analog, Direct – Hz	1.5K BW	
Output – Analog – mA	4–20 (optional)	
Limits	Quad-programmable	
PERFORMANCE		
Maximum Display Counts	±999,999	
Display Update / sec.	15 Hz	
Internal Resolution – bits	24	
Signal Input Range – mV/V	±4.5	
Programmable Count – by	1, 2, 5, 10, and 20	
Conversion Rate / sec.	60	
Maximum Error – %FS	0.01 ±1 count	
CMRR – dB	115	
ENVIRONMENTAL		
Operating Temperature	°F	+32 to +122
	°C	0 to +50
Storage Temperature	°F	+14 to +140
	°C	-10 to +60
Relative Humidity – % MAX	°F	95 (104) non-condensing
	°C	95 (40) non-condensing
POWER		
AC Power	110-120VAC/60Hz; 220-240VAC/50Hz	
DC Power (option)	Available as a special	
MECHANICAL		
Dimensions – W x H x D	in	17 x 5.25 x 10 (19 w/L-Brackets)
	mm	431.8 x 133.35 x 254 (482.6 w/L-Brackets)
Weight	lbs	9
	kg	4.08233
Display	(2) Interactive 7" graphical touch screen displays	
Unit Annunciator	Lb, Kg, Klb, kN, N, mV/V, lbf-in, oz-in, Nm	

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

9850 MULTI-CHANNEL INDICATOR (U.S. AND METRIC)

FEATURES & BENEFITS

- High speed - 7800 samples/sec/channel
- Torque, speed, HP, load, angle, position display
- Works with torque sensors, load cells, encoders, LVDTs and speed pickups
- Powers up to 4 load cells
- 5 or 7-pole (based on input type) 200 Hz anti-alias filter plus 4-pole digital filters
- Includes graphical logging software
- RS232, RS422, RS485
- Max/Min capture
- Two-line backlit LCD display
- Math channel for calculated values
- User definable units
- Scalable analog outputs

AVAILABLE INPUT CHANNELS

- AC mV/V
- DC mV/V
- ± 5 or ± 10 VDC
- 4-20 mA current
- Frequency (speed)
- Encoder/totalizer (angle or position)
- LVDT (position)

OPTIONS

- Second transducer channel
- Input type
- DC power
- Panel mount kit

STANDARD CONFIGURATION

9870 HIGH-SPEED HIGH PERFORMANCE TEDS READY INDICATOR (U.S. & METRIC)

FEATURES & BENEFITS

- High Performance Color Graphic LCD Screen
- TEDS Plug and Play
- Sampling and Response Time from 4,000 to 20,000 per second
- Nonlinearity 0.01% Full Scale
- 24 Bit A/D Converter
- Remote Sense Function
- Variety of Hold Functions
- Scalable Analog Output (0-5 VDC, ± 5 VDC, 0-10 VDC, ± 10 VDC, 4-20mA Unipolar)
- Bar Graph, Process Waveform and Visual Alarm Mode Displays

SPECIFICATIONS

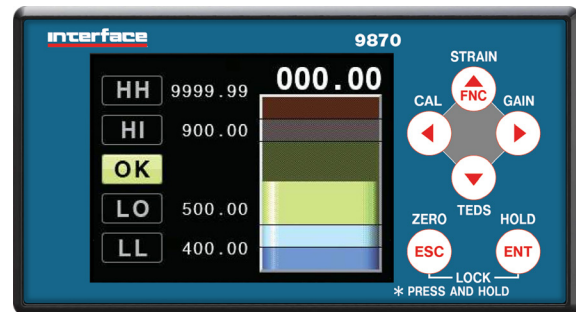

Input Signal Range	Strain gage type transducer ± 5 mV/V	
Excitation Voltage	DC 10V or 2.5V $\pm 10\%$ (Max Current: 30mA, remote sense can be used)	
Calibration Method	Actual load calibration, Equivalent load calibration, TEDS calibration	
ACCURACY		
Non-linearity	0.01% F.S.	
Zero drift	0.5uV/ °C (Input equivalent value)	
Gain drift	$\pm 0.005\%$ F.S. °C	
Analog to Digital Converting Rate	4000 times per sec 20000 times per sec when hold mode selected, 24 bits A/D converter	
Analog Output	\pm Voltage Output 0+1 to 10V 1V step or Current Output 4 to 20 mA Unipolar 4000 Hz	
TEDS Function	Template 33 Read Only Functionality	
DISPLAY		
Display Unit	2.4" (60.96 mm) TFT color LCD	
Display Range	-99999 to 99999	
Display Times	Select 4, 6, 10, 20 times per sec	
Display Mode	Select Normal, Bar meter, Large Indicator Value, Static Strain, Graph	
Hold function (20000 times per sec)	Sample, Peak, Bottom, Peak to Peak, Peak and Bottom, Average *Zone Definition Available except Sample Hold	
Setpoints	Open Collector Output	
ELECTRICAL		
Power	100 - 240 VAC 12W adapter (Included as a standard accessory) 50/60Hz	
ENVIRONMENT		
Operating Temperature	°C	0 to 40
	°F	32 to 104
Storage Temperature	°C	-20 to 60
	°F	-4 to 140
Operating Humidity	85% RH (No condensation)	
MECHANICAL		
Weight	g	300
	oz	10.5

9890 STRAIN GAGE, LOAD CELL, & mV/V INDICATOR (U.S. & METRIC)

FEATURES & BENEFITS

- Large Dual-Line 6-Digit Display, 0.60" & 0.46"
- 0.03% Accuracy
- Peak and valley monitoring
- 24-bit resolution
- USB Port with programming and viewing software
- Powers up to 12 x 350 ohm Sensors
- 32-point linearization
- ±15, ±25, ±150, ±250 mV Bipolar Input Ranges

OPTIONS

- 12-24 VDC Power
- 4-20mA Analog Output
- Internal relays (2 or 4)
- Sunbright display for outdoor use
- RS232 & RS485 serial communication
- Additional external relay module
- Digital I/O expansion module
- Scalable Analog Output 4-20mA

ACCESSORIES

- NEMA 4X Bench Top Enclosure
- Plexiglas bench top tilt stand

BX8-AS INTERFACE BLUEDAQ SERIES DATA ACQUISITION SYSTEM (U.S. & METRIC)

FEATURES & BENEFITS

- 8-Channel synchronized sampling
- Internal calculation of axis load values for 6-axis sensors
- Active scaling of analog outputs according to internal calculations
- $\pm 5V$, $\pm 10V$, 4-20mA, and 0-20 mA outputs
- 48K samples/sec/channel
- 24-bit internal resolution
- USB connection to PC
- Includes graphing and logging software
- Strain gage, mV/V, $\pm 10VDC$, and PT 1000 temperature inputs
- Excitation sense
- Full, $\frac{1}{2}$ and $\frac{1}{4}$ bridge compatible with 120, 350, and 1000 ohm bridge completion
- TEDS compatible
- ZERO button for 8-channel simultaneous tare
- 16 digital I/O
- Galvanic isolation: Analog input, analog output, digital I/O, USB

CSD EMBEDDED LOAD CELL CONVERTER & DIGITIZER MODULE (U.S. & METRIC)

FEATURES & BENEFITS

- Available outputs RS485, Modbus, CANbus, CANopen, and ASCII
- Linearity compensation 2 to 7-points
- 24-bit resolution (18-bit usable)
- Up to 500 samples/second
- Industrial or high stability

SPECIFICATIONS

STANDARD CONFIGURATION

IP67 ENCLOSURE INLINE MODULE (Shown)

LOAD CELL WITH INTEGRATED CSD (Shown)

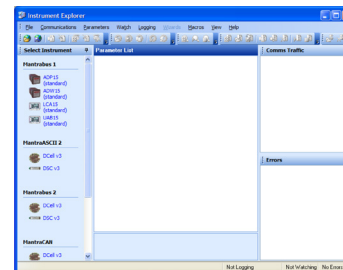

OPTIONS

- Temperature compensation (using optional board and sensor)
- User specified cable lengths
- Special calibration

INCLUDED SOFTWARE

24 Channel Logging
View and log up to 24 channels

Instrument Explorer
Quick setup software event monitoring, data logging, calibration and configuration

INF1 SERIES MODBUS TCP WEIGHT TRANSMITTER AND INDICATOR (U.S. AND METRIC)

FEATURES & BENEFITS

Connection to:

- PLC via analog output or fieldbus
- PC/PLC via RS485 (Up to 99 instruments with line repeaters, up to 32 without line repeaters)
- Remote display via RS485
- 8 load cells in parallel
- Digital Filter to reduce the effects of weight oscillation
- Theoretical calibration and real calibration with the possibility of weight linearization up to 5 points
- Tare weight zero setting
- Automatic zero setting at power on
- Semi-automatic tare (net/gross weight) and predetermined tare
- Semi-automatic zero
- Direct connection between RS485 and RS232 without converter

SPECIFICATIONS

Parameter	
Power Supply and Consumption	12-24 VDC $\pm 10\%$;5W
Number of Load Cells	up to 8 (350 ohm) 4-6 wires
Load Cells Supply	5 VDC/240 mA

Digital Conversion Rate	5 - 300 Hz
3 Relay Logic Outputs	115 VAC/150 mA
2 Optoisolated Logic Inputs	5 - 24 VDC PNP
Serial Ports	RS485
Baud Rate	2400, 4800, 9600, 19200, 38400, 115200 (Bit/s)
Analog Output	16 bit = 65535 Divisions. 0-20 mA; 4-20 mA (Up to 300 ohm) 0-10 V; 0-5 V; ± 10 V; ± 5 V (min 10k ohm)
Maximum Humidity (Condensation Free)	85 %
Storage Temperature	-30 $^{\circ}$ C +80 $^{\circ}$ C
Working Temperature	-20 $^{\circ}$ C +60 $^{\circ}$ C
3 Relay Digital Outputs	30 VAC, 60 VDC/150 mA

STANDARD CONFIGURATION

MODEL INF1-ETHERNET/IP (Shown)

- RS485 serial port for communication via Modbus RTU protocol, ASCII bidirectional or continuous one way transmission
- 3 relay logic outputs controlled by setpoint values or via protocols
- 2 optoisolated PNP logic inputs: status reading via serial communication protocols
- 1 load cell dedicated input
- Back panel mounting on Omega/DIN rail
- Dimensions: 25x115x120 mm
- Six-digit red LED semi-alphanumeric display (8 mm height), 7 segment
- Six indicator LED
- Four buttons for system calibration
- Extractable screw terminal boards

U.S. dimensions and capacities are provided for conversion only. Standard products have International System of Units (SI) capacities and dimensions.

INF1 SERIES MODBUS TCP WEIGHT TRANSMITTER AND INDICATOR (U.S. AND METRIC)

FIELDBUS OPTIONS

Port	Model	Description
	INF1-RS485	RS485 serial port. Baud rate: 2400, 4800, 9600, 19200, 38400, 115200 (bit/s).
	INF1-Analog	Optoisolated 16 bit analog output . Current: 0-20 mA, 4÷20 mA (up to 300 Ω). Voltage: 0-10 V, 0-5 V, ±10 V, ±5 V (min 10 kΩ). Equipped with RS485 serial port.
	INF1-CANopen	CANopen port. Baud rate: 10, 20, 25, 50, 100, 125, 250, 500, 800, 1000 (kbit/s). The instrument works as slave in a synchronous CANopen network. Equipped with RS485 serial port.
	INF1-DeviceNet	DeviceNet port. Baud rate: 125, 250, 500 (kbit/s). The instrument works as slave in a DeviceNet network. Equipped with RS485 serial port.
	INF1-CC-Link	CC-Link port. Baud rate: 156, 625, 2500, 5000, 10000 (kbit/s). The instrument works as Remote Device Station in a CC-Link network and occupies 3 stations. Equipped with RS485 serial port.
	INF1-PROFIBUS DP	PROFIBUS DP port. Baud rate: up to 12 Mbit/s. The instrument works as slave in a Profibus DP network. Equipped with RS485 serial port.
	INF1-Modbus/TCP	Modbus/TCP port. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Modbus/TCP network. Equipped with RS485 serial port.
	INF1-Ethernet TCP/IP	Ethernet TCP/IP port. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works in an Ethernet TCP/IP network and it is accessible via web browser. Equipped with RS485 serial port.
	INF1-Ethernet/IP	2x Ethernet/IP ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as adapter in an Ethernet/IP network. Equipped with RS485 serial port.
	INF1-PROFINET IO	2x PROFINET IO ports. Type: RJ45 100Base-TX. The instrument works as device in a Profinet IO network. Equipped with RS485 serial port.
	INF1-EtherCAT	2x EtherCAT ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in an EtherCAT network. Equipped with RS485 serial port.
	INF1-POWERLINK	2x POWERLINK ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Powerlink network. Equipped with RS485 serial port.
	INF1-SERCOS III	2x SERCOS III ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Sercos III network. Equipped with RS485 serial port.

INF4 SERIES MODBUS TCP WEIGHT TRANSMITTER AND INDICATOR (U.S. AND METRIC)

STANDARD CONFIGURATION

- RS485 serial port for communication via Modbus RTU protocol, ASCII bidirectional or continuous one way transmission.
- 3 relay logic outputs controlled by setpoint values or via protocols.
- 2 optoisolated PNP logic inputs: status reading via serial communication protocols.
- 4 load cell dedicated input.
- Back panel mounting on Omega/DIN rail or front panel (except PROFIBUS DP version) with fixing kit included (panel drilling template 23x96 mm; panel thickness 2.5 mm).
- Dimensions: 26x115x120 mm.
- Six-digit red LED semi-alphanumeric display (8 mm height), 7 segment.
- Six indicator LED.
- Four buttons for system calibration.
- Extractable screw terminal boards.

MODEL INF4-MODBUS/TCP (Shown)

FEATURES & BENEFITS

- 4 independent channels for monitoring and direct management of individual load cells.
- Digital Equalization.
- 4 channel load distribution signaling with archive backups.
- Automatic Diagnostics can make comparisons between recorded values and display an alert if significant variations between the values are detected.
- Event Log archives data in chronological order of the last 50 events related to calibrations, zero settings, errors and equalizations.

Connection to:

- PLC via analog output or fieldbus.
- PC/PLC via RS485 (Up to 99 instruments with line repeaters, up to 32 without line repeaters).
- Remote display via RS485.
- 16 load cells in parallel.
- Digital Filter to reduce the effects of weight oscillation.
- Theoretical calibration and real calibration with the possibility of weight linearization up to 5 points.
- Tare weight zero setting.
- Automatic zero setting at power on.
- Semi-automatic tare (net/gross weight) and predetermined tare.
- Semi-automatic zero.
- Direct connection between RS485 and RS232 without converter.

(2)	120	4.72
(3)	100	3.94
(4)	115	4.53

WITH DIGITAL EQUALIZATION

Digital Equalization

The INF4 does not require the use of a junction box, thanks to the support of 4 independent channels. Furthermore the digital equalizer function simplifies the procedure to a single step and it is free of drift over time.

WITHOUT DIGITAL EQUALIZATION

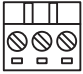

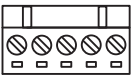

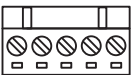

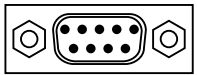

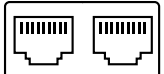

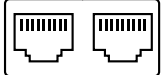

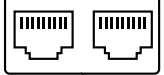

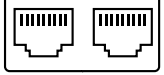

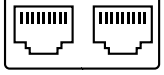

Equalization with Junction Boxes

The equalization procedure with a junction box involves more manual steps and over time it can be susceptible to drift phenomena, requiring further adjustment.

INF4 SERIES MODBUS TCP WEIGHT TRANSMITTER AND INDICATOR (U.S. AND METRIC)

FIELDBUS OPTIONS

Port	Model	Description
	INF4-RS485	RS485 serial port. Baud rate: 2400, 4800, 9600, 19200, 38400, 115200 (bit/s).
	INF4-Analog	Optoisolated 16 bit analog output . Current: 0-20 mA, 4÷20 mA (up to 300 Ω). Voltage: 0-10 V, 0-5 V, ±10 V, ±5 V (min 10 kΩ). Equipped with RS485 serial port.
	INF4-CANopen	CANopen port. Baud rate: 10, 20, 25, 50, 100, 125, 250, 500, 800, 1000 (kbit/s). The instrument works as slave in a synchronous CANopen network. Equipped with RS485 serial port.
	INF4-DeviceNet	DeviceNet port. Baud rate: 125, 250, 500 (kbit/s). The instrument works as slave in a DeviceNet network. Equipped with RS485 serial port.
	INF4-CC-Link	CC-Link port. Baud rate: 156, 625, 2500, 5000, 10000 (kbit/s). The instrument works as Remote Device Station in a CC-Link network and occupies 3 stations. Equipped with RS485 serial port.
	INF4-PROFIBUS DP	PROFIBUS DP port. Baud rate: up to 12 Mbit/s. The instrument works as slave in a Profibus DP network. Equipped with RS485 serial port.
	INF4-Modbus/TCP	Modbus/TCP port. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Modbus/TCP network. Equipped with RS485 serial port.
	INF4-Ethernet TCP/IP	Ethernet TCP/IP port. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works in an Ethernet TCP/IP network and it is accessible via web browser. Equipped with RS485 serial port.
	INF4-Ethernet/IP	2x Ethernet/IP ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as adapter in an Ethernet/IP network. Equipped with RS485 serial port.
	INF4-PROFINET IO	2x PROFINET IO ports. Type: RJ45 100Base-TX. The instrument works as device in a Profinet IO network. Equipped with RS485 serial port.
	INF4-EtherCAT	2x EtherCAT ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in an EtherCAT network. Equipped with RS485 serial port.
	INF4-POWERLINK	2x POWERLINK ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Powerlink network. Equipped with RS485 serial port.
	INF4-SERCOS III	2x SERCOS III ports. Type: RJ45 10Base-T or 100Base-TX (auto-sensing). The instrument works as slave in a Sercos III network. Equipped with RS485 serial port.

JUNCTION BOXES (U.S. & METRIC)

FEATURES & BENEFITS

- A convenient method for wiring multiple load cells to a single indicator
- Commonly used in multi-load cell weighing applications
- Ability to coil excess cable inside the box

The JB104SS junction box model is designed to connect and trim up to four load cells per board. It may also be used in combination with additional junction boxes through the use of an expansion port on the main board to connect multiple junction boxes thus allowing the summing of more than four load cells.

In its most basic form a junction box provides a convenient method for wiring multiple load cells to a single indicator. Junction boxes are commonly used in weighing applications where a tank or scale is supported by more than one load cell. The individual load cell cables are wired into the junction box and then a single cable connects the junction box to the instrumentation.

The JB104SS is a small 4 x 6.5 x 1.75 in (102 x 165 x 44.5 mm) stainless steel NEMA 4 rated box suitable for installations where space is limited. Standard configuration is for up to 4 load cells and provides three trim ranges; no trim, 10% and 30%. Spring clips are used for the load cell connections.

LCT-1 ULTIMATE LOAD CELL TEST INSTRUMENT (U.S. & METRIC)

FEATURES & BENEFITS

- Continuous signal readout provides checking of linearity and repeatability
- User friendly: fully test the load cell without intervention
- Alphanumeric display: 16 x 2 lines
- Rugged ABS enclosure with rubberized over
- Industrial 8-pin screw connector
- Weight: 250 g

The LCT-1 Ultimate provides fast and accurate testing on all load cells to ensure proper operating performance. This instrument is battery-powered and comes with a rubberized enclosure for drop protection. Using 4-AA batteries, it's completely portable and the industrialized connector allows for any 4 or 6 wire load cell to be connected.

PRODUCT DESCRIPTION

The LCT-1 Ultimate is a hand-held device that is specifically designed to fully troubleshoot strain-gage based load cells. It provides several tests that indicate bridge resistance & integrity, overload, and insulation resistance - which can indicate moisture or chemical contamination into the load cell.

SPECIFICATIONS

A/D conversion – bit	16
Bridge test – VDC	1.25
High resistance test – VDC	10
Input and output resistance – Ω	5k at 0.5 resolution & ± 0.5 accuracy
Sense resistance (for 6 wire L/C) – Ω	Up to 500 at 0.1 resolution
Insulation resistance – G Ω – % – M Ω	5 at 10 accuracy (min. >10)
Load cell output in percentage of full scale (input resistance > 175 Ω) – %	± 250 at 0.01 resolution and 0.1 accuracy
Gain adjustment – mv/V	0.1 to 5 in steps of 0.01

DIG-USB & DIG-USB-OEM (U.S. & METRIC)

FEATURES & BENEFITS

- Digital I/O
- High stability
- Peak and valley recording
- OEM PCB version available
- Up to 500 samples/seconds
- Windows driver DLL's available
- Rugged ABS IP50 enclosure (DIG-USB)
- Works with mV/V force and torque devices
- Includes configuration, calibration, graphing, logging, and display software
- Simple and easy to connect to your strain gage sensor
- USB Interface – device appears as virtual com port

Digital USB output modules for load cells, torque transducers and other strain gaged devices

DIG-USB-F & DIG-USB-F-OEM (U.S. & METRIC)

FEATURES & BENEFITS

- Up to 4,800 samples / second
- 13-bit noise-free resolution
- Extremely low temperature drift
- Simple USB 'Plug and Measure' device connects directly to a PC
- Powers up to four 350 ohm load cells
- Works with mV/V force or torque transducer
- Rugged ABS IP50 enclosure (DIG-USB)
- Includes configuration, calibration, graphing, logging and display software
- Peak/valley recording and monitoring
- OEM PCB version available
- Windows driver DLL's available
- Simple and easy to connect to your strain gage sensor
- Ideal for impact, drop, reaction torque, vibration and materials testing

SI-USB4 4 CHANNEL USB INTERFACE MODULE(U.S. & METRIC)

The interface module SI-USB4 is connected between the sensors and PC.

In this way, analog sensor signals will be digitized with up to 16 bit resolution.

By the measuring rate of 5000 measurements/s per measuring channel, high-dynamic measurements can be achieved. The measured values are transferred to a PC via the USB interface and visualized by means of software. If a control signal is integrated in the sensor, an automatic adjustment can be carried out and checked at any time (measuring chain monitoring).

Following sensor output signals can be digitally converted and conveniently displayed and evaluated via the free evaluation software:

- .../Input range ± 4.5 mV/V
(Strain gauges) (Excitation 4V ≤ 20 mA)
- .../Input range ± 5 V/ ± 10 V
(Sensor supply 12V ≤ 80 mA)
- .../Input range 0/4 ... 20 mA
(Sensor supply 12V ≤ 80 mA)
- .../Input range 0 ... 5V
(Linear potentiometer) (Sensor supply +5V ≤ 170 mA)
- .../Input range -200 ... 860 °C
(Temperature probes) (Sensor supply 4V ≤ 20 mA)
- .../Input range 5V TTL
(Quadrature encoder: For (Sensor supply 5V ≤ 85 mA)
torque sensors with speed / angle measurement)

Many standard sensors, such as force, torque, displacement, and pressure sensors, along with linear potentiometers, temperature probes PT100 etc., can be used with the SI-USB4. The sensor parameters can be stored in the SI-USB4. After a single parameterization, each sensor is automatically recognized by the software.

The voltage supply of the SI-USB4 is provided by an external power supply or by a polarity-protected power connection. The connected sensors are directly supplied with voltage through the measuring amplifier which eliminates the need for separate sensor supply voltage.

The low-pass filter 2nd order allows filtration of unwanted frequencies.

Here you can distinguish between 4 cutoff frequencies.

The connection to LabVIEW or integration into own programs is possible with the available driver package.

STANDARD CONFIGURATION

SI-USB4 (Shown)

FEATURES & BENEFITS

- Fast measurement of up to 5000 meas./s per measuring channel
- Input ranges for mV/V, V and mA
- Input ranges for linear potentiometer, temperature probe PT100 and quadrature encoder
- Input ranges combinable with one another
- Digitally switchable analogue input filter
- Full synchronization of all measuring channels
- Adjustment and control signal activation via software
- Shunt Cal

TYPICAL APPLICATIONS

- Mobile test measurements by laptop
- Experimental setups in test laboratories
- Measuring and control devices
- Diagnosis measurements in chemical industries
- PC-based recordings of strain characteristics in biotechnology

OPTIONS

- Adjustment amplifier with simulator

SI-USB4 4 CHANNEL USB INTERFACE MODULE(U.S. & METRIC)

SOFTWARE

The configuration and evaluation software serves for easy evaluation and graphical visualization of the evaluated data on a PC.

The software allows direct read-in of measured data into a text file in CSV-format through the USB port of a PC. This enables further analyses with a commercially available spreadsheet program at any time.

- Windows 7 - 10 32/64 Bit Dual-Core 1.8 GHz
- System includes USB connection to computer and software
- SI-USB includes two mating connectors

TECHNICAL DATA

Type	VS3
Interface	USB
Protocol	Interface Standard Protocol

HIGHLIGHTS AT A GLANCE

Conversion in physical values	✓
Simultaneous measuring	Up to 4 input channels
Automatic scaling of y-Axis	✓
Graphical display of the measured variables	✓
Automated or manual storage in a CSV- and BMP-file	✓
Print-out of the diagram with date and definable superscription	✓
Scaling function of the input variable to any display value with unit	✓
Resettable minimum value memory for each measured value	✓
Resettable maximum value memory for each measured value	✓
Floating averaging	✓
Simple evaluations (OK/NOK)	✓
Tara for each measured Size	✓

WTS-AM-1E WIRELESS STRAIN BRIDGE TRANSMITTER MODULE

The WTS-AM-1E transmitter connects to strain bridge transducers such as load cells, torque sensors, strain gauges and pressure modules and forms part of the WTS modular telemetry system. The data transmitted by the WTS-AM-1E can be received by multiple WTS receivers that include displays, handheld readers, analog outputs, relay modules and computer interfaces.

WTS transmitters have been designed for battery operation and support an ultra low-power sleep mode whilst offering class leading wireless coverage and range. Configurable transmission rates from once per day to 200 per second cope with a wide range of measurement and monitoring applications. A choice of enclosures enabling battery connection, field connectivity and environmental sealing up to IP67 ensure these modules provide a flexible solution to your wireless sensor requirements.

The WTS-AM-1E provides 5 V excitation to drive transducer loads down to 85 ohms. This transmitter is highly accurate, low noise and uses up to nine point linearization giving quality measurements from a wide range of strain bridge transducers.

WTS-AM-1F WIRELESS STRAIN BRIDGE TRANSMITTER MODULE FOR FAST MEASUREMENTS

The WTS-AM-1F transmitter connects to strain bridge transducers such as load cells, torque sensors, strain gauges and pressure modules and forms part of the WTS modular telemetry system. The data transmitted by the WTS-AM-1F can be received by multiple WTS receivers that include handheld readers, analog outputs and computer interfaces.

WTS transmitters have been designed for battery operation and support an ultra low-power sleep mode whilst offering class leading wireless coverage and range. A choice of enclosures enabling battery connection, field connectivity and environmental sealing up to IP67 ensure these modules provide a flexible solution to your wireless sensor requirements.

The WTS-AM-1F is a 2000 samples per second (fixed) version of the WTS-SA for high speed monitoring. WTS-AM-1F provides 5 V excitation to drive transducer loads down to 85 ohms. This transmitter is highly accurate, low noise and outputs in nV/V giving quality measurements from a wide range of strain bridge transducers.

WTS-AM-2 WIRELESS VOLTAGE SENSOR TRANSMITTER

The WTS-AM-2 transmitter module connects to 0-10 V conditioned sensors such as pressure, %RH, inclinometer, accelerometer, depth, vibration, temperature and flow. It forms part of the WTS modular telemetry system. The data transmitted by the WTS-AM-2 can be received by multiple WTS receivers that include displays, handheld readers, analog outputs, relay modules and computer interfaces.

WTS transmitters have been designed for battery operation and support an ultra low-power sleep mode whilst offering class leading wireless coverage and range. Configurable transmission rates from once per day to 200 per second cope with a wide range of measurement and monitoring applications. A choice of enclosures enabling battery connection, field connectivity and environmental sealing up to IP67 ensure these modules provide a flexible solution to your wireless sensor requirements.

The WTS-AM-2 provides 5 V excitation to power external sensors. This transmitter provides up to nine point linearization giving quality measurements from a wide range of sensors.

WTS-BS-3E WIRELESS BASE STATION WITH USB INTERFACE

The WTS-BS-3E is one of a range of base stations that are required for configuration and calibration of the WTS modular telemetry system. Base stations can also be used for data collection systems by making available the WTS wireless transmitter data over the USB interface.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-BS-3E is housed in an IP50 enclosure. On Windows PCs the free WTS Toolkit is used to configure and calibrate the WTS modular telemetry system while the free WTS logging and visualization software allows monitoring and data collection.

STANDARD CONFIGURATION

WTS-BS-3E (Shown)

FEATURES & BENEFITS

- Simple plug & play USB
- Configure & calibrate the WTS range
- Data collection for PC/PLC

WTS-BS-4 WIRELESS BASE STATION WITH USB INTERFACE IN INDUSTRIAL ENCLOSURE

The WTS-BS-4 is one of a range of base stations that are required for configuration and calibration of the WTS modular telemetry system. Base stations can also be used for data collection systems by making available the WTS wireless transmitter data over the USB interface.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage. The WTS-BS-4 is housed in an IP67 enclosure and has better coverage than the WTS-BS-3E.

On Windows PCs the free WTS Toolkit is used to configure and calibrate the WTS modular telemetry system while the free WTS logging and visualization software allows monitoring and data collection.

FEATURES & BENEFITS

- Up to 800 m (2,625 ft) range
- Simple plug & play USB
- Configure & calibrate the WTS range
- IP67/NEMA 4 rated enclosure

WTS-LD1 WIRELESS LARGE LED DISPLAY

The WTS-LD1 provides the user with a large format four-digit display capable of displaying individual WTS transmitter values or the summed value of up to eight modules.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

Using the PC based WTS Toolkit software and a USB base station the user can quickly and easily select and configure the associated transmitter modules. The WTS Toolkit also provides configuration of the display format and zero functions. Further wired Logic Inputs allow the user to remotely control Tare and Net/Gross toggle functions.

FEATURES & BENEFITS

- Large screen with 4-digit, 100 mm (4 in) LED display
- Mounting options: ceiling suspended or wall mounted
- Tare function
- Suitable for crane and weighing applications

WTS-SO WIRELESS INTERFACE WITH ASCII SERIAL OUTPUT

The WTS-SO outputs a user defined ASCII report that can contain live values and sum of up to eight WTS transmitters and forms part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-SO supports RS232 and RS485 connectivity.

The WTS Toolkit software offers a fast and simple way to configure the report format and to choose the associated transmitter modules. The reports could be just a single line giving a value to be fed into a serial display, for example, or could be a multi-line report for delivery to a printer.

FEATURES & BENEFITS

- ASCII serial output
- Serial output to printer, display, PC or PLC
- Simple configuration and calibration
- Wireless range of up to 800 m (up to 2,625 ft)

SPECIFICATIONS

POWER SUPPLY		
Power Supply Voltage – VDC		9 to 32
Supply Current at 12V (typical) – mA		100

WTS-GW1 WIRELESS GATEWAY WITH MODBUS AND ASCII SERIAL OUTPUT

The WTS-GW1 is a gateway that provides a standard serial interface to gather data from up to 100 transmitter modules in a WTS telemetry system using either the Modbus RTU protocol or a simple ASCII protocol.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-GW1 supports RS232 and RS485 connectivity. Some simple commands are available to wake, sleep, and keep awake WTS transmitter modules.

The WTS Toolkit software offers a fast and simple way to configure the gateway module.

FEATURES & BENEFITS

- Can gather data from up to 100 acquisition modules
- Standard communication interface
- Wireless configuration
- Range of up to 800 m (2,625 ft)
- Free software

INDUSTRY SOLUTIONS

- Interface with industrial PLC's
- Simple connection to existing DAQ systems (i.e. LabVIEW or DASyLab)

WTS-BS-1 WIRELESS HANDHELD DISPLAY FOR UNLIMITED TRANSMITTERS

The WTS-BS-1 is a roaming handheld allowing the operator to cycle the display between all available transmitter modules and forms part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-BS-1 does not require pre-configuration of associated transmitters and will wake transmitters as they come within wireless range. Two AA batteries power the handheld which has been designed for low power operation.

The WTS Toolkit software offers a fast and simple way to configure the display format.

FEATURES & BENEFITS

- Roams between transmitters in range
- Sleep / wake
- Auto shutdown
- Rugged construction

WTS-BS-1-HA WIRELESS HANDHELD DISPLAY FOR MULTIPLE TRANSMITTERS

The WTS-BS-1-HA handheld displays data from up to 12 wireless transmitter modules and forms part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analogue outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-BS-1-HA provides either a summed total from all selected transmitters and the ability to view individual transmitters. Two AA batteries power the handheld, which has been designed for low power operation.

The WTS Toolkit software offers a fast and simple way to configure the display format, unit conversion, zero adjustment and transmitter selection. A function key can send the displayed value to other receivers such as a printer.

FEATURES & BENEFITS

- Connect up to 12 transmitters
- Tare function
- Provides summation of up to 12 transmitters
- Sleep/ wake acquisition modules
- Auto shut down
- Rugged construction

WTS-BS-1-HS WIRELESS HANDHELD DISPLAY FOR SINGLE TRANSMITTERS

The WTS-BS-1-HS handheld displays data from any of the WTS wireless transmitter modules and forms part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-BS-1-HS provides a point to point connection to a single transmitter. The transmitter can be woken and sent to sleep as the handheld is turned on or off. Two AA batteries power the handheld which has been designed for low power operation.

The WTS Toolkit software offers a fast and simple way to configure the display format, unit conversion, zero adjustment and transmitter selection.

FEATURES & BENEFITS

- Simple operation
- Connection to single transmitter module
- Tare function
- Auto shutdown
- Rugged construction

WTS-BS-5/DT WIRELESS ANALOG OUTPUT RECEIVER MODULE

The WTS-BS-5 Receiver converts data from a WTS wireless transmitter module into an analogue output and forms part of the WTS modular telemetry system. Data from any of the WTS range of transmitters can be used.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-BS-5 offers, as standard, a user choice of analog outputs; 0-10 V, 4-20 mA, 0-20 mA, ± 10 V, ± 5 V. A choice of a desktop enclosure or an IP67 sealed enclosure allows selection of a module to suit your individual application. The WTS Toolkit offers a fast and simple way to configure the analog output scaled from any engineering unit input.

WTS-AR WIRELESS REPEATER MODULE

The WTS-AR is a repeater which will allow the WTS telemetry system modules to span around obstacles, increase range and coverage by retransmitting received messages.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-AR is housed in an IP67 rated enclosure which accepts two D batteries as well as an external power supply. The repeater enables messages to be repeated once so therefore extends the achievable wireless range. Adding further repeaters to the system will increase coverage but will not further increase the range.

FEATURES & BENEFITS

- Extends and enhances range of WTS devices
- Allows communication around obstacles
- Improves propagation of signal

WTS-RM1 WIRELESS RELAY OUTPUT RECEIVER MODULE

The WTS-RM1 Receiver acts on data from any of the WTS wireless transmitter modules and can be used for alarm and control purposes forming part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimized to give outstanding coverage.

The WTS-RM1 offers two single pole changeover relays with mains rated 5 amp contacts for power switching. Functionality includes set-points, inversion, latching and hysteresis. The WTS Toolkit offers a fast and simple way to configure the relays operation and set-point values, which are entered in the engineering units of the associated transmitter modules.

FEATURES & BENEFITS

- Provides limit switching
- Two relays mains rated
- Accepts up to 16 devices
- Provides a range of relay operation modes
- Loss of signal alarm relay
- Latch and inversion options for all relays

WTS-ANTA / ANTB / ANTC TELEMETRY ANTENNA OPTIONS

The WTS-ANTA, WTS-ANTB and WTS-ANTC can be integrated with any of the WTS modules which are factory fitted with UFL antenna connectors (such as the external antenna options of the acquisition modules e.g. WTS-AM-1, WTS-AM-2, WTS-AM-3). Options also exist for antennas to be fitted to other modules within the WTS range.

The WTS-ANTA is a PCB antenna designed to be fitted inside a plastic enclosure. Cable length 100 mm (4 in) UFL-UFL.

The WTS-ANTB is a whip antenna with a fixed 90 degree elbow designed for mounting externally. Cable length 100 mm (4 in) UFL – Reversed SMA. IP67 rated.

The WTS-ANTC is a whip antenna with a variable angled elbow for mounting externally. Cable length 100 mm (4 in) UFL – Reversed SMA. IP67 rated.

The WTS-ANTD is a 'puck' antenna designed for mounting externally. It is suitable for applications requiring a low physical profile and high gain. Fitted with a 0.6 m (2 ft) cable, RPSMA connector and supplied with a 100 mm (4 in) RPSMA to UFL adaptor cable. IP69K rated.

The WTS-ANTE is a 'puck' antenna designed for mounting externally. It is suitable for applications requiring a low physical profile and high gain. Fitted with a 100 mm (4 in) cable and UFL connector with an environmental rating of IP69K.

FEATURES & BENEFITS

- 4 different versions (PCB, fixed, variable, puck)
- Offers flexibility to OEM installers
- Surface & bulkhead options

WTS-WSS WIRELESS WIND SPEED TRANSMITTER MODULE

The wireless wind speed transmitter module (WTS-WSS) provides high accuracy measurement and offers a quick and effective solution for monitoring wind speeds in a wide variety of applications and industries.

The WTS-WSS uses a low power mode between transmissions to maximize battery life in the field whilst offering class leading wireless coverage range of up to 800 m (2,625 ft).

The Anemometer features a high quality 3-cup rotor in a rugged enclosure, providing rolling average wind speeds between 5 mph to 125 mph. It will also measure gusts at user defined periods of 1, 3, 5, or 10 sec. Wind speed measurement is available in m/s, fps, mph, km/h, or kn.

The device is powered either from internal batteries or an external supply. For applications which require high sampling rates for long periods, Interface's power pack (WTS-PP1) and solar panel (WTS-SP1) offer an ideal solution.

Forming part of the WTS modular telemetry system, the data transmitted by the WTS-WSS can be received by multiple WTS receivers that include displays, handheld readers, analogue outputs, relay modules and computer interfaces.

STANDARD CONFIGURATION

WTS-WSS (Shown)

FEATURES & BENEFITS

- Low power mode providing exceptional battery life in excess of 12 months
- Constantly monitors average wind speed
- Measures gusts at user defined periods
- Quick and simple installation
- Wireless range up to 800 m (2,625 ft)
- Supplied pre-calibrated
- Simple configuration via WTS Toolkit software
- Improved flexible design
- Variable sampling
- Variety of different output units available
- Can be linked to a variety of the WTS peripherals
- Free visualization software also available

WTS-PR1 WIRELESS TELEMETRY PRINTER

The WTS-PR1 is a thermal printer module that can generate a user defined ticket that can contain live values and sum of up to eight WTS transmitters and forms part of the WTS modular telemetry system.

The data sent by transmitter modules can be utilized by multiple receivers such as displays, handheld readers, analog outputs, relay modules and computer interfaces. Receivers support common industrial power supplies with internal antennas optimized to give outstanding coverage.

The printout can be triggered from the arrival of data from a specific module or alternatively by a handheld module. The WTS Toolkit software offers a fast and simple way to configure the ticket format and to choose the associated transmitter modules.

FEATURES & BENEFITS

- Prints screen from the handheld WTS-BS-1-HA
- Simple design (F1 button)
- User definable reports/print outs
- Suitable for vehicle applications

Bluetooth®

BTS Bluetooth® Telemetry System.....455

BTS Bluetooth® TELEMETRY SYSTEM

The BTS-AM-1 is a Bluetooth Low Energy (BLE) strain bridge transmitter module that provides access to high quality measurements on a mobile platform such as a phone or tablet.

The delivery mechanism is BLE which utilizes the flexibility and availability of Bluetooth receivers while maintaining the low power requirements of embedded systems. BTS is built upon two complimentary principles of BLE: 1) broadcast advertising data which enables users to deliver the same data to multiple receivers simultaneously and 2) low power paired connections which can be used in a point to point system.

The BTS comes in two versions:

- Housed in an our 'C' style enclosure with integrated battery holder, which makes it suitable for integration
- Bare board format, which allows the module to be built into OEM applications

FEATURES & BENEFITS

- **High Measurement Resolution:** BTS-AM-1 can produce a noise free resolution of 1 in 92000 counts (16.5 bit) when used with a 3mV/V sensor and 1 in 184,000 counts (17.5 bit) when used with a 6mV/V sensor.
- **Simple Integration into iOS and Android Apps:** Advert format and encoding as well as details on connected services are available to facilitate integration of the device within custom apps for OEM applications.
- **Range:** Ranges achievable between 30 to 90 m line of sight depending on age and quality of viewing device.
- **Advanced Protection:** Configuration PIN, View PIN and Calibration PIN allow you to take control of your end users experience and prevent any unwanted changes in configuration that can compromise measurement quality.

STANDARD CONFIGURATION

MODEL BTS-AM-1 (Shown)

MODEL BTS-OEM-1 (Shown)

BTS MOBILE APP (Shown)

A free iOS and Android app is available for download, which enables users to create dashboards with varying degrees of detail based on application requirements. It enables BTS systems to be visualized on phones and tablets by using digital displays, gages, tanks and charts. Displayed data can be defined as mathematical expressions consisting of readings from multiple transmitters, functions and constants. The app also facilitates BTS module configuration and calibration.

GOLD STANDARD® CALIBRATION SYSTEM (U.S. & METRIC)

FEATURES AND BENEFITS

- Capacities from 55K and 100K lbf
- Less than 0.04% uncertainty
- Fully automated system will reduce calibration time by 50% to 90%
- Automated tension and compression calibration runs can be completed in less than 5 minutes
- 4-post design provides superior stability throughout the calibration
- Innovative fixturing allows for tension and compression calibration without changing setup
- 12 inches of clearance between posts allows for easy load cell installation and removal
- Accurate and reliable load control achieved by proprietary load feedback design
- Testing and reporting per ASTM E74, ISO 376, and EN100002-3 standards
- Automatically produces standard reports, graphs, and performance parameter calculations
- Ability to customize reports and graphs
- Automatically archives data

The Interface Gold Standard® Calibration System using the Interface Gold or Platinum Standard® Load Cells ensures a metrology system of the highest accuracy and lowest uncertainty available.

The Gold Standard® Calibration System includes:

- Precision load frame
- Integrated control and measurement system
- Integrated computer system with Interface Gold Standard® Calibration Software

OPTIONS

- Interface Gold or Platinum Standard® reference load cells
- Thread adapters for easy set-up and use
- Additional input channels for multiple bridge load cells or transducers with high level outputs
- Special threads and calibration adapters
- CX Series Precision mV/V transfer standard for system calibration
- On-site training

SOFTWARE

- Load points can be preset as required per your test specifications
- The ICS-202 Gold Standard® Calibration Software ICS-202 Gold Standard® Calibration Software will provide exact load output at specific load points
- Calibration results from other runs can be compared, measured, and displayed with current run results

Fully Integrated PC-Based Solution for Calibration of Load Cells or Torque Transducers

STANDARD CONFIGURATION

Model GS-SYS03 (Shown)

- Windows software provides flexibility and produces consistent calibration results
- Performs ASTM E74, ISO376, and EN100002-3 calibrations
- Nonlinearity less than 0.005% FS
- Automatically archives test data
- Generates standard reports, graphs, and performance parameter calculations
- Permits easy generation of customized reports and graphics

GOLD STANDARD® LOAD CELL CALIBRATION SYSTEMS

Every new transducer or testing system must be calibrated to determine its properties and accuracy. It is also necessary to recalibrate transducers periodically because of drift, possible undetected damage, and normal wear and tear. The Gold Standard® System is a complete PC-based system for the calibration of load cells and torque transducers. Normally the system is used with a hydraulic load frame which can either be supplied by the user or by Interface. A separate software is available for the calibration of load cells in a deadweight system. Utilizing the experience obtained in almost five decades of force calibration of tens of thousands of load cells, the system provides state-of-the-art accuracy. The system is user-friendly and calibrations can be conducted with minimal training. Pull-down menus and step-by-step instructions are available to guide the operator through a complete calibration.

SYSTEM INCLUDES

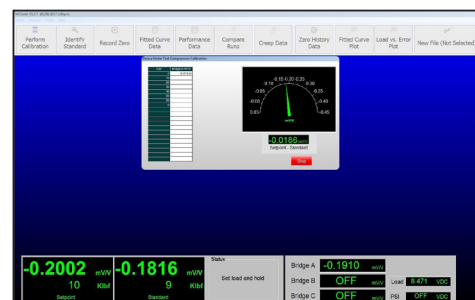

- 9840 Dual Channel 16-bit Intelligent Indicator with 0.005% non-linearity
- Internal mV/V calibration of Model 9840
- ICS-202 Gold Standard® Calibration Software
- Two Gold Standard® interconnect cable assemblies
- CX-0440 ± 4 mV/V transfer standard
- SIS-103 one-day training at Interface Inc.

OPTIONS

- Laptop PC
- CX-0610 or other multi-step mV/V transfer standards
- Gold or Platinum Standard® Calibration Grade Load Cells
- 9840 and software for high level outputs (UDC)
- System calibration software for transducers with indicators

SOFTWARE

- Load points can be preset as required per your test specifications
- The Gold Standard® Calibration Software measures exact load output at specific load points
- Results from earlier runs can be compared, measured, and displayed with current run results

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

GS-SYS04 GOLD STANDARD® PORTABLE E4 MACHINE CALIBRATION SYSTEM

Fully Integrated PC-Based Solution for Machine Calibration

STANDARD CONFIGURATION

Model GS-SYS04 (Shown)

- Windows software provides flexibility and produces consistent calibration results
- Performs ASTM E4 Machine calibrations
- Nonlinearity less than 0.005% FS
- Automatically archives data
- Generates standard reports, graphs, and performance parameter calculations
- Permits easy generation of customized reports and graphs

The Interface Portable E4 Machine Calibration System

The Interface GS-SYS04 Gold Standard® ASTM E4 Machine Calibration integrates our Model 9840 Intelligent Indicator with any Windows-based laptop computer. This solution creates a portable system for in-field calibration of force test machines. This verification involves insertion of a reference load cell (such as the Interface Gold Standard® Load Cell) into the equipment under test. Each data point in the test frame controller is compared against the reading from the reference load cell.

SYSTEM INCLUDES

- 9840 Single Channel 16-bit Intelligent Indicator with 0.005% nonlinearity
- Internal mV/V calibration of Model 9840
- ICS-205 Gold Standard® E4 Machine Calibration Software
- Gold Standard® interconnect cable assembly
- CX-0440 ±4mV/V transfer standard
- SIS-103 one-day training at Interface

OPTIONS

- Laptop PC
- CX-0610 or other multi-step mV/V transfer standards
- Gold or Platinum Standard® Calibration Grade reference standard load cells

SOFTWARE

- Results from other runs can be compared, measured, and displayed with current run results

International System of Units (SI) dimensions and capacities are provided for conversion only. Standard products have U.S. capacities and dimensions. SI capacities available upon special request and at an additional cost.

CX SERIES PRECISION mV/V TRANSFER STANDARD

FEATURES & BENEFITS

Models CX-0202, CX-0610, CX-0440, CS-0330, and CX-0220 are used for setting up and checking the Gold Standard® System Hardware. CX-0440, CX-0330, and CX-0220 are single-step mV/V transfer standards providing precision outputs of ± 4 , ± 3 , and ± 2 mV/V respectively. CX-0610 is a multi-step unit that allows the user to go from -6 mV/V to +6 mV/V in 1 mV/V steps. Model CX-0404 is specifically designed for instrument substitution testing as per ASTM E74.

- Most accurate load cell simulator
- Special low thermal EMF construction
- Each unit individually calibrated, aged and calibrated
- Strong, rugged design
- Instrument substitution testing

Relative to Nominal Value – %	0.01 to 0.05 of setting	0.01 of setting	0.01 of setting	0.01 of setting	0.01 of setting
Relative to Value Provided in Unit-Specific Calibration Chart – %	0.0015 of setting for one year	0.0015 of setting for one year	0.0025 of setting for one year	0.0025 of setting for one year	0.0025 of setting for one year
Temperature Coefficient of Normalized Output – ppm/$^{\circ}$C	< 5 of setting	< 5 of setting	< 5 of setting	< 5 of setting	< 5 of setting
Input and Output Resistance:					
At Zero Setting – ohms %	350 \pm 0.005	350 \pm 0.005	350 \pm 0.005	350 \pm 0.005	350 \pm 0.005
At Output Setting (Value Decreases With Increasing Setting, Either Polarity) – ohms	347.5	347.5	348.5	348.5	348.5

IFVF INTERFACE FORCE VERIFICATION FRAME (U.S. & METRIC)

The Interface Force Verification Frame is a portable high force capacity frame and accessories designed to apply tension and compression forces to load cells with high resolution and accuracy. The system features a reaction frame, manual actuator, thread/adaptor accessories, and optional force sensor(s) and instrumentation. The hardware can be used to verify operation of a device under test or calibrate relative to a second reference load cell.

FEATURES & BENEFITS

- Up to 5,000 lbf capacity. 0.006" per turn High Resolution Actuator
- Portable, Lightweight, and Accurate
- Quick Change Thread Adapters with Adjustment

SPECIFICATIONS

Actuation		Manual, High Resolution, 0.006 in (0.15 mm) per turn 1K via Hand Wheel and 2.5K & 5K via Radial Handles
Force Capacity (Tension and Compression Capability)		IFVF-1K ± 1k lbf Hand Wheel Rotation
		IFVF-2.5K ± 2.5k lbf Handle Rotation
		IFVF-5K ± 5k lbf Handle Rotation
Dimensions	in	8.0 x 9.5 x 20.5
	mm	203.2 x 241.3 x 520.7

A load button may be installed in an INTERFACE universal load cell if it is used as a compression cell with the load applied by a plate or other flat surface.

For compression applications only, an INTERFACE compression load cell should usually be specified. Compression load cells are usually smaller, less expensive and have an integral load button.

MATING CONNECTORS (U.S. & METRIC)

FEATURES & BENEFITS

- Mating connector & cable
- Dressed pigtails
- Interconnects between load cell & instruments

MOUNTING PLATES FOR LOW PROFILE™ LOAD CELLS (U.S. & METRIC)

FEATURES & BENEFITS

- Distributes the load over the foundation of the supporting structure
- Provides a prepared surface for the load cell
- Eliminates the requirement for expansion assemblies in most installations

Mounting Plates for Low Profile™ Load Cells

The installation of a compression load cell under a weigh bridge, tank, or other structure normally requires that mounting plates be used. The bottom plate, ground flat to 0.0002 T.I.R. to mate with the load cell and fabricated of mild steel, distributes the load over the foundation or supporting structure and provides a prepared surface for the load cell.

The top plate distributes the load to the weighing structure and provides a hard (R_c45) surface for the load button. The top plate will move on the button due to thermal expansion, load shifting, wind loading, and other side loads. The high side load capacity of the Interface load cell eliminates the requirement for expansion assemblies in most installations. Mounting plates are suitable for compression loads only; they will not properly support a universal load cell used in tension.

TRANSDUCER ELECTRONIC DATA SHEET (TEDS)

FEATURES & BENEFITS

- Sensor with electronic identification inside
- Meets IEEE 1451.4 standard for smart transducer interface
- Plug & play ready
- Contains sensor information and calibration data
- Available on new or existing sensors
- Eliminates potential for data entry error
- Simplifies & reduces setup
- Makes swapping of load cells easy
- Increases safety by making certain that the system has the correct sensors
- Can be used to identify location of sensors
- Improves inventory control of your sensors
- Sensors can be changed out without jeopardizing integrity of system

STANDARD CONFIGURATION

TEDS CHIP (Shown)

IEEE 1451.4 specifies a table of identifying parameters that are stored in the TEDS (Transducer Electronic Data Sheet) template. This template is on an EEPROM inside the load cell or load cell cable that can be accessed by external electronics.

PLUG & PLAY READY INSTRUMENTS

MODEL 9840 - 100 - 1 - T (Shown)

MODEL 9320 - 1 (Shown)

THREAD ADAPTORS (U.S. & METRIC)

FEATURES & BENEFITS

- Adapts male to female
- Common Interface thread sizes
- Adapts one thread size to another

CABLE SPECIFICATION FOR ABOVE ASSEMBLIES

NOTE: "CT" prefix on cable assembly order numbers is for the most common polarity which is tension upscale. For compression upscale substitute "CC".

"-10" suffix on cable assembly part number is the most common cable length of 10 ft. Other lengths may be ordered by substituting the desired length in feet.

EXAMPLE: For a 20 ft cable to connect to a model 1221HL-50K transducer and have the convention of the green pigtail as + signal for a compression load, order CC-101-20.

**Call factory for more information.*

LOAD CELL TERMS AND DEFINITIONS

This document defines the terminology and performance parameters pertaining to engineering Specifications of load cell products. The objective of this terminology Standard is to promote effective communication of Specifications and to constitute a reference for uniformity. The definitions herein are generally compatible with common understanding in the load cell community and are an expansion of those found in "Load Cell Terminology and Test Procedure Recommendations," Third Edition, 1985, Scale Manufacturers Association, and in OIML International Recommendation R60, 1991 Edition. This document includes modifications to the definitions in the above referenced Standards to correct some of their inconsistencies and inadequacies.

For convenience, terms which are defined in this Standard are printed in upper case when Used in the definition of another term.

AMBIENT Temperature

The Temperature of the medium surrounding the LOAD CELL.

AXIAL LOAD

A load applied along the PRIMARY AXIS.

BAROMETRIC SENSITIVITY

The change in ZERO BALANCE due to a change in ambient barometric pressure. Normally expressed in units of %RO/atm.

CALIBRATION

The comparison of LOAD CELL OUTPUT against Standard test loads.

CAPACITY

The maximum AXIAL LOAD a LOAD CELL is designed to measure within its Specifications.

COMBINED ERROR

The maximum deviation of the CALIBRATION curve from the straight line drawn between MINIMUM LOAD OUTPUT and MAXIMUM LOAD OUTPUT, normally expressed in units of %FS. Both ascending and descending curves are considered.

CREEP

The change in LOAD CELL SIGNAL occurring with time while under load and with all environmental conditions and other variables remaining constant. Normally expressed in units of % of applied load over a specified time interval. It is common for characterization to be measured with a constant load at or near CAPACITY.

CREEP RECOVERY

The change in LOAD CELL SIGNAL occurring with time immediately after removal of a load which had been applied for a specified time interval, environmental conditions and other variables remaining constant during the loaded and unloaded intervals. Normally expressed in units of % of applied load over a specified time interval. Normally the applied interval and the recovery interval are equal. It is common for characterization to be measured with a constant load at or near CAPACITY.

CREEP RETURN

The difference between LOAD CELL SIGNAL immediately after removal of a load which had been applied for a specified time interval, environmental conditions and other variables remaining constant during the loaded interval, and the SIGNAL before application of the load. Normally

expressed in units of % of applied load over a specified time interval. It is common for characterization to be measured with a constant load at or near CAPACITY.

DEFLECTION

The displacement of the point of AXIAL LOAD application in the PRIMARY AXIS between the MDL and MDL+CAPACITY load conditions.

ECCENTRIC LOAD

Any load applied parallel to but not concentric with the PRIMARY AXIS.

FULL SCALE or FS

The OUTPUT corresponding to MAXIMUM LOAD in any specific test or application.

HYSTERESIS

The algebraic difference between OUTPUT at a given load descending from MAXIMUM LOAD and OUTPUT at the same load ascending from MINIMUM LOAD. Normally expressed in units of %FS. It is common for characterization to be measured at 40-60% FS.

INPUT RESISTANCE

The resistance of the LOAD CELL circuit measured at the excitation terminals with no load applied and with the output terminals open-circuited.

INSULATION RESISTANCE

The DC resistance measured between the bridge circuit and the case. Normally measured at 50 VDC.

LOAD CELL

A device which produces an OUTPUT proportional to an applied force load.

MAXIMUM AXIAL LOAD, SAFE

The maximum AXIAL LOAD which can be applied without producing a permanent shift in performance characteristics beyond those specified. Normally expressed in units of % CAPACITY.

MAXIMUM LOAD

The highest load in a specific test or application, which may be any load up to and including CAPACITY + MINIMUM LOAD, but may not exceed CAPACITY significantly.

MAXIMUM AXIAL LOAD, ULTIMATE

The maximum AXIAL LOAD which can be applied without producing a structural failure. Normally expressed in units of % CAPACITY.

LOAD CELL TERMS AND DEFINITIONS

MAXIMUM LOAD AXIS MOMENT, SAFE

The maximum moment with respect to the PRIMARY AXIS which can be applied without producing a permanent shift in performance characteristics beyond those specified.

MAXIMUM MOUNTING TORQUE, SAFE

The maximum torque which can be applied concentric with the primary axis without producing a permanent shift in performance characteristics beyond those specified.

MAXIMUM SIDE LOAD, SAFE

The maximum SIDE LOAD which can be applied without producing a permanent shift in performance characteristics beyond those specified.

MEASURING RANGE

The difference between MAXIMUM LOAD and MINIMUM LOAD in a specific test or application. It may not exceed CAPACITY.

MINIMUM DEAD LOAD or MDL

The smallest load for which specified performance will be met. It is normally equal to or near NO LOAD in single mode applications and is of necessity equal to NO LOAD in double mode applications.

MINIMUM LOAD

The lowest load in a specific test or application, differing from NO LOAD by the weight of fixtures and load receptors which are attached plus any intentional pre-load which is applied.

MODE

The direction of load. Tension & compression are each one mode.

NATURAL FREQUENCY

The frequency of free oscillations under conditions of NO LOAD.

NO LOAD

The condition of the LOAD CELL when in its normal physical orientation, with no force input applied, and with no fixtures or load receptors attached.

NONLINEARITY

The algebraic difference between OUTPUT at a specific load and the corresponding point on the straight line drawn between MINIMUM LOAD and MAXIMUM LOAD. Normally expressed in units of %FS. It is common for characterization to be measured at 40-60 %FS.

NONREPEATABILITY

The maximum difference between OUTPUT readings for repeated loadings under identical loading and environmental conditions. Normally expressed in units of %RO.

OUTPUT

The algebraic difference between the SIGNAL at applied load and the SIGNAL at MINIMUM LOAD.

OUTPUT RESISTANCE

The resistance of the LOAD CELL circuit measured at the SIGNAL terminals with no load applied and with the excitation terminals open-circuited.

PRIMARY AXIS

The axis along which the LOAD CELL is designed to be loaded.

RATED OUTPUT or RO

The OUTPUT corresponding to CAPACITY, equal to the algebraic difference between the SIGNAL at (MINIMUM LOAD + CAPACITY) and the SIGNAL at MINIMUM LOAD.

RESOLUTION

The smallest change in load which produces a detectable change in the SIGNAL.

SHUNT CALIBRATION

Electrical simulation of OUTPUT by connection of shunt resistors of known values at appropriate points in the circuitry.

SIDE LOAD

Any load at the point of AXIAL LOAD application acting at 90° to the PRIMARY AXIS.

SIGNAL

The absolute level of the measurable quantity into which a force input is converted.

SPAN

Another name for RATED OUTPUT.

STATIC ERROR BAND or SEB

The band of maximum deviations of the ascending and descending calibration points from a best fit line through zero OUTPUT. It includes the effects of NONLINEARITY, HYSTERESIS, and non-return to MINIMUM LOAD. Normally expressed in units of %FS.

SEB OUTPUT

A computed value for OUTPUT at CAPACITY derived from a line best fit to the actual ascending and descending calibration points and through zero OUTPUT.

SYMMETRY ERROR

The algebraic difference between the RATED OUTPUT in tension and the average of the absolute values of RATED OUTPUT in tension and RATED OUTPUT in compression. Normally expressed in units of %RO.

Temperature EFFECT ON OUTPUT

The change in OUTPUT due to a change in AMBIENT Temperature. Normally expressed as the slope of a chord spanning the COMPENSATED Temperature RANGE and in units of %/°F or %/100°F.

Temperature EFFECT ON ZERO

The change in ZERO BALANCE due to a change in AMBIENT Temperature. Normally expressed as the slope of a chord spanning the COMPENSATED Temperature RANGE and in units of %RO/°F or %RO/100°F.

LOAD CELL TERMS AND DEFINITIONS

Temperature RANGE, COMPENSATED

The range of Temperature over which the LOAD CELL is compensated to maintain OUTPUT and ZERO BALANCE within specified limits.

Temperature RANGE, OPERATING

The extremes of AMBIENT Temperature within which the LOAD CELL will operate without permanent adverse change to any of its performance characteristics.

TOGGLE

Another name for ZERO FLOAT.

ZERO BALANCE

The SIGNAL of the LOAD CELL in the NO LOAD condition.

ZERO DEAD BAND

Another name for ZERO FLOAT.

ZERO FLOAT

The shift in ZERO BALANCE resulting from a complete cycle of equal tension & compression loads. Normally expressed in units of %FS and Usually characterized at FS = CAPACITY.

ZERO STABILITY

The degree to which ZERO BALANCE is maintained over a specified period of time with all environmental conditions, loading history, and other variables remaining constant.

TROUBLESHOOTING GUIDE FOR LOAD CELLS

1. INTRODUCTION

Performance of a load cell force (or weigh) measurement system is dependent upon the integrity of the physical installation, correct interconnection of the components, proper performance of the basic components which make up the system, and calibration of the system. Presuming that the installation was originally operating and was calibrated, troubleshooting can begin by checking the components individually to determine if they have been damaged or have failed.

The basic components are:

- Load cells
- Mechanical supports and load connections
- Interconnecting cables
- Junction boxes
- Signal conditioning electronics

1.1 MECHANICAL INSTALLATION

Load Cells which are not mounted in accordance with the manufacturer's recommendations may not perform to manufacturer's Specifications. It is always worthwhile to check:

- Mounting surfaces for cleanliness, flatness, and alignment
- Torque of all mounting hardware
- Load cell orientation: "Dead" end on mechanical reference or load forcing source, "live" end connected to the load to be measured. (Dead end is the end closest mechanically to the cable exit or connector.)

Proper hardware (thread sizes, jam nuts, swivels, etc) as required to connect the load to the load cell. A fundamental requirement is that there be one, and only one load path! This load path must be through the load axis of the load cell. This may sound elementary, however it is a commonly overlooked problem.

1.2 Electrical INSTALLATION

Proper load cell performance is also dependent upon the Electrical "system." The following items are common problem areas:

- Loose or dirty Electrical connections, or incorrect connection of color coded wires.
- Failure to make Use of remote sensing of excitation voltage on long cables.
- Incorrect setting of excitation voltage. (The best setting is 10 VDC, because that voltage is used to calibrate the load cell in the factory. The maximum voltage allowed is 15 or 20 volts, depending on the model. Some battery-operated signal conditioners use smaller voltages, down to 1.25 volts, to conserve battery power.)

Loading of the bridge circuit. (Highly accurate load cell systems require highly accurate read-out instruments. Such instruments typically have very high input impedances to avoid circuit loading errors.)

2. LOAD CELL EVALUATIONS

It is quite easy to make a quick diagnostic check of a load cell. The procedure is quite simple and a minimum of equipment is required. Should it be determined that the load cell is at fault, the unit should be returned to the factory for further evaluation and repair as may be required. Many of the checks may be performed with an ohmmeter.

2.1 CHECK BRIDGE CIRCUITRY AND ZERO BALANCE

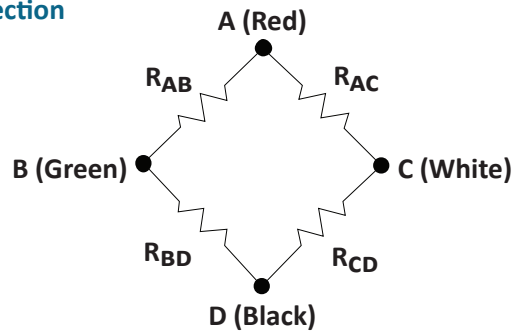

(Numbers apply to Standard 350 ohm bridges.)

- Instrument required: Ohmmeter with 0.1 ohms resolution in the range of 250-400 ohms.
- Bridge Input Resistance: RAD should be 350 ± 3.5 ohms (unless the cell has "Standardized output," in which case the resistance should be less than 390 ohms)

TROUBLESHOOTING GUIDE FOR LOAD CELLS

- Bridge Output Resistance: RBC should be 350 ± 3.5 ohms
- Bridge Leg Resistances: Comparing the leg resistances at no load permits evaluation of the caUse of any permanent damage in the load cell flexure. The “computed unbalance” of the bridge shows the general condition of the cell.
- The computed unbalance, in units of “mV/V,” is determined as follows: $\text{Unbalance} = 1.4 \cdot (\text{RAC} - \text{RAB} + \text{RBD} - \text{RCD})$
- The Zero Offset, in units of “% of Rated Output”, is determined as follows: $\text{Zero Offset} = 100 \cdot \text{Unbalance} \div \text{Rated Output}$

Typical Connection

If the ohmmeter resolution is 0.1 ohm or better, then a computed Zero Offset of greater than 20 percent is a clear indication of overload. A computed zero balance of 10-20% is an indication of probable overload. If the load cell has been overloaded, mechanical damage has been done that is not repairable, becaUse overloading results in permanent deformation within the flexural element and gages, destroying the carefully balanced processing that results in performance to Interface Specifications. While it is possible to Electrically re-zero a load cell following overload, it is not recommended becaUse this does nothing to restore the affected performance parameters or the degradation to structural integrity.

If the degree of overload is not severe the cell may in some cases be Used at the User’s discretion, although some performance parameters may violate Specifications and the cyclic life of the load cell may be reduced.

2.2 INSULATION RESISTANCE TESTS

- Insulation resistance, shield to conductors: Connect all the conductors together, and measure the resistance between all those wires and the shield in the cable.
- Insulation resistance, load cell flexure to conductors: Connect all the conductors together, and measure the resistance between all those wires and the metal body of the load cell.

The tests described above can be performed Using a Standard ohm meter, although best results are obtained with a megohm meter. If resistance is beyond the Standard ohmmeter range, about 10 megohms, the cell is probably OK. However, some kinds of Electrical shorts show up only when Using a megohm meter or with voltages higher than most ohmmeters can supply.

CAUTION:

Never Use a voltage higher than 50 VDC or 35 VRMS AC to measure insulation resistance, or breakdown of the insulation between the gages and the flexure may result. Low resistance (below 5000 megohms) is often caUsed by moisture or pinched wires. The caUse and extent of damage must be established at the factory to determine if the load cell may be salvaged.

3. FACTORY EVALUATION

If the load cell is defective for reasons other than overload, return to factory for detailed evaluation. Factory evaluation may show that the cell is repairable or non-repairable and if repair or replacement will be under warranty. If non-warranty, the Customer will be contacted with the cost of repairs and recalibration, and a delivery date after receipt of authorization to proceed.

LOAD CELLS FATIGUE THEORY

BACKGROUND

Interface has specialized in fatigue-rated load cells and their applications since its founding in 1968. Fatigue rating is a distinct specification which guarantees the Customer a load cell which has a service life of 100 million fully reversed loading cycles at full rated capacity.

The very first products at Interface were fatigue-rated load cells, and over the years a history has been built up by thousands of cells in Use all over the world. Many have been supplied to major manufacturers of materials test machines and to major aerospace manufacturers, for Use in long term structural fatigue test programs on aircraft, space, and automotive equipment. **No fatigue failure of any fatigue-rated Interface load cell, Used within its ratings, has ever been reported.**

FATIGUE FAILURE THEORY

It is well known that metals will fail in a statically loaded situation if the yield strength is exceeded. In as much as load cells are structural members which are stressed in the course of their normal Use, they are commonly given ultimate overload ratings in an effort to characterize the magnitude of static load they will withstand without failing structurally.

However, all metal structures, including load cells, are also subject to failure as a result of repetitive loadings which are much lower than the ultimate overload rating. This phenomenon is known as a fatigue failure, and it is due to the fact that the stress which a metal can withstand under cyclic loading Usually becomes less and less as the number of cyclic loadings is increased.

The cause of this apparent anomaly can be explained by noting that metals are typically not perfectly homogeneous solids. They are composed of crystals, and at locations called grain boundaries, along slip planes or in a region of a microscopic defect there can be minute strains under load which do not completely reverse during unload, leaving the material with a slight plastic deformation at the end of each complete cycle. This effect is highly dependent on the magnitude of the load and the number of cycles.

ANATOMY OF A FATIGUE FAILURE

It is generally acknowledged that a structural fatigue failure develops in three stages:

1. Repeated cycling builds up local plastic deformation, and a microscopic crack is initiated.
2. The crack propagates and a larger section becomes weakened.
3. Stress concentration in the section of cracking increases rapidly, and continued cycling enlarges the crack until sudden fracture occurs.

FATIGUE LIFE PREDICTION

Accurate prediction of fatigue life of any structure is not a reality. Well controlled tests on the most simple configurations of test specimens result in a wide scatter band of results. With complex structures typical of a load cell, analysis is even more complex. Theoretical analysis can produce approximations, however, which can be Useful in estimating the margin of safety at which a particular load cell design is operating.

In materials science, the S-N curve is a well known tool. It is a graphical representation of the number of load cycles required to break a specimen, at a range of peak cyclic stress levels. S-N curves for the high quality materials Used in Interface load cells have been experimentally determined, and are shown in Figure 1 for stainless steel and alloy steel, and in Figure 2 for aluminum alloy.

Thus, if the stress level is known, the fatigue life can be approximately known. However, there are factors which make fatigue life difficult to characterize.

LOAD CELL FATIGUE FAILURE MODES

COMPONENTS SUBJECT TO FAILURE

There are two metal components in a load cell that must be considered in fatigue analysis, the flexure (spring element) and the strain gage (sensor).

1. The flexure bears the load; therefore failure of the flexure is structural.
2. Since the gages function is Electrical measurement of minute deflections, failure of the strain gages, on the other hand, is typically not structural; failure is noted by a shift in resistance or gage factor.

The relative propensity to first encounter flexure or strain gage fatigue failure depends upon the design of the transducer.

LOAD CELLS FATIGUE THEORY

FLEXURES

There are several metals Used for flexures in Interface load cells including aircraft quality alloy steel, stainless steel, and high strength fatigue-resistant aluminum alloy. S-N curves for these three materials are presented in Figure 1 and Figure 2.

Stress is normally expressed in units of psi (pounds per square inch), but for convenience we Use units of Ksi which are equal to 1000 psi. Shear stress is on the vertical axis, corresponding to the state of stress in Low Profile load cells. Readers with some materials science familiarity will recognize that classical fatigue strength for these materials is higher than indicated in the figures. This is because classical data is for bending or direct stress, whereas Interface fatigue-rated cells operate in shear mode. This analysis therefore appropriately Uses the required factor for shear, avoiding a falsely optimistic result.

Note that the shear S-N curve for steel becomes essentially flat at about 55 KSI. This is a characteristic of steel. The stress level at the flat portion of the curve is called the endurance limit. If operated below this limit, theoretically the material will endure an infinite number of load cycles. Nonferrous metals do not generally exhibit an endurance limit, their curves continuing on with a small slope.

GAGES

Fig 1. S-N Curve, Interface Alloy Steel & Stainless Steel

Fig 2. S-N Curve, Interface Aluminum

Interface strain gages are specially made of fatigue-resistant nickel-chromium alloy. Strain gage fatigue characteristics are most conveniently viewed in terms of strain rather than stress. Figure 3 shows a Strain-N curve for Interface strain gage material. Strain is a dimensionless quantity of normally very small magnitude. The microstrain unit is simply 10^{-6} strain units and is Used for convenience. Stress and strain for any particular material are related by a constant which is the modulus of elasticity (30×10^6 for steel and 10×10^6 for aluminum), allowing convenient comparison of S-N curves and Strain-N curves.

Fig 3. S-N Curve, Interface Strain Gages

NOTE:

The curves in Figures 1, 2, and 3 are for fully reversed load cycles, meaning that for 2000 microstrain as an example, a cycle starts at zero load and consists of one load to (+2000), one load to (-2000), with a return to zero.

COMPARISON OF LOADING LEVELS

Superimposed on the curves are operating levels of Interface Low Profile load cells by model series. This provides a convenient visualization of the fact that all of these load cells are designed to have very long, if not infinite, theoretical fatigue lives. Remember that in actual practice things are not necessarily so ideal. Therefore, in order to establish the correlation between theoretical and realizable fatigue life, actual test results are desirable.

LOAD CELLS FATIGUE THEORY

DESIGN VERIFICATION TESTS

TEST PROTOCOL

Interface conducted Design Verification Tests to substantiate the theoretical life predictions by means of actual load tests of the product. Obviously, building up millions of load cycles on a high capacity load cell is not a trivial task. Many hours of costly machine time are required. Tests were conducted on three representative Interface Low Profile load cells: (1) an aluminum cell of 5,500 lbf capacity, (2) a steel cell of 11,000 lbf capacity, and (3) a steel cell of 22,000 lbf capacity.

Loading to 130% of rating was selected as an acceleration factor, to bring down the test time to a realizable length, since 100 million cycles at 1 hertz and 100% loading would consume 3 years and 2 months of testing, 24 hours per day. Based on the slopes of the S-N curves, a cycle acceleration factor of at least 10 can be achieved with 130% loading, thus ensuring that the more stringent test at 107 cycles will prove a fatigue life of 108 cycles at 100% loading.

TEST RESULTS

Analysis of the test data showed that there were no indications of fatigue failure nor degradation of load cell performance outside specified limits, for the critical load cell parameters of output, zero balance, nonlinearity, hysteresis, and creep, during or after completion of the Verification Test program.

BENEFITS OF REDUCED STRESS LEVELS

LOWER STRESS BY DESIGN

Interface load cells are designed for optimum fatigue life. Other load cells are not necessarily equivalent. Table 1 below is a comparison of actual strain levels in Low Profile™ and typical competitive load cells. The safety factors are a means of visualizing the design merit of the various designs. The value of fatigue rated load cells for fatigue applications is evident from the safety factor data. It is also apparent that Interface load cells with 4 mV/V output have lower stress levels and, therefore, more fatigue resistance than competitors' cells, even though their output is only 3 mV/V or less.

LOWER STRESS BY USER LIMITS

Note that the tests and S-N curves are based on fully reversed load cycles. This type of loading cycle is considerably more stringent than unidirectional loading, which is the more common application of load cells. If a fatigue load cell is repeatedly loaded in only one direction, the Goodman Law predicts that it can be loaded to about 133% of the bidirectional fatigue-rated capacity with no degradation of its fatigue rating. Conversely, unidirectional loading to a fatigue cell's rated capacity is much less stressful on the cell than bidirectional loading and can be expected to yield a fatigue life well beyond the number of cycles which could be reasonably and economically applied in a verification test program.

Design Characteristic	Interface 1000 Series (Fatigue)	Interface 1000 Series (Fatigue)	Interface 1100 Series & 1200 Series	Interface 1100, 1200, 3200, 4200, & 4600 Series	Competition Generic Load Cell
	Aluminum	Steel	Aluminum	Steel	Steel
Output, mV/V	1	2	3	4	3
Fatigue Life Rating (Cycles)	10 ⁸	10 ⁸			?
Microstrain at Rated Capacity	450	900	900	1800	1790 (1)
Max Microstrain on Flexure Allowed for 108 Cycle Life	1400	1850	1400	1850	1850
Max Microstrain on Gages Allowed for 108 Cycle Life	2000	2000	2000	2000	1400 (2)
Safety Factor, Flexure (Rotation Allowed / Actual Strain)	3.1	2.1	1.6	1.0	1.0
Safety Factor, Gages (Ratio Allowed / Actual Strain)	4.4	2.2	2.2	1.1	0.8

Table 1. Load Cell Strain and Safety Factor Comparison

NOTE:

- In typical competitors' load cells, the copper-nickel alloy gages have approximately 20% lower Gage Factor than Interface gages and lose approximately 10% of their natural output to Temperature compensation circuitry, a loss which is not present with Interface self-compensated gages. The result is that generic 3 mV/V load cells are stressed about equally with Interface 4 mV/V load cells.*
- Typical copper-nickel alloy gages have approximately 70% of the fatigue resistance of Interface nickel-chromium alloy gages.*

LOAD CELL RESOLUTION

Load cells are constructed Using electric resistance metal foil strain gages bonded to an elastic flexure element. The load cell is a passive analog device with continuous resolution limited ultimately by noise, due to electron motion on the order of 10^{-9} volts (1 nanovolt). Therefore, practically speaking, resolution is limited by the type and quality of the electronic instrumentation Used, rather than by the load cell itself. Many reasonably priced instruments can resolve 0.8 to 1.0 microvolt/count as a minimum signal level.

For example, consider a load cell with Rated Output of 3mV/V. Assume that 10VDC excitation is Used. At Rated Output, the signal level produced would be:

$$3\text{mV/V} \times 10\text{V} = 30\text{ mV}$$

If the indicating instrument can resolve 1 microvolt in the rightmost digit of the display, then:

$$\begin{aligned} \text{Resolution} &= \frac{1\ \mu\text{volt}}{30\ \text{mV}} \\ &= \frac{1\ \mu\text{volt}}{30,000\ \mu\text{volt}} \\ &= 0.000033, \text{ fraction of Rated Output} \\ &= 0.0033\ \% \text{ of Rated Output} \end{aligned}$$

If, for example, an MB-5 (5 lbf Rated Capacity) load cell were being Used, the resolution in pounds could be calculated as:

$$\begin{aligned} \text{Resolution} &= 5\ \text{lbf} \times 0.000033 \\ &= 0.00017\ \text{lbf} \end{aligned}$$

If an instrument capable of 0.5 microvolt resolution were Used, the resolution would be approximately 1 part in 60,000 or 0.000083 pounds for the 5 pound capacity cell. Maximum resolution may be limited by the instrument to the total number of counts that can be displayed.

Another typical example would be the case where only a portion of the range of the load cell is to be Used. If the maximum load on the MB-5 were to be 3 pounds, then the output would be:

$$\begin{aligned} 3\ \text{mV/V} \times 3\ \text{lbf} / 5\ \text{lbf} &= \\ 1.8\ \text{mV/V} & \end{aligned}$$

Using 10V excitation provides a signal of 18 mV output for 3 pounds input. If the instrument displays is to display 30,000 counts a signal strength of

$$\begin{aligned} 18\ \text{mV} / 30,000\ \text{counts} &= \\ 0.6\ \mu\text{volt/count} & \end{aligned}$$

results in a display of 0.00015 pound/count resolution. Of course, the instrument must have a sensitivity of at least 0.6 μ volt/count for this example.

It can be seen from the above examples that the sensitivity and stability of the electronic instrumentation is critical, when high resolution is required. High electronic gain alone will not achieve good results if the zero stability or gain stability is poor because the readings will drift with time or Temperature changes.

Also, keep in mind that excessive resolution can be detrimental in situations where the stability of the applied force is low, as in some hydraulic systems.

Generally, it is desired to read physical units instead of counts. Most instruments provide a count-by feature of 1, 2, 5 or 10 to facilitate this. For the above example, an instrument could be set up to read 30,000 counts by 2 for the 3 pound load, providing resolution of 0.0002 lbf Premium instruments are available that offer as good as 0.001 μ volt/count.

GROUNDING AND SHIELDING IN LOAD CELL INSTALLATIONS

Proper grounding and shielding can be critical to the successful application of load cells generating low level signals. There is no “best way” to set up all systems and the specifics of the installation and associated instrumentation must be considered in arriving at a system configuration that is satisfactory.

The basic rule that should not be violated is that continuous ground loops should be avoided, i.e., a system should not be grounded at multiple points.

This could occur, for example, if the shield of the load cell cable were grounded at both ends.

Interface load cell cables are supplied with a braided shield which provides protection from electrostatic interference when properly grounded. This shield is floating (not connected) at the load cell end so that a “ground loop” will not be inadvertently created.

A basic system layout that is easily achieved and Usually is satisfactory is as follows:

1. The load cell case is grounded by mechanical attachment to the structure to which it is mounted.
2. This structure should be properly grounded to the Electrical circuits which drive the excitation for the load cell.
3. The braided shield enclosing the load cell leads is grounded at the instrument and the instrument is grounded through the power cord.

EXCITATION VOLTAGE

INTRODUCTION

Unless otherwise specified, all Interface load cells are calibrated with an excitation voltage of 10 VDC.

Although Low Profile™ cells may be operated with excitation as high as 20 VDC, and Mini Series cells can be excited with up to 15 VDC, it is always best to operate a load cell at the same voltage Used for the calibration, becaUse certain parameters of the cell are affected by the applied voltage.

The basic construction of a load cell consists of strain gages bonded to a flexure inside the load cell with a very thin layer of an Electrically insulating epoxy. Typically, four gages are connected together in a bridge circuit. When voltage is applied to the bridge, the current through the each gage generates heat, which is conducted through the epoxy into the larger mass of the flexure. Thus, the Temperature of the bridge is always slightly higher than the flexure during normal operation.

GAGE HEATING

Each 350 ohm leg of a bridge will dissipate over 71 milliwatts at 10 VDC excitation. Since power is proportional to the square of the voltage, the leg would be dissipating over a quarter of a watt at 20 VDC, but only 18 milliwatts at 5 VDC.

ZERO BALANCE

Slight differences in the Temperature coefficient of resistance in each leg of a bridge will caUse the zero balance to shift slightly as the gage Temperature changes. The effect is Usually small. For example, a change of excitation from 10.00 VDC to 10.25 VDC will caUse a zero shift of less than 0.0014% of rated output.

SENSITIVITY

The gage factor of each gage is adjusted so as to compensate for the Temperature coefficient of the modulU.S. of the flexure. This matching is exactly valid only at an excitation of 10 VDC. An increase of excitation voltage to 10.25 VDC would lower the bridge sensitivity by only 0.001%, but Use of 20 VDC would caUse the sensitivity of a Low Profile cell to decrease by 0.07%, which could be significant. 20

VDC applied to Mini Series cell would caUse a more serioU.S. effect due to gage heating, and could possibly even shorten the life of the cell.

CREEP

Creep is influenced by Temperature, but the magnitude and direction of the effect of large changes in applied voltage is not predictable.

At room Temperature, changing the applied voltage from 10.00 VDC to 10.25 VDC caUses a negligible effect. However, increasing the voltage on a Low

Profile cell to 20 VDC could caUse the creep to increase (or decrease) by less than 10% of the creep specification.

CONCLU.S.ION

BecaUse of the inherent Temperature stability of the design of Interface load cells, reasonable shifts in excitation voltage will result in paraMetric shifts which would not be detectable in most normal applications.

However, in applications where the load cell is to be Used as a transfer Standard, or where the stability of the cell's characteristics is necessary, precautions should be Used to assure the stability of the excitation voltage.

MOMENT COMPENSATION

Do you know if you have an accurate force reading?

In most applications it is difficult, if not impossible, to calculate or even estimate the effect of misalignments on the precision of a force measurement system. Moment sensitivity introduces errors into force measurements whenever forces cannot be applied precisely on-axis.

The Low Profile™ design by Interface has the intrinsic capability of canceling moment loads because of its radial design.

- The radial flexure beams are precision machined to balance the on-axis loading.
- The gages are precisely placed so that strains due to on-axis loads are additive and strains due to moment loads tend to cancel under actual moment loading.
- Interface Uses eight gages, as opposed to the four used by many manufacturers, which helps to further minimize error from the loads not being perfectly aligned.
- Slight discrepancies between gage outputs are carefully measured and each load cell is adjusted to further reduce extraneous load sensitivity, to meet the specifications in the table below.

RESISTANCE TO EXTRANEOUS LOADS

The INTERFACE Low Profile™ design provides optimum resistance to extraneous loads to insure maximum operation life and minimize reading errors. The above chart tabulates maximum allowable extraneous loads that may be applied singularly without electrical or mechanical damage to the cell and the maximum error that can be expected from side forces or bending moments.

Several loads can be tolerated simultaneously if the total combined load is not more than 100% of the allowable maximum extraneous load.

Only Interface guarantees maximum extraneous load error and physically adjusts every load cell.

The Interface 1200 Series cells have eccentric load sensitivity less than $\pm 0.25\%$ of reading per inch, and the 1000, 1100, and 1600 Series are further adjusted to come in at less than $\pm 0.1\%$ of reading per inch.

Most competing load cells will have extraneous load error ten, or more, times higher than with a superior Interface load cell.

SERIES	S	M	T	MAX ERROR DUE TO S OR M (% RATED RANGE)
	Max Side Force (% Rated Range)	Max Moment (% Rated Range x 1 inch)	Max Moment (% Rated Range x 1 inch)	
1000	100%	100%	100%	0.10%
1100	40%	40%	40%	0.04%
1200	40%	40%	40%	0.10%
1500	40%	40%	40%	0.10%
1600	40%	40%	60 in-lb	0.04%
1800	100%	100%	100%	0.05%

TEMPERATURE COMPENSATION OF ZERO

THE ADVANTAGES OF FULL Temperature RANGE COMPENSATION

Temperature compensation of zero balance of load cells is conventionally performed Using the chordslope method. A partial-range implementation of this method, acting on a chord between room Temperature and one extreme Temperature is often Used. A better implementation is full-range Using three test Temperatures and acts on a chord between the cold and hot extremes.

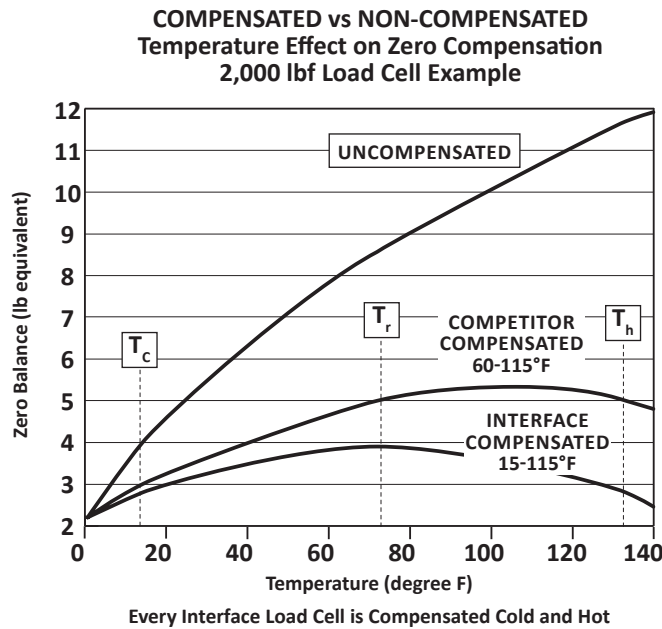

The top curve on the plot represents the zero Temperature characteristics of an uncompensated load cell. This curve would ideally be a straight line but often has some nonlinearity such as shown here.

The objective of the compensation process is to rotate the curve to a more level position. The middle curve represents a compensation based on room Temperature (T_r) and hot Temperature (T_h) and is consequently labeled “r-h compensated.” The process equalizes the zero balance values at T_r and T_h .

The lower curve represents a compensation based on cold Temperature (T_c) and hot Temperature (T_h) and is labeled “c-h compensated.” This process equalizes the zero balance values at T_c and T_h , producing a relatively full-range solution.

It is now apparent why the full range procedure (lower curve) is superior:

1. The slope of the characteristic near room Temperature, the Temperature at which most applications are of most interest, is near zero.
2. The total range of zero balance over the Temperature range of the plot is minimal, approximately one-half that of the partial-range compensated curve in this example.

INSTRUMENT CALIBRATION USING A SHUNT CALIBRATION RESISTOR

INTRODUCTION

Since a strain gage load cell is a passive Electrical device, there exists a simple, yet effective, method for checking the calibration of a load cell system in the field or when a means of applying actual forces is unavailable. Inducing an Electrical imbalance in the cell's bridge circuit will simulate the bridge imbalance caused by the application of actual forces to the load cell. Then the system gain may be adjusted so that the system output signal or display indicates a known force on the load cell.

NOTE:

Be careful not to Use Shunt Calibration as a substitute for actual force calibration of a system. Shunt Calibration merely supplies a known signal to the signal conditioning unit, in order to check its gain or span adjustment.

EQUIVALENT FORCE

On the Calibration Certificate for each Low Profile load cell, Interface routinely supplies the value of the equivalent force resulting from connecting a specified shunt calibration resistor across one leg of the bridge. For other types of cells, Interface will supply shunt calibration values on special request.

SHUNT CALIBRATION CONNECTIONS

The Standard connections Used by Interface for tension & compression shunt calibration are specified on the Calibration Certification for each load cell.

It is important that the Standard connection be Used, although a similar (but not equal) output would result from connecting to the opposite leg of the bridge.

Shunt calibration is relatively insensitive to small changes in Temperature, although the calibration is precisely correct only at the "Lab Standard" conditions noted on the load cell's Calibration Certificate.

RESISTOR VALUES

The following values of shunt resistors will cause an output of approximately 73% of Rated Output for the load cell types indicated when connected across the specified load cell terminals.

For 4 mV/V cells:

RS-100-30K (30,000 ohms, $\pm 0.01\%$)

For 3 mV/V cells:

RS-100-40K (40,000 ohms, $\pm 0.01\%$)

For 2 mV/V cells:

RS-100-60K (60,000 ohms, $\pm 0.01\%$)

For 1 mV/V cells:

RS-100-120K (120,000 ohms, $\pm 0.01\%$)

PROCEDURE

To perform a shunt calibration, Use the following procedure:

1. Remove or stabilize all forces on the load cell.
2. Adjust the display or indicator ZERO to read exactly zero.
3. Connect the shunt calibration resistor to the terminals specified on the Calibration Certificate, and adjust the SPAN or GAIN until the display reads the force value stated on the Certificate.
4. Repeat the procedure to insure a valid calibration.

LOAD CELL PERFORMANCE AS AFFECTED BY CABLE LENGTH

INTRODUCTION

For high accuracy force measurement the effects of the cable on the measurement must be considered.

For constant voltage excitation there are two effects of significance. These are:

1. An effect on the sensitivity due to voltage drops over the cable length.
2. An effect on the thermal span characteristics of the load cell due to the change of cable resistance with Temperature.

CABLE LENGTH EFFECTS

If the load cell is sold with a cable of any length, the sensitivity is determined with the installed cable in calibration and this is not a problem. For load cells with connectors, or if the Customer adds cable himself, there will be a loss of sensitivity of approximately 0.37% per 10 feet of 28 gage cable and .09% per 10 feet of 22 gage cable. This error can be eliminated if a six wire cable is run to the end of the load cell cable or connector and Used in conjunction with an indicator that has sense lead capability.

Temperature EFFECTS

Since cable resistance is a function of Temperature, the cable response to Temperature change affects the thermal span characteristics of the load cell/cable system. For 6-wire systems this effect is eliminated. For 4-wire cables the effect is compensated for in the Standard cable lengths offered with the load cells if the load cell and cable are at the same Temperature at the same time. For non-Standard cable lengths, there will be an effect on thermal span performance. The effect of adding 10 feet of 28 gage cable is to cause a decrease in sensitivity with Temperature equal to 0.0008%/°F (an amount equal to the Standard Interface specification). For an added 10 feet of 22 gage cable the effect is to decrease sensitivity by .0002%/°F (one-fourth Interface spec). In many cases a Customer can tolerate the degraded performance since our Standard specification is extremely tight. However, for long cable runs or high accuracy applications, this can be a significant factor. In such cases, the best approach to the problem is to run six wires to the end of the Standard cable length and sense the excitation voltage at that point. This eliminates the problem.

PROPRIETARY INTERFACE STRAIN GAGES

UNIQUE FORMULATION, MADE IN-HOUSE

Interface load cells are constructed with strain gages manufactured by Interface from a unique proprietary alloy which provides inherently Temperature compensated output. They are manufactured in our facility, in order to provide the necessary strict control of the formulation and the forming process.

MATCHED Temperature CHARACTERISTICS

The Temperature characteristic of the strain gages is adjusted by special processes to exactly match and counteract the Temperature characteristic of the modulus of the load cell structural material, thereby providing output which is relatively Temperature insensitive. The bridge circuit is simple, reliability is high, and changes in output sensitivity caused by Temperature variations are automatically compensated.

By contrast, competitive load cells use strain gage alloys which require the addition of Temperature sensitive resistors in the bridge circuit for compensation, thus reducing reliability. Since the resistors aren't in intimate thermal contact with the cell's flexure, the dynamic thermal performance, resistance to thermal gradients, and thermal response times are also severely affected.

LONGER FATIGUE LIFE

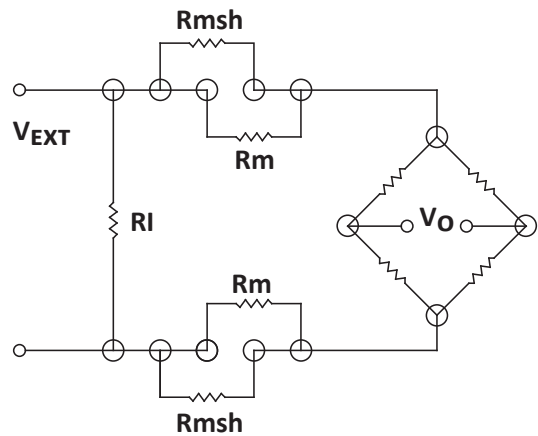

The Interface strain gage alloy provides significantly greater fatigue life than the widely-used constantan gages used by the competition.

HIGHER OUTPUT

A third advantage of the Interface strain gage is higher output, providing higher signal-to-noise ratio and opportunity for higher resolution in precision measurement applications.

INTERFACE LOAD CELL

TYPICAL COMPETITOR'S LOAD CELL

R_m = Modulus compensating resistor

R_{msh} = Fine trim for R_m

R_i = Bridge input resistance trim

WARRANTY AND REPAIR POLICY

WARRANTY

1. Interface warrants that its products shall be free from defects in material and workmanship for the full warranty period under normal and proper Use when correctly installed. The warranty period for most load cells is two years and for other products is one year, from date of shipment by Interface.
2. Any Interface product, which proves defective in material or in workmanship within the warranty period, will be repaired or replaced free of charge provided that the buyer; (1) provides Interface with satisfactory proof of the defect and that the product was properly installed, maintained and operated within the limits of rated and normal Usage; (2) buyer obtains from Interface authorization to return the product; and (3) products claimed to be defective must be returned with transportation charges prepaid, and will be returned to buyer with transportation charges collect unless the item is found to be defective, in which case, Interface will pay the return transportation charges.
3. The remedy set forth herein does not apply to damage to or defects in any product caUsed by the buyer's misUse or neglect, nor does it apply to any product which has been repaired or disassembled which in the sole judgement of Interface affects the performance of the product.
4. Interface makes no warranty concerning components not manufactured by it. However, in the event of the failure of any component or accessory not manufactured by Interface, reasonable assistance will be given to buyer in obtaining from the respective manufacturer whatever adjustment is reasonable based on the manufacturer's own warranty.
5. Interface expressly disclaims any liability to its Customers, dealers, and representatives, and to Users of its products, and to any other person for special or consequential damages of any kind and from any caUse whatsoever arising out of or in any way connected with the manufacture, sale, handling, repair, maintenance, or replacement arising out of or in any way connected with the Use of Interface products.
6. Representations and warranties made by any person, including dealers and representatives of Interface, which are inconsistent or in conflict with the terms of this warranty (including but not limited to the limitations of the liability of, Interface, as set forth above), shall not be binding upon Interface unless reduce to writing and approve by an officer of Interface, Inc.

THIS EXPRESS WARRANTY SUPERCEDES ANY AND ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

OBTAINING SERVICE UNDER WARRANTY

Advance authorization is required before any product is returned to Interface. Prior to the return of any product, write or call the Repair Department at Interface advising them of; (1) a part number; (2) a serial number of the defective product; (3) a technical description of the defect including specific test data, written observations on the failure and specific corrective action required; (4) a no-charge purchase order number (so the product can be returned to sender correctly); and (5) ship and bill addresses. Non-verified problems or defects may be subject to an evaluation charge. Please return the original calibration data with the unit.

REPAIR WARRANTY

All repairs of Interface products are warranted for a period of 90 days from date of shipment. This warranty applies only to those items which were found defective and repaired; it does not apply to products in which no defect was found and returned as is or merely recalibrated. Out of warranty products may not be capable of being returned to the exact original Specifications.

TERMS AND CONDITIONS

The following Terms and Conditions shall apply to any order between Interface Inc., (seller) and buyer, unless overridden by written agreement.

1. ACCEPTANCE

All orders and sales contracts are subject to acceptance or rejection by Interface and are not binding on Interface unless and until so accepted. Acceptance of an order by Interface constitutes a complete and binding contract governed by the terms and conditions of sale expressed herein and by the laws of the state of Arizona. Acceptance is at all time subject to availability for delivery of the goods covered by each order, and prices in effect at the time of shipment, unless otherwise agreed in a separate agreement signed by buyer and Interface.

2. CANCELLATION

In the event of cancellation, buyer will pay promptly upon receipt of invoice from Interface:

- a.) The full contract price for all products which have been completed prior to receipt of notice of cancellation.
- b.) All costs incurred by Interface in connection with the uncompleted portion of the order.
- c.) Cancellation charges incurred by Interface on account of its purchasing commitments made to its suppliers under the order.

4. PATENTS

No license or other rights under any patents, copyrights or trademarks owned or controlled by Interface or under which Interface is licensed are granted to buyer or implied by the sale of products or services hereunder. Buyer shall not identify as genuine products of Interface products purchased hereunder which buyer has modified, or altered in any way nor shall buyer Use Interface's trademarks to identify such products; provided, however, that buyer may identify such products as utilizing, containing, or having been manufactured from genuine products of Interface as modified or altered by buyer or buyer's representative. If products or services sold hereunder are manufactured or performed according to buyer's Specifications, buyer shall indemnify Interface against any liability for patent, copyright or trademark infringement on account of such manufacture or performance.

5. PRICES

Unless otherwise stated, prices are subject to change without notice. No cash discounts or other discounts for prompt payment are offered unless specifically stated on the face thereof. The prices quoted are based upon the manufacture of the quantity and type ordered and are subject to revision when interruptions, engineering changes, or changes in quantity are caUsed or required by buyer. Clerical errors made by Interface are subject to correction.

6. TAXES & OTHER CHARGES

To the extent legally permissible, all present and future excise levies, taxes, or any similar charges imposed by any federal, state, foreign or local authority which Interface may be required to pay or collect, upon or with reference to the sale, purchase, transportation, Use or consumption of products or services, including taxes measured by the receipts therefrom (except net income and franchise taxes), shall be for the account of buyer.

7. DELIVERY

All sales are F.O.B. Interface's Plant. Delivery dates are approximate and estimated, and are based on prompt receipt of all necessary information from buyer. Interface may make partial shipments of any one or more items covered by the quotation or acknowledgment. Interface assumes no liability for loss, damage, or consequential damages due to delays.

8. TERMS OF PAYMENT

All invoices are payable only in U.S. funds. Payment terms are net 30 days. Credit and delivery of products shall be subject to the approval of Interface to whom all bills are payable and who reserves the right to alter the terms and set a limit of credit. Each shipment shall be treated as a separate and independent contract; but if the buyer fails to fulfill the terms of payment under this or any other contract, Interface at its option may defer further shipments, until payment have been made. Invoices that are not paid by the due date are subject to a late charge of 1.5% per month on the unpaid balance.

9. CONFIDENTIAL INFORMATION

Selected software and hardware, drawings, diagrams, manuals, Specifications, and other materials furnished by Interface relating to the Use and service of products furnished hereunder, including any information which may be identified as proprietary to Interface. Such software and hardware, diagrams, manuals, drawings, Specifications and other materials, have been developed at great expense and are considered to be trade secrets to Interface and buyer may not reproduce them in any way without the express written permission of Interface except as needed to operate and maintain the equipment supplied by Interface.

10. DISPUTE RESOLUTION

This agreement and all transactions hereunder are governed by the laws of the state of Arizona.

Bolt Fastening Force and Torque Load Washer and Torque Transducer

Industry: Test and Measurement, Industrial Automation

Summary

Customer Need / Challenge

An Aerospace Company was working on a test plan that involved taking torque & compression measurements on fasteners with varying joint materials. The system required both high and low sampling rates, in addition to the capability of precisely measuring force and torque simultaneously. They required reliable accuracy and long-term stability. The test plan intended to provide verification of required force and torque specifications for fasteners, to ensure safety without compromising installation.

Interface Solution

Using a Model LW or LWCF Load Washer in conjunction with a Model T12 Square Drive Rotary Torque Transducer, the customer was able to align force and torque measurements to desired levels. This was accomplished by combining the sensors with the high sample rate of the data logging and graphing capabilities of the SI-USB, capturing real-time force and torque levels for examination.

Results

The fasteners were tightened to the specified force and torque requirements and were safely installed without impairment to themselves or the joint material. The customer was able to measure the rapid event effectively and accurately.

Materials

- Model LW or LWCF Load Washer.
- Rotary Torque Model T12.
- SI-USB Universal Serial Bus Dual Channel PC Interface Module.

How It Works

1. Interface's Model LW or LWCF Load Washer is installed between the bolt head and nut. The load washer will measure the load as torque is applied to the nut.
2. A Model T12 Square Drive Rotary Torque Transducer is installed in-line with the electric nut runner to measure applied torque within assembly.
3. Real time observation of the applied force and torque is provided by mating LW or LWCF Load Washer and Rotary Torque Transducer in parallel with SI-USB 2-Channel PC Interface Module.
4. Accompanying software of Instrumentation enables customer logging and graphing of data. Excel compatible file then allows for further manipulation and analysis of this data.
5. Ultimately, the LW or LWCF Load Washer, Rotary Torque Transducer, and SI-USB Data Logging Instrumentation configuration offers End-user capability to accurately monitor applied load and rotational torque of tightened fasteners.

Bolt Fastening-Force Load Washer

Industry: Industrial Automation, Test and Measurement

Summary

Customer Need / Challenge	Interface Solution	Results
Over-tightening bolts during installation can cause damage to the objects being installed.	Using Interface Model LWCF Load Washers along with Interface Instrumentation can provide a solution that monitors the force being applied during bolt tightening.	Bolts are tightened to the correct force targets and objects are installed undamaged.

Materials

- Model LWCF Load Washer
- Model INF-USB3 PC Interface Module which comes with logging and graphing software
- Customer supplied bolt and nut

How It Works

1. Model LWCF Load Washer is installed between the bolt head and nut. The load washer will measure the load as torque is applied to the nut.
2. Using Model INF-USB3 PC Module, force readings from the load cell will be displayed, logged, and graphed directly into the PC.

Parachute Deployment & Deceleration Testing

Load Cell

Industry: Aerospace, Industrial Automation

Summary

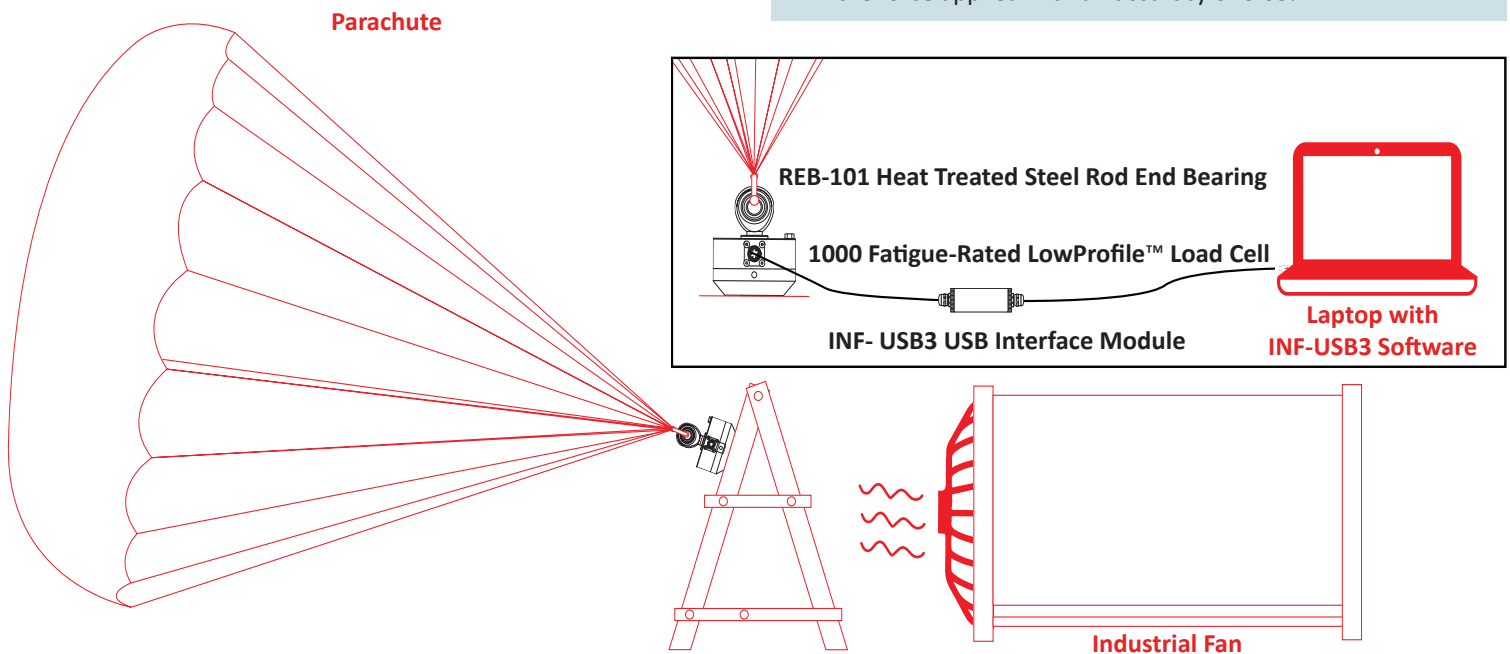

Customer Need / Challenge	Interface Solution	Results
Spacecraft landing on a lunar or planetary surface require parachutes to deploy at high speeds under high loads. For example, NASA tested the Mars Science Laboratory parachute in an 80x120-foot wind tunnel at 80 mph speeds and loads up to 85,000 pounds.	A 1000-series fatigue-rated LowProfile™ load cells with eccentric load compensation is employed to sustain and measure high loads with 300% overload protection.	Load cells ensure accurate measurement of applied loads during parachute deployment testing. Multiple tests allow engineers to test various parachute packing techniques.

Materials

- 1000 Fatigue-Rated LowProfile™ Load Cells capacity up to 50K pounds-force (lbf).
- REB-101 Heat Treated Steel Rod End Bearing.
- INF-USB3 USB Interface Module.

How It Works

1. Support structure capable of sustaining required loads is built inside wind tunnel.
2. A single load cell is installed as part of the support structure and connected to the parachute deployment system.
3. After the wind tunnel is brought up to speed, a mortar launches the parachute, aiming toward the upper middle portion of the tunnel where speeds are highest.
4. As the parachute canopy deploys, the load cell(s) measure the force applied with an accuracy of 0.03%.

Reduced Gravity Simulation Load Cell

Industry: Aerospace

Summary

Customer Need / Challenge

Develop a system to provide a full range of natural motion for a realistic simulation of reduced gravity environments. The system can simulate future missions to the moon, mars, asteroids, or any other celestial destination. The simulated weightlessness can train crew how to handle a wide range of microgravity activities, including walking, running, and jumping. The system can also be used for surface operation studies, suit and vehicle development, robotic development, and mass handling studies.

Interface Solution

Model 1100 series load cell is installed in-line with a steel support cable to actively measure the vertical load on the system. A control system, (which includes model 9860 High Speed Digital Indicator), monitors the load cell output and continuously offloads a portion of a human or robotic payload weight during all dynamic motions.

Results

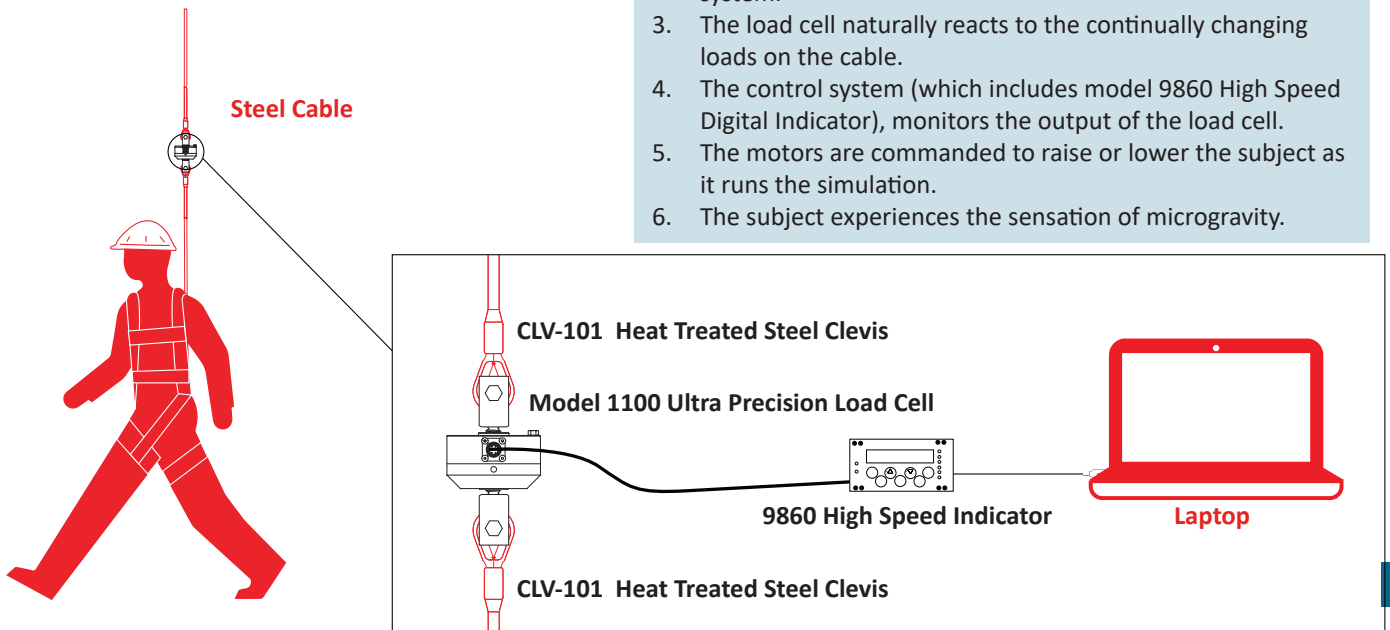

Using the precise feedback from the load cell, the control system is able to command a motor to raise or lower the subject to maintain a constant offload force. During the simulation, the system actively compensates for the movement of the subject to accurately reproduce a microgravity environment.

Materials

- Model 1100 Ultra Precision Load Cell.
- CLV-101 Heat Treated Steel Clevis.
- Model 9860 High Speed Digital Indicator.

How It Works

1. The 1100 series load cell is installed in the vertical axis steel cable.
2. The subject and simulation exercise are loaded into to system.
3. The load cell naturally reacts to the continually changing loads on the cable.
4. The control system (which includes model 9860 High Speed Digital Indicator), monitors the output of the load cell.
5. The motors are commanded to raise or lower the subject as it runs the simulation.
6. The subject experiences the sensation of microgravity.

Rocket Structural Testing Load Cell

Industry: Aerospace

Summary

Customer Need / Challenge

NASA's Space Launch System (SLS) core stage will be the largest ever built at 27 feet in diameter and 200+ feet tall. Core components including liquid hydrogen and oxygen tanks must withstand launch loads up to 9 million pounds-force (lbf).

Interface Solution

Interface load cells attached to hydraulic cylinders at various locations along test stands to provide precise test forces. Strain gages bonded to rocket structure surface and connected to data acquisition system for stress analysis.

Results

Engineers are able to measure loads applied at various areas on the rocket structure, verifying the structural performance under simulated launch conditions.

Materials

- 1200 High Capacity Standard Precision Low-Profile™ Load Cell Model 1260 for 600,000 lbf capacity.
- 1200 High Capacity Standard Precision LowProfile™ Load Cell Model 1280 for 1,000,000 lbf capacity.
- 1200 High Capacity Standard Precision LowProfile™ Load Cell Model 1290 for 2,000,000 lbf capacity.

How It Works

1. Marshall Space Flight Center in Huntsville, Alabama built a 215-foot twin tower static test stand to test the 185-foot hydrogen tank. A second 85-foot test stand was built to test oxygen tank and forward skirt.
2. The test stands contain hydraulic cylinders placed at strategic locations to push, pull or twist the structure to produce the required loads calculated by the test engineers to simulate actual launch conditions.
3. Multiple Interface 1200-series load cells of up to 2 million lbf capacity are attached in arrays to the hydraulic cylinders to measure the load being produced by each cylinder within 0.07%.
4. Load cell outputs are also fed back to the control system to control the cylinder forces. Temperature-compensated strain gages within each load cell reduce errors in output to 0.0008%/°F (0.0015%/°C).
5. Strain gauges bonded to the rocket structure being tested are connected to a data acquisition system for stress analysis.

1200 High Capacity Standard Precision LowProfile™ Load Cell

WTS Pedal Force Testing

Interface Mini™

Industry: Automotive

Summary

Customer Need / Challenge

- To meet certain vehicle safety protocols, pedal force must be measured and recorded. In order to quantify the quality of the braking system, the relationship between pedal force and braking force at the axle must be ascertained, either during an on-road stopping test or in a simulated indoor environment with a dynamometer, where pedal force can be measured.

Interface Solution

- Using an Interface Model BPL Pedal Load Cell along with the Model Wireless Telemetry System (WTS) provides a solution that measures the force being applied during the use of a brake pedal cycle. Utilizing wireless telemetry with the following Interface components, the valuable data can be displayed and/or recorded in real time using a PC and/or a handheld receiver depending on the requirements and preferences of the customer.

Results

- The relationship between pedal force and axle braking force is measured and recorded to ensure compliance with required safety regulations. Any necessary calibrations, adjustments, or modifications to the braking system can be assessed by whether the results of the brake testing fall within appropriate ranges of a pre-determined testing protocol.

Materials

- Model BPL Pedal Load Cell (mounting equipment - straps included)
- Model WTS Wireless Modules:
 - Transmitter Module (WTS-AM-1E)
 - Handheld Module (WTS-BS-1-HS)
 - Base Station Module (WTS-BS-6)

How It Works

- Model BPL Pedal Load Cell Load is installed onto pedal so that the output cable to the transmitter has clearance from any snagging throughout the entire pedal pumping cycle.
- Mount the transmitter WTS-AM-1E in a safe location so that there is enough slack in the cable for a full pedal pumping cycle. The Module transmits wirelessly to the WTS Toolkit App.
- Using WTS Wireless System with the receiver (WTS-BS-6), force readings from the load cell can be displayed, logged and graphed directly on a PC. To do so, plug in the WTS-BS-6 receiver into USB port on the PC, install the WTS Toolkit software, and finally pair the transmitter to the receiver as outlined in the documentation with the software.
- Using WTS Wireless System with the handheld receiver (WTS-BS-1-HS), force readings from the load cell can be displayed on a wireless battery powered receiver.

Aircraft Wing Fatigue Load Cell

Industry: Aerospace, Test and Measurement

Summary

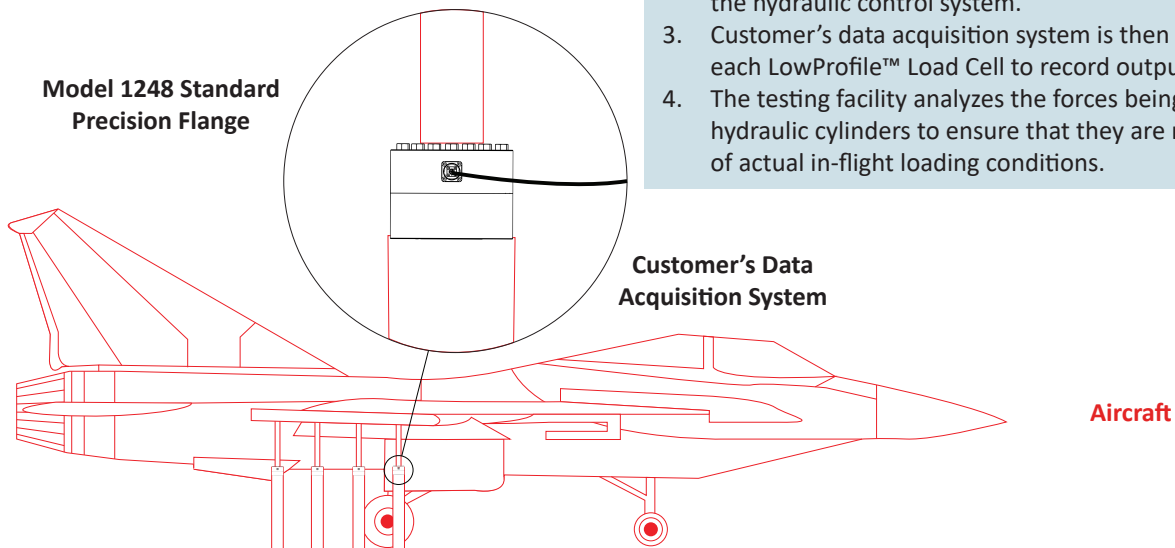

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none">Before any of the U.S. Navy's F/A-18 twin-engine supersonic fighter jets can be put into operation, the wings of the aircraft must undergo fatigue testing in a controlled environment to ensure that they are capable of withstanding the forces that will be encountered during real-world flight throughout the lifetime of the aircraft. Highly accurate measurements must be recorded in order to make sure that a near-exact replication of in-flight conditions are being achieved.	<ul style="list-style-type: none">During fatigue tests, Interface Model 1248 Standard Precision Flange LowProfile™ Load Cells are installed in line with the hydraulic cylinders, which apply back-and-forth loading forces to the aircraft. This is carried out over the course of 18 months to simulate in-flight stresses and strains on the wings. Load cells are connected to indicators, which record output.	<ul style="list-style-type: none">Capable of withstanding more than 100 million (1×10^8) fully reversible load cycles, Interface's LowProfile™ fatigue-rated load cells have performed flawlessly in F/A-18 wing testing - with zero recorded failures in the many years that testing facilities around the world have been using them.

Materials

- Model 1248 Standard Precision Flange LowProfile™ Load Cell in 500 kN capacity with dual bridge option.
- Customer's data acquisition system.
- Customer's hydraulic control system.

How It Works

- The F/A-18 is placed on a hydraulic testing bed where it is subjected to loading that simulates in-flight conditions.
- Interface Model 1248 Standard Precision Flange LowProfile™ load cells are connected to each hydraulic cylinder that applies force to the wings and data is sent to the hydraulic control system.
- Customer's data acquisition system is then connected to each LowProfile™ Load Cell to record output.
- The testing facility analyzes the forces being created by hydraulic cylinders to ensure that they are representative of actual in-flight loading conditions.

Engine Dynamometer Load Cell

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

Internal combustion engines are by far the most common power source for land vehicles. From a 2-stroke motor in a lawn mower, to a V-8 stock car engine, horsepower and torque are the benchmarks of engine performance. Engine manufacturers and aftermarket suppliers use an engine dynamometer (dyno for short) to accurately measure an engine's performance. An engine dyno isolates an engine's power output to help quantify its overall performance, applying a load directly to the engine and utilizing a load cell to measure the torque absorbed by the loading mechanism. Horsepower is then calculated using the torque and RPM of the engine.

Interface Solution

A precision S-Type Load Cell is attached to a torque arm which "feels" the torque from the engine loading system. The Interface Model SSMF is a great choice because it is fatigue-rated for 1x10⁷ fully reversed cycles, and is environmentally sealed to withstand harsh environments. Utilizing the Model CSC Signal Conditioner provides a clear signal to a data-acquisition system.

Results

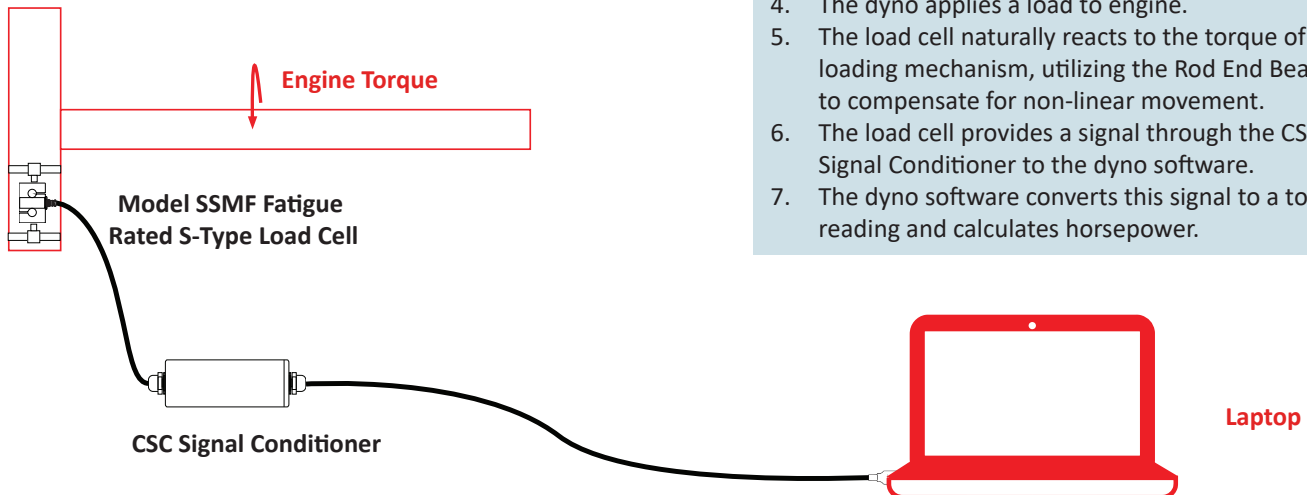

The load cell reacts precisely with the amount of torque being produced by the engine and provides accurate signals to the data-acquisition system. Engineers are then able to analyze the power transfer for the engine and optimize for performance.

Materials

- Model SSMF Fatigue Rated S-Type Load Cell.
- Rod End Bearings.
- CSC Environmentally Sealed Signal Conditioner.

How It Works

1. The engine is loaded and secured into the dyno.
2. All support systems are installed and tested.
3. The engine is started.
4. The dyno applies a load to engine.
5. The load cell naturally reacts to the torque of the loading mechanism, utilizing the Rod End Bearings to compensate for non-linear movement.
6. The load cell provides a signal through the CSC Signal Conditioner to the dyno software.
7. The dyno software converts this signal to a torque reading and calculates horsepower.

Hydrofoil Testing in Wave Tank Load Cell

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

Hydrofoil design is a delicate balance between performance and complexity. Finding the right shape without using overly complex angles to achieve the desired amount of lift is crucial when designing a successful hydrofoil. Once an engineer's concepts are ready for testing, using the best force measurement equipment is required to sense the subtle differences between hydrofoil designs.

Interface Solution

Lift and drag are the most important characteristics of a hydrofoil. Model 3A120 3-Axis load cell is needed to read these forces. The Fz senses lift and the Fx and Fy sense the drag. Using a model BSC4D-USB bridge amplifier increases the visibility of the load cells output signals.

Results

When using the load cell and bridge amplifier, the engineers are able to record the real world lift and drag forces the hydrofoils are having on the water craft. This data allows a more in-depth comparison of proposed hydrofoil designs to find the best model for the job.

Materials

- Model 3A120 3-Axis Load Cell.
- BSC4D-USB Multi-Channel, which includes BlueDAQ display, graphing, and logging software & PC Interface Module.

How It Works

1. Model 3A120 3-Axis load cell is fixed to the hull of the water craft.
2. The BSC4D-USB is connected to the load cell.
3. The hydrofoil boom is attached to the 3-Axis load cell.
4. The 3-Axis load cell and bridge amplifier are protected in a waterproof housing.
5. The water craft is placed in a wave tank or current simulator.
6. The 3-Axis load cell naturally reacts to the lift and drag loads of the hydrofoil.
7. The data is logged and stored via the BSC4D-USB on a PC laptop.

In-Motion Rail Weigh Load Cell

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

A rail station owner wanted to collect data on the load profiles for rail cars as they were entering into the station in-motion. The customer wanted to build their own low cost set-up using components from Interface Inc. and their existing PC setup for the purpose of logging weight load characteristics in order to diagnose possible side to side loading issues, overload issues, wheel flats or wheel impact issues, at any rail car speed.

Interface Solution

(12) Model 2450 50K capacity standard stainless steel load cells were mounted in to metal fabricated box-like structures and bolted into 6 consecutive cement rail ties, 1 on each side of each tie under the rail with a direct line of force with the rail. The cells were split into three groups of four: front, middle, and back. Each group of cells was connected to a dedicated BSC4D that accepted four load cell inputs. The BSC4D were connected to a PC through a USB hub.

Results

After all the connections were made the operator had a valuable tool for monitoring load characteristics which were used to detect a number of diagnostic conditions. The manager saved cost by creating his own set-up in-house for in-motion rail car load measuring as compared to alternative solutions/ proposals from other competitors.

Materials

- (12) Model 2450 50K capacity Standard Stainless Steel Load Cell.
- (3) Model BSC4D-USB Multi-Channel Bridge.
- Amplifier & PC Interface Module.

How It Works

1. The customer made a special fixture that allowed for the mounting of the Model 2450 50K Capacity Standard Stainless Steel Load Cell. On the top there was a plate with a threaded rod which threaded into the load cell and on the bottom was an encasement that ensured proper clearance, stability, and proper enclosure from the elements.
2. The cement rail ties were modified on both sides underneath the rail area to provide a recessed clearance for the cell fixtures. The fixtures were then fastened into the tie. Each tie has 2 fixtures. There were 6 ties altogether. There were 2 ties (4 cells) per group: front, middle, and back.
3. The load cells within the installed fixtures were connected via cables to the appropriate BSC4D -USB Multi-Channel Bridge Amplifier & PC Interface Module, using proper protective accessories and maintaining clearance from any potential snag or crush points.
4. The interface modules were each connected to a PC through a USB hub.
5. The PC had the BlueDAQ software installed that came with the interface modules.
6. After the set-up was complete the operator had full access to logged load data from all 12 load cells which was used to diagnose railcar issues.

Race car Suspension Testing Load Cell

Industry: Automotive and Vehicle, Test and Measurement Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none">• Race car suspensions require fine tuning for best performance on various tracks.• Simulation of bumps, banking and other track conditions result in off-axis loading.	<ul style="list-style-type: none">• Interface 1200-series load cell mounted on top of each post in a 4-, 5-, or 7-post rig allows race teams to measure forces during simulated laps. Moment compensating design of 1200-series load cells provide accurate readings during off-axis loading.	<ul style="list-style-type: none">• Highly accurate (0.04%) measurement of loads applied to individual suspension points.

Materials

- (4) 1200 Standard Precision LowProfile™ Load Cells.

How It Works

1. A multiple-post vehicle suspension test rig is built into or under the floor of a race team facility. A 4-post rig tests forces at each wheel; 5-post rig adds a rear suspension point and a 7-post rig tests aerodynamic forces in addition to road (wheel) loading.
2. An Interface 1200-series load cell is mounted on each post.
3. Hydraulic actuators individually apply forces to each post to simulate the surface conditions of the track.
4. Load cells measure the aggregate of the forces being applied from both the post on which the load cell is mounted and forces from other posts being applied to the vehicle (such as when simulating a banked surface).
5. Load cell output is fed to the control system to determine cylinder force required to produce the correct force to simulate the track condition.

Chemical Reaction-Mixing Torque Transducer

Industry: Industrial Automation

Summary

Customer Need / Challenge

- An end product is made by mixing various raw materials together in a mixing tank.
- To ensure product quality and safety, it's important that the ingredients are mixed properly without under or over-mixing.
- To do this, the density and viscosity of the mixture must be continuously analyzed during the mixing process.

Interface Solution

- Mount the mixing motor to a hollow flange reaction torque transducer to measure mixing torque.

Results

- Customer is able to determine ideal density and viscosity based on torque measurements in order to monitor the ingredient mixing and maintain product quality and safety.

Materials

- 5330 Reaction Torque Sensor.
- 920i Programmable Weight Indicator and Controller.

How It Works

1. The 5330 Reaction Torque Sensor is mounted to the adapter plate between the mixing motor and the tank lid.
2. The motor shaft passes through the hollow sensor and mobilizes the mixer shaft and blades.
3. The sensor measures the torque and feeds information back to the 920i Programmable Weight Indicator and Controller.
4. Mixing speed and duration is controlled.

Seat Testing Machine

Multi-Axis

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

- An Automotive Seat Manufacturer was conducting durability testing on their seats. During testing, the customer was consistently overloading and replacing their single-axis load cells. After a thorough inspection, it was discovered that this was due to bending moments that had never been quantified.

Interface Solution

- An Interface Model 6A68C 6-Axis load cell was installed in their existing test machine. The 6-Axis Sensor was intentionally oversized allowing the customer to measure the unidentified bending moments while preventing any damage to the 6-Axis Sensor. A Model BX8 was used to graph, log, & store the data collected at the sensor.

Results

- The customer was able to identify previously unknown bending moments, permitting them to choose how they would like to proceed with testing.
- Select a more appropriate single-axis load cell capacity, capable of withstanding the entire combined loads; including the bending moment.
- Continue using a 6-Axis Sensor to take measurements.
- Redesign their testing fixture to eliminate bending moment.

Materials

- Model 6A68C 6-Axis Load Cell.
- Model BX8- AS Multi-Channel Bridge Amplifier & PC Interface Module with Software.
- Appropriate Cabling.

How It Works

1. The model 6A68C 6-Axis sensor is installed between simulated seated human and the robotic arm.
2. The model BX8- AS connected between the 6-Axis Sensor and the customer's PC Laptop.
3. The testing machine repetitively places simulated human in tested seat.
4. The 6-Axis sensor measures loads in all six axes (Fx, Fy, Fz, Mx, My, Mz).
5. The sensor's output is fed to the BX8 and to the PC laptop where it is displayed using the included software.

Wave Energy Generator Load Cell

Industry: Energy

Summary

Customer Need / Challenge

A scientist has been tasked to create electricity by using the energy that is generated by ocean waves.

Interface Solution

As electricity is generated by ocean waves, an Interface load cell will measure tether line tension using a submersible 3200 Hermetically Sealed LowProfile® Precision Stainless Load Cell. The mooring line was attached to the load cell base and the platform generator was connected to the load cell hub. This measured the forces that were generated by the ocean waves and data was later analyzed by the customer's Data Acquisition System (DAQ).

Results

Scientists used force data to make adjustments to tether line. Also, if tether line breaks free, the scientist can be notified immediately to reattach the tether line.

Materials

- 3200 Hermetically Sealed LowProfile® Precision Stainless Load Cell.
- CLV-101 Heat Treated Steel Clevis.

How It Works

1. 3200 Hermetically Sealed LowProfile® Precision Stainless Load Cell is connected between a mooring line on the sea floor and a wave energy generator platform.
2. Load cell cable is connected to customer's DAQ.
3. As electricity is generated by ocean waves, force readings from load cell are recorded in the DAQ.
4. Results are analyzed by a scientist and adjustments to the tether line are made accordingly.

Windmill Energy Torque Transducer

Industry: Energy

Summary

Customer Need / Challenge

Customer wants to improve the performance of a windmill by adjusting the blade pitch and measuring the torque generated as power ramps are studied.

Interface Solution

Interface Model T2 is coupled between windmill blade propeller and electric generator. Information will be sent to customer's Data Acquisition System (DAQ).

Results

Customer was able to use torque data to determine the optimal blade pitch for the windmill. The windmill will generate more power and with less stress on the bearings.

Materials

- Model T2 Ultra Precision Rotary Torque Transducer.
- Interface Shaft Style Torque Transducer Couplings.

How It Works

1. Model T2 Torque Transducer is installed between windmill propeller and electric generator using Interface torque couplings.
2. Model T2 is connected customer's DAQ.
3. Tests are performed and torque data is logged into customer's DAQ.
4. Results are examined by customer and optimal blade pitch is determined.

Windmill

Lifting Heavy Objects Wireless Telemetry System

Industry: Industrial Automation

Summary

Customer Need / Challenge

Customer needs to use a crane to move heavy construction materials around the work site and need to monitor the weight of these objects as they are lifted.

Interface Solution

Interface Model WTSSHK-B Wireless Load Shackle are connected in crane load string to measure forces. Model WTS-BS-1-HA Battery Powered Handheld Display is used to wirelessly receive load information and display results.

Results

Customer is successfully lifting and reading weight (wirelessly) on a handheld display while material is being relocated.

Materials

- WTSSHK-B Wireless Load Shackle.
- WTS-BS-1-HA Wireless Handheld Indicator.

How It Works

1. Wireless Load Shackle is connected in the load string of the crane.
2. Customer connects straps to the item that is being lifted and to the load shackle.
3. WTS-BS-1-HA Battery Powered Handheld Display will wirelessly display force readings from WTSSHK-B Wireless Load Shackle.

Tablet Forming Machine Optimization Load Cell

Industry: Industrial Automation, Medical and Healthcare

Summary

Customer Need / Challenge

A pharmaceutical tablet producer wanted to monitor the forces applied by the tablet forming machine in an effort to understand the relationship between raw material, die set, forming force, and motor cycle speed. The goal was to improve productivity and efficiency of the tablet forming process, while reducing losses (i.e. cracked tablets or voids) by adding a dimension of feedback that could be used to assign specific press adjustment criterion for given inputs.

Interface Solution

An Interface Model WMC Sealed Stainless Steel Mini Load Cell (10K lbf Capacity) was mounted in the section of the downward press bar. The machine was modified to accomplish this. The load cell was then connected to a Model 9320 Portable Load Cell Indicator to collect the needed data.

Results

After analyzing the data, the tablet producer was able to quantify adjustment levels by monitoring which forces produced the most optimal results for a given cycle speed, die set, and raw material. Productivity and efficiency was greatly improved by the enhancement of the data feedback.

Materials

- WMC Sealed Stainless Steel Mini Load Cell.
- 9320 Portable Load Cell Indicator.

How It Works

1. The customer made a custom fixture that allowed for the mounting of the WMC Sealed Stainless Steel Mini Load Cell between the downward press bar and the tablet, replacing a section of that downward press bar.
2. The output of the load cell was connected to the 9320 Portable Load Cell Indicator and set aside so that the cable did not interfere with the cycle and no snagging would occur. A cable tie was used to stow aside the cable and to ensure there was enough clearance for the entire cycle.
3. The customer then set out to establish a data correlation between the press forces for tablet forming and the outcome of the tablet itself for given raw materials, die sets, and speeds. Any variation in those variables warranted the possibility of a different optimal force.
4. The customer was then able to produce a set of guidelines to adjust the press force for the given inputs (raw materials, die sets, and speeds). These guidelines, when followed, increased productivity and efficiency while reducing losses by being able to calibrate the force.

Harness Durability Testing Load Cell

Industry: Industrial Automation, Test and Measurement

Summary

Customer Need / Challenge

Harnesses are often used to strap humans of various weights to safety equipment or sports gear. Harness manufacturers must determine load and durability factors for harnesses and their attachment points.

Interface Solution

A drop test apparatus uses an Interface 1200 Standard Precision LowProfile® Load Cell attached to a cable and loaded harness. The loaded harness is dropped from a specified height to measure the force generated during sudden stop at maximum cable extension.

Results

Engineers determine the total force on the harness for various body weights dropped from maximum usage heights to set harness limits. Tests can be repeated numerous times to determine fatigue and durability limits.

Materials

- 1200 Standard Precision LowProfile® Load Cell.
- REB-101 Heat Treated Steel Rod End Bearings.
- INF-USB3 Single Channel USB Interface Module with supplied software.

How It Works

1. Test engineers place the harness to be tested on a dummy of known weight.
2. The loaded harness is attached to one end of a cable. Ideally this is the same type of cable used to attach the harness to the sports equipment or safety device. The other end of the cable is attached to the bottom of 1200 Standard Precision LowProfile® Load Cell is fitted with a rod end bearing.
3. The top of the 1200 Standard Precision LowProfile® Load Cell attaches to the cross beam of a drop test apparatus, either directly or via another cable.
4. The loaded harness is winched to the top of the drop test apparatus, and then dropped. When the cable fully extends, the load cell measures initial and subsequent forces experienced as the loaded harness stops and bounces.
5. The load cell sends force measurement data to a laptop through an INF-USB3 Interface Module.

Furniture Fatigue Cycle Testing Load Cell

Industry: Industrial Automation

Summary

Customer Need / Challenge

To meet safety protocols in relation to the manufacturing of various furniture products, fatigue testing, shock testing, and proof testing must be rigorously performed before diffusion into the marketplace. Force testing simulations on furniture products are critical in determining the posted max loads in order to protect manufacturers from liability due to damages that might result from the misuse of those products and overloading.

Interface Solution

Using an Interface Model SSMF Fatigue Rated S-Type Load Cell along with Interface Model 9890 Strain Gage, Load Cell, & mV/V Indicator provides a solution that measures the force being applied in fatigue cycle testing of a furniture product, in this case testing the rocking mechanism in an office chair. Unlike other similar load cells, the Model SSMF is fatigue rated making it highly suitable for fatigue testing. No fatigue failure of any fatigue-rated Interface load cell, used within its ratings, has ever been reported.

Results

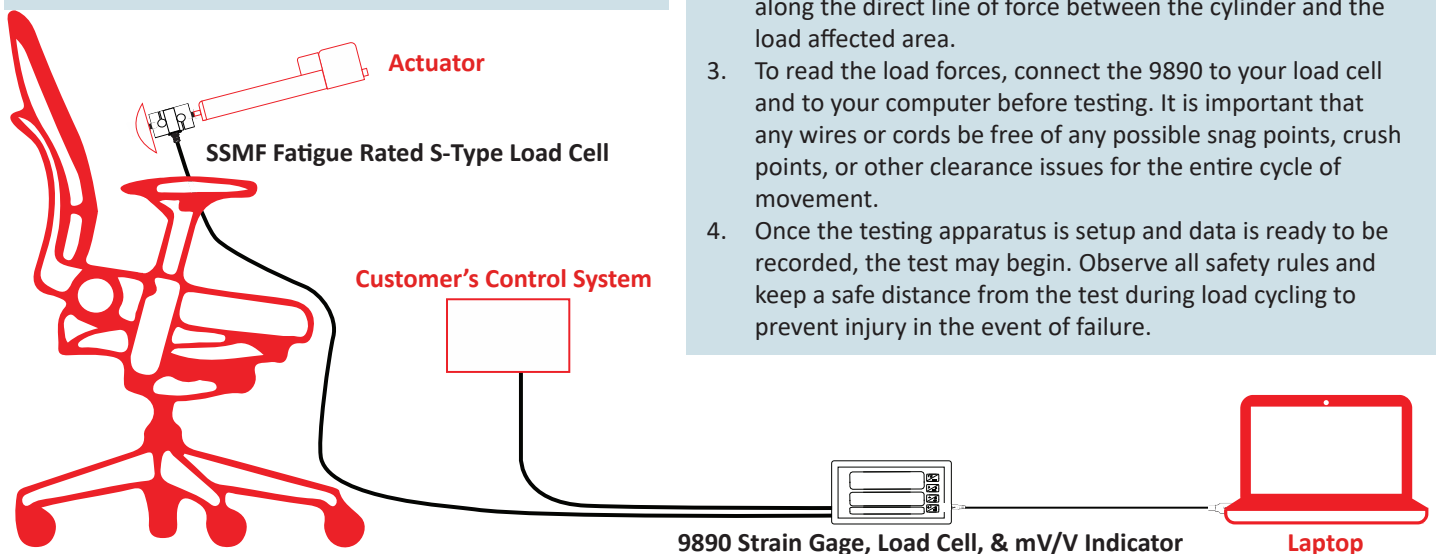

The furniture manufacturer was able to obtain accurate data about the rocking mechanism the office chair as it was fatigue cycled into failure. Adjustments were made to the design to improve the safety and life of the furniture, ensuring product quality and protecting the manufacturer from future liability.

Materials

- Model SSMF Fatigue Rated S-Type Load Cell.
- 9890 Strain Gage, Load Cell, & mV/V Indicator, which comes standard with logging and configuration software.

How It Works

1. Determine the feature on the product to be tested, and build an apparatus that will focus loads into that area.
2. Once the load applicators or cylinders are in place, install the Model SSMF Fatigue Rated S-Type Load cell somewhere along the direct line of force between the cylinder and the load affected area.
3. To read the load forces, connect the 9890 to your load cell and to your computer before testing. It is important that any wires or cords be free of any possible snag points, crush points, or other clearance issues for the entire cycle of movement.
4. Once the testing apparatus is setup and data is ready to be recorded, the test may begin. Observe all safety rules and keep a safe distance from the test during load cycling to prevent injury in the event of failure.

Candy Stamp Force Testing Load Cell

Industry: Industrial Automation

Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none">Manufacturers of hard shell candies often stamp text or logos on the candy shells.Stamping too hard breaks the candy shell. Stamping too light results in an uneven or incomplete imprint.	<ul style="list-style-type: none">A test apparatus uses an Interface Model WMC Mini Load Cell attached to hydraulic actuators to measure the compression force required.	<ul style="list-style-type: none">Engineers determine specific force needed to properly apply the imprint without breaking the candy shell.

Materials

- WMC Sealed Stainless Steel Mini Load Cell.
- 9330 High Speed Data Logger.

How It Works

- A hard shell candy is placed in a support under the test apparatus.
- An Interface Model WMC Mini Load Cell is mounted between the hydraulic actuator and the candy being tested.
- Force applied by the hydraulic actuator bends the top of the sealed load cell while the resistance from the candy bends the bottom of the load cell.
- The two ends of the load compress toward the center where strain gages convert the applied force to an electrical signal.
- Electrical signals are sent to the Interface Model 9330 and displayed in lbs. A USB connection to a laptop running the included graphical software shows the force profile as the load is applied.
- The test engineer continues to apply hydraulic force until the shell cracks.

Friction Testing Multi-Axis

Industry: Industrial Automation, Test and Measurement Summary

Customer Need / Challenge	Interface Solution	Results
A testing laboratory was looking to replace two single axis load cells used in their friction testing machine with one sensor that could measure force on the x, y, and z axis simultaneously.	An Interface Model 3A60 3-Axis load cell was installed on their existing machine with an Interface BSC4D-USB Multi-Channel PC Interface hooked directly to a PC laptop to monitor and log the data in real time.	The testing laboratory was able to simplify their sensor set-up and improve their data collection, creating more value for their end customer.

Materials

- Model 3A60 3-Axis Load Cell.
- Model BSC4D-USB Multi-Channel PC Interface.
- Module which includes BlueDAQ – display, graphing, and logging software.
- Appropriate cabling.

How It Works

1. The 3-Axis load cell is installed between the arm of the friction testing machine and the test specimen.
2. The BSC4D is installed between the 3-Axis load cell and the PC laptop.
3. Weights are placed on the top of the arm to create a down force.
4. The machine arm drags the test specimen across the material resting on the bed.
5. The 3-Axis load cell measures the forward/back force (x), side to side force (y) and down force (z) being applied to the test specimen.
6. The sensor's output is fed to the BSC4D and to the PC laptop where it is displayed using the included software.

Bridge Seismic Force Monitoring Solution

Load Pin

Industry: Industrial Automation

Summary

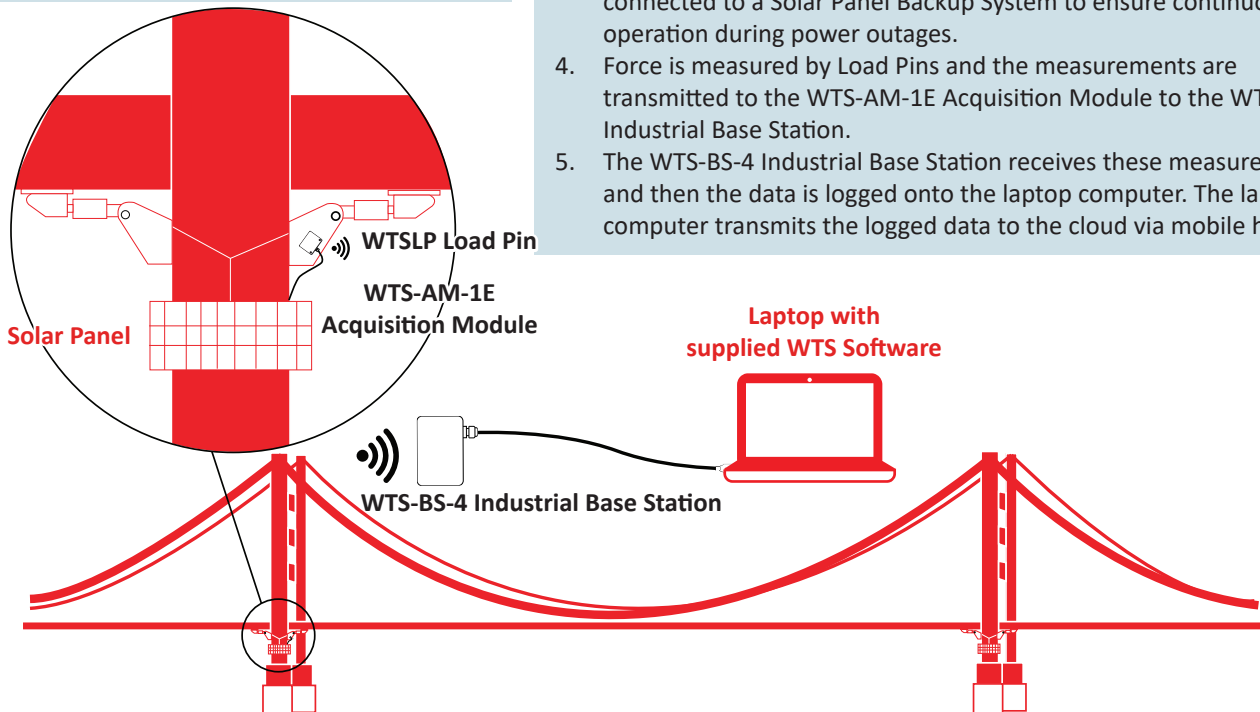

Customer Need / Challenge	Interface Solution	Results
Customer would like to monitor seismic activity that occurs to a bridge by using force sensors and then continuously monitoring bridge forces before, during and after earthquakes occur. Customer would prefer a wireless solution so they would not need to run long cables on the bridge.	Using Interface Inc. WTSLP Load Pin custom made to fit their needs along Interface Inc. WTS Wireless Telemetry System continuous force monitoring was able to take place without long cables.	Customer was able to monitor continuous loads, log information to the cloud and review information.

Materials

- WTSLP Load Pin.
- WTS-AM-1E Acquisition Module.
- WTS-BS-4 Industrial Base Station.
- Customer's Data Acquisition System.
- PC computer with supplied WTS Software.
- Solar Panel.

How It Works

1. WTSLP Load Pins and the WTS-AM-1E Acquisition Module are installed onto the bridge. The WTS-AM-1E Acquisition Module is installed in a way that will be a clear line of site.
2. WTS-BS-4 Industrial Base Station is connected to the PC computer and installed up to 800 meters of the WTS-AM-1E Acquisition Module.
3. WTS-AM-1E Acquisition Module and Laptop Computer are also connected to a Solar Panel Backup System to ensure continuous operation during power outages.
4. Force is measured by Load Pins and the measurements are transmitted to the WTS-AM-1E Acquisition Module to the WTS-BS-4 Industrial Base Station.
5. The WTS-BS-4 Industrial Base Station receives these measurements and then the data is logged onto the laptop computer. The laptop computer transmits the logged data to the cloud via mobile hot spot.

Ball and Socket Prosthetic Multi-Axis

Industry: Medical and Healthcare

Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none"> A medical device manufacturer was developing a new design for an artificial hip joint, and needed to validate load consistency, and the durability of their design. 	<ul style="list-style-type: none"> A Model 6A40B 6-Axis Load Cell was mounted to the manufacturer's test machine, where loads were applied to simulate actual use. A Model BX8 was connected to the sensor to collect data. 	<ul style="list-style-type: none"> After analyzing the data the manufacturer was able to improve the durability of their design.

Materials

- Model 6A40B 6-Axis Load Cell.
- BX8- AS Multi-Channel Bridge Amplifier with BlueDAQ Software.
- Customer PC for data logging and analysis.

How It Works

- A test profile was set and the loads monitored and fed back into the test machine to control the loads.
- The output of the 6-Axis sensor was connected to the Model BX8 Data Acquisition Amplifier which was connected via USB cable to the PC.
- BlueDAQ Software in the PC converts raw data signals to actual force and torque values at the ball joint and the analog output for the load axes from the BX8 were connected to the test machine for load control.
- The customer analyzed the data and made the required design modifications to improve the durability of the artificial hip joint.

Surgical Stapler Force Verification Load Button

Industry: Medical and Healthcare, Test and Measurement Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none">A large medical manufacturer required a load button load cell for verification of the manual forces needed to activate their surgical stapler. In addition to measuring force to a very precise degree, the cell also needed to be relatively small, easy to mount, and provide reliable accuracy.	<ul style="list-style-type: none">With a small diameter and capacities ranging from 100 – 1k lbf, the Interface LBMU Compression Load Button is ideal for surgical staple testing applications. The cell was mounted to the surgical stapler to enable force verification, and then connected to a 9890 Load Cell Indicator (installed in the customer’s test rig) which recorded output.	<ul style="list-style-type: none">After data was collected and analyzed, the medical manufacturer was able to optimize their design and minimize the excessive force applied by users (e.g., surgeons). The adjustments minimized hand fatigue and improved the stapler’s performance in real-world surgical applications.

Materials

- Model LBMU Compression Load Button, 100 lbf Capacity.
- Model 9890 Load Cell Indicator with supplied software (Shown Mounted in customer test rig.)

How It Works

- The LBMU Compression Load Button load cell is mounted beneath the surgical stapler to enable force verification.
- The 9890 Load Cell Indicator with supplied software is connected to the load cell and PC for logging so that output can be recorded.
- Testers then activate the stapler to simulate typical use, and the load cell converts applied force into signals, which are then fed to the indicator and displayed on the screen.
- Data is then collected and analyzed in order to minimize the excessive force applied by users, and improve upon the overall design of the stapler.

Prosthetics Load and Fatigue Testing Load Cell

Industry: Medical and Healthcare, Test and Measurement Summary

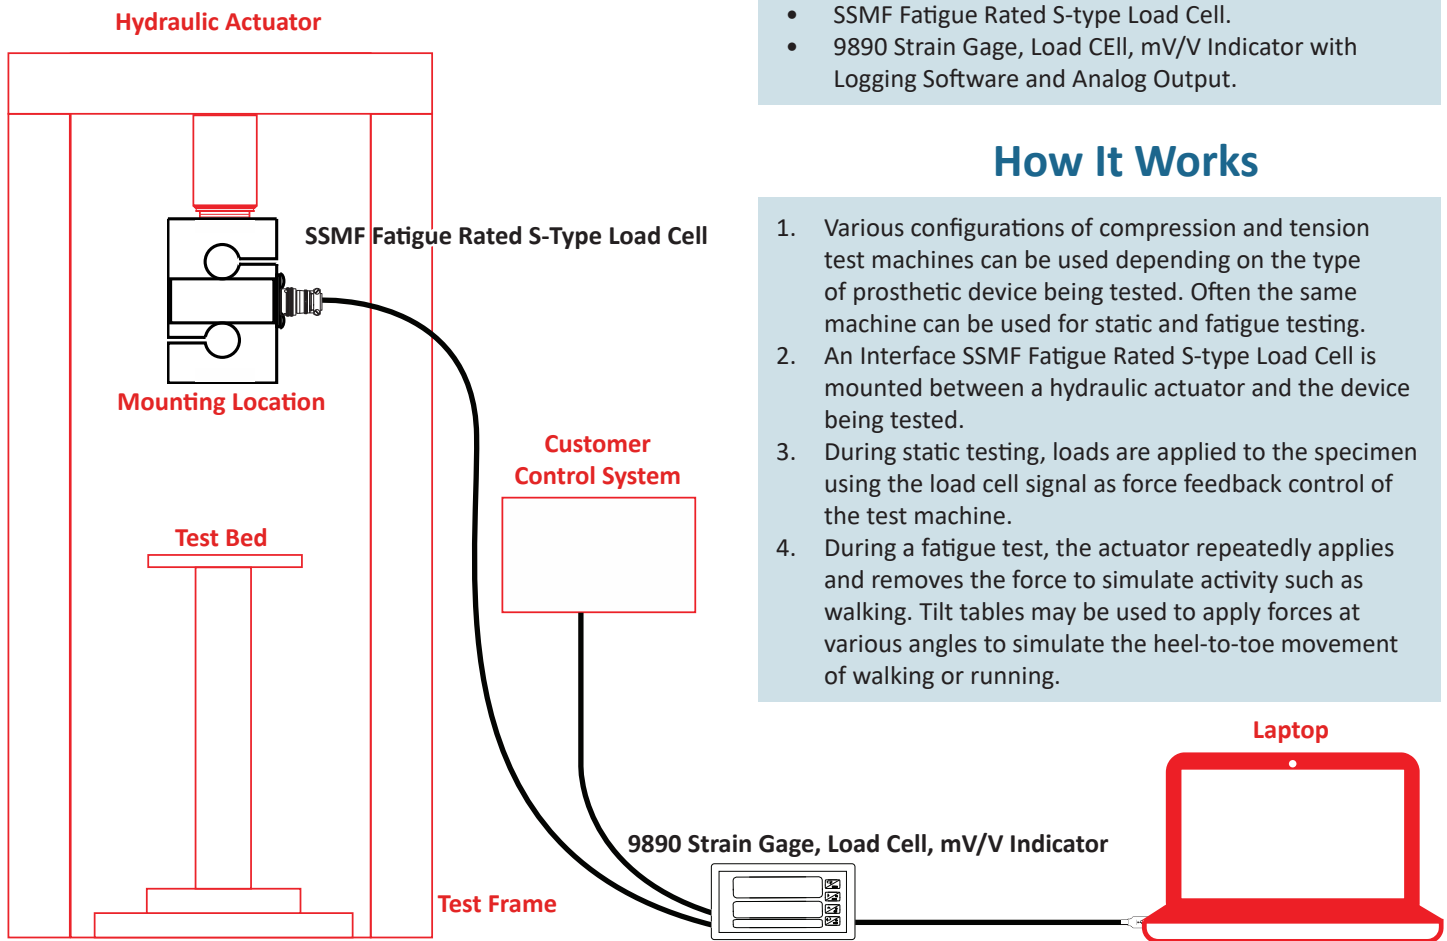

Customer Need / Challenge	Interface Solution	Results
Prosthetic limbs must be tested for extreme loading that can occur during falls, accidents, and sports movements. Fatigue testing of prosthetic components determines the expected lifespan of the components under normal usage.	A static load test apparatus uses SSMF Fatigue Rated S-type Load Cell attached to hydraulic actuators to apply and measure loads. A fatigue testing machine uses SSMF Fatigue Rated S-type Load Cell to apply and measure cyclic loads.	Engineers determine whether prosthetic materials and designs will withstand the rigors of daily use and occasional highload situations.

Materials

- SSMF Fatigue Rated S-type Load Cell.
- 9890 Strain Gage, Load Cell, mV/V Indicator with Logging Software and Analog Output.

How It Works

1. Various configurations of compression and tension test machines can be used depending on the type of prosthetic device being tested. Often the same machine can be used for static and fatigue testing.
2. An Interface SSMF Fatigue Rated S-type Load Cell is mounted between a hydraulic actuator and the device being tested.
3. During static testing, loads are applied to the specimen using the load cell signal as force feedback control of the test machine.
4. During a fatigue test, the actuator repeatedly applies and removes the force to simulate activity such as walking. Tilt tables may be used to apply forces at various angles to simulate the heel-to-toe movement of walking or running.

Medical Bag Weighing Load Cell

Industry: Medical and Healthcare

Summary

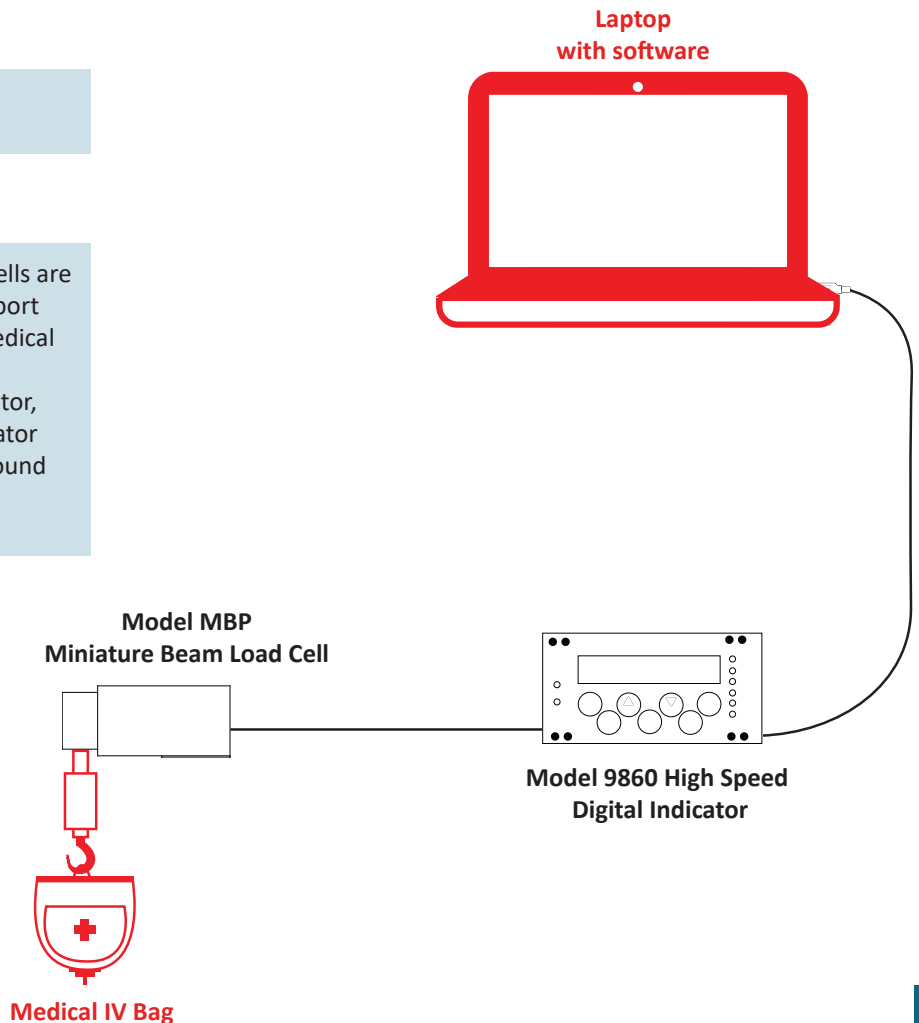

Customer Need / Challenge	Interface Solution	Results
It is important to monitor the amount of material in a medical bag. Medical staff needs to know if a medical bag is empty or if the dispensing tubes are blocked. Force measurements can track this.	Using Interface Model MBP Miniature Beam or MBP Miniature Beam with built-in overload protection combined with Interface instrumentation, force readings can be captured, displayed and stored for this need.	Health Professionals can review and monitor medical bag weights to ensure medicine is properly dispensed and bag is replaced when empty.

Materials

- Model MBP Miniature Beam Load Cell.
- Model 9860 High Speed Digital Indicator.

How It Works

1. Model MP or MBP Miniature Beam Load Cells are installed between the medical bag and support structure. The load cell will measure the medical bag weight that is hanging from it.
2. Using Model 9860 High Speed Digital Indicator, weight readings will display on a local indicator and can trigger open collector outputs to sound alarms or stop machines as needed.

Vascular Clamp Force Load Button

Industry: Medical and Healthcare

Summary

Customer Need / Challenge	Interface Solution	Results
Customer wants to examine different types of vascular clamps to see which types will generate the best clamping force of surgery.	Interface Model 9330 High Speed Data Logging Indicator and ConvexBT Load Button Load Cell were used to record the force measurements of these different clamps.	Customer was able to compare three different types of clamps and determine the best one to use during surgery.

Materials

- 9330 High Speed Data Logging Indicator
- ConvexBT Load Button load Cell
- Vascular clamps
- Load cell mounting hardware

How It Works

1. The ConvexBT is mounted to the jaw of the vascular clamp (this will require customer supplied fixtures).
2. 9330 High Speed Data Logging Indicator is connected to Model LBS Load cell.
3. Customer performs required tests and data is stored to SD card (can be stored directly to PC as well).
4. Customer downloads logging information from SD card to PC (if not directly logged to PC).
5. Customer evaluates results by reviewing logged data using a PC computer.

9330 High Speed Data Logging Indicator

Stent and Catheter Testing Load Cell

Industry: Medical and Healthcare, Test and Measurement Summary

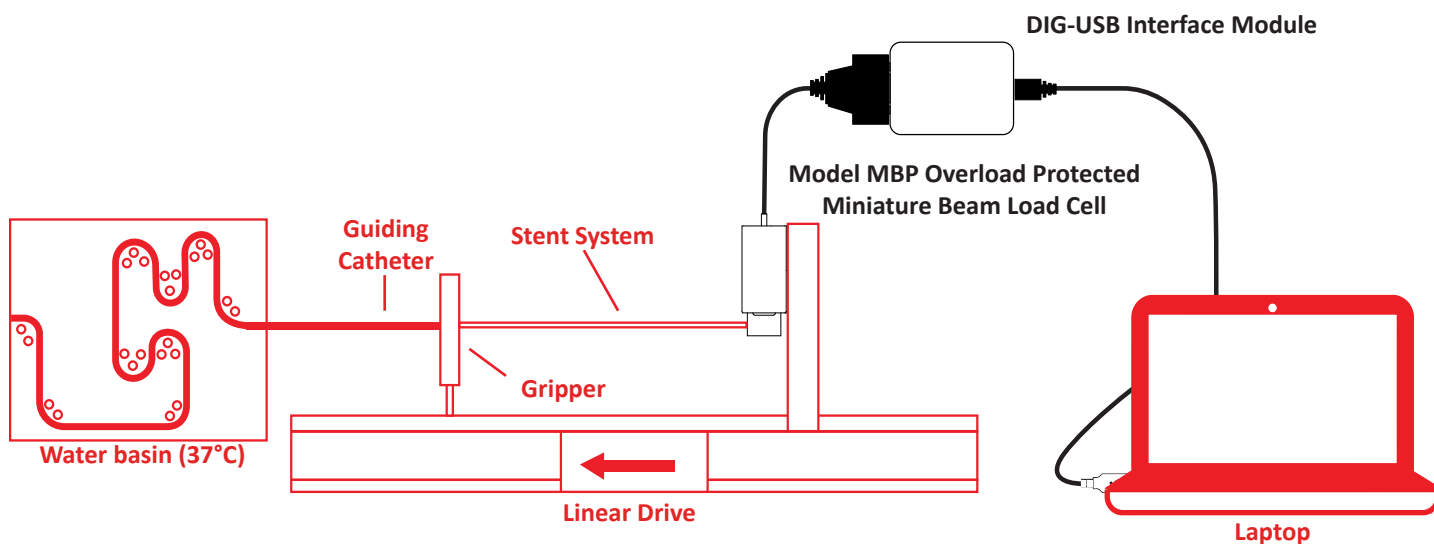

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none"> Customer needs to apply known forces to stent and catheters to ensure they pass all necessary strength and flexibility testing. 	<ul style="list-style-type: none"> Model MBP Overload Protected Beam Miniature Load Cell is placed behind the guide wire for the stent or catheter. The motor will spin the linear drive and push the load cell and guide the wire through the testing maze. Model MBP Overload Protected Beam Miniature Load Cell is connected to Model DIG-USB PC Interface Module. All forces are measured and stored on PC. 	<ul style="list-style-type: none"> Customer was able to perform required testing and log to PC, followed by being able to review results and take actions as needed.

Materials

- Model MBP Overload Protected Beam Miniature Load Cell.
- DIG-USB PC Interface Module.
- Interconnect cable.

How It Works

1. Install Model MBP Overload Protected Beam Miniature Load Cell onto linear guide.
2. Connect Model MBP Overload Protected Beam Miniature Load Cell to Model DIG-USB PC Interface Module.
3. Connect Model DIG-USB to customer's PC.
4. Forces measured by Model MBP Overload Protected Beam Miniature Load Cell will be displayed and logged onto customer's PC.

Bluetooth® Interface Mini™

Industry: Automotive

Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none">The customer needs to measure brake pedal force when the pedal is pressed during automobile testing.	<ul style="list-style-type: none">As the pedal is pressed, force is measured by the BPL-300-C Brake Pedal Load Cell. Results are transmitted by the BTS-AM-1 Bluetooth Low Energy (BLE) Strain Bridge Transmitter Module to the BTS Toolkit Mobile App and displayed on a mobile device.	<ul style="list-style-type: none">The customer objective has been achieved when a brake test was executed the force measurement was simultaneously displayed and graphed for examination in real time in the tested vehicle.

Materials

- BPL-300-C Brake Pedal Load Cell
- BTS-AM-1 Bluetooth Low Energy (BLE) Strain Bridge Transmitter Module
- BTS Toolkit Mobile App on iPhone or Android Devices

How It Works

- The Interface BPL-300-C is securely mounted on the top of the brake pedal.
- The load cell is connected to the BTS-AM-1 Module.
- The BTS-AM-1 Module transmits via Bluetooth to the BTS Toolkit Mobile App.
- The BTS Toolkit Mobile App runs on iPhone or Android devices.
- Brake test is performed and results are displayed in real time.

The BTS Toolkit Mobile App is available for Apple iOS and Android devices and is available for download at the Apple App Store and Google Play Store.

Engine Head Bolt Tightening Torque Transducer

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

An industrial automation company was building an automated assembly machine for an auto manufacturing plant. They needed to tighten all of the head bolts on an engine on their assembly line to a specific torque value. Having the head bolts precisely and consistently tightened to the engine block is critical to the operation of the engine.

Interface Solution

Several Interface Model T33 Spindle Torque Transducers were installed in their new machine to control torque and angle, and ensure the head bolt was properly tightened. The square drive of the T33 allowed the customer to fix their tool directly to the end of the torque sensor, streamlining the installation.

Results

The head bolts were correctly installed according to manufacturer specifications, producing an engine that meets performance and reliability expectations of the auto manufacturing plant.

Materials

- T33 Spindle Torque Transducer.

How It Works

1. Several Interface Model T33 Spindle Torque Transducers are installed in-line with the nutrunner/screwing spindle.
2. Fastening tools are attached to the end of each T33.
3. The machine comes down and screws on the engine head bolts.
4. The torque and angle profile are sent to the customer's machine controller.
5. Based on the feedback received by the machine controller, the automation will pass the engine to the next step in the assembly line or fail and have the engine evaluated further.

Fastening Work Bench Torque Transducer

Industry: Automotive and Vehicle

Summary

Customer Need / Challenge

- Customer is looking for a way to increase productivity by creating a fastening work bench for screw installation with related data collection. This increased productivity will come through the use of automated tooling and torque transducer measurements which are included as a part of an organized and efficient process.

Interface Solution

- Interface supplied a Model T15 Hex Drive Rotary Torque Transducer with integrated USB output for this project. USB output can measure and record torque, rotational speed and angle.

Results

- Customer was able to use many different screwdriver bit types with ease of installation due to the quick release feature of Model T15.

Materials

- T15 Hex Drive Rotary Torque Transducer with integrated USB Output Option
- T-USB-VS Software
- PC Computer
- Inline Electric or Pneumatic Screwdriver
- Articulating Balancing Arm

How It Works

1. Customer attaches T15 Hex Drive Rotary Torque Transducer to an electric or pneumatic screwdriver.
2. Customer attaches bit to T15 Hex Drive Rotary Torque Transducer.
3. T15 Hex Drive Rotary Torque Transducer is connected to USB and supplied software is loaded.
4. Customer performs fastening operations and fastening details are automatically recorded to the PC.

Fuel Pump Optimization - Rotary Torque Torque Transducer

Industry: Industrial Automation

Summary

Customer Need / Challenge	Interface Solution	Results
A nationally renowned race team was using a flow bench to measure fuel pump performance. They wanted to determine if they could reduce the power consumption of the pump by further analyzing the precise torque it produced.	An Interface Model T25 High Speed Rotary Torque Transducer was integrated into the pump drive to directly measure the torque required to spin the pump.	Using this data collected from the T25 in conjunction with the pressure and volume measurements of the fuel flow, the race team was able to characterize fuel pump performance vs. drive line torque, and then minimize the required drive power while maintaining the needed pressure and flow for efficient fuel delivery.

Materials

- T25 Rotary Torque Transducer with USB logging and graphing option.
- Interface Shaft Style Torque Transducer Couplings.

How It Works

1. The electric motor spins the fuel pump.
2. The Model T25 Rotary Torque Transducer measures the torque required to spin the pump.
3. The Data feeds to the PC Software for analysis. The software displays Torque, RPM & Horsepower.
4. Flow bench measures pressure and volume of fuel flow.
5. The Fuel pump is tuned to minimize required drive power while maintaining the required pressure and flow for proper fuel delivery.

Industrial Robotic Arm

Multi-Axis

Industry: Industrial Automation

Summary

Customer Need / Challenge	Interface Solution	Results
A manufacturer of a robot arm needs to measure force and torque when the arm picks up and places objects.	Interface supplied Model 6A40A 6-Axis Load Cell with Model BX8-HD44 Data Acquisition/Amplifier.	The 6A40-6 Axis Load Cell was able to measure all forces and torques (F_x , F_y , F_z , M_x , M_y , M_z) and the BX8-HD44 Data Acquisition/Amplifier was able to log, display, and graph these measurements while sending scaled analog output signals for these axes to the robot's control system

Materials

- 6A40 6-Axis Load Cell.
- BX8- Data Acquisition/Amplifier with includes BlueDAQ configuration, logging, display and graphing software.
- Customer's robotic arm and control system.

How It Works

1. Customer installed 6A40 6-Axis Load Cell between robot flange and robot grabber.
2. 6A40 6-Axis Load Cell was connected to BX8-HD44 Data Acquisition/Amplifier.
3. Customer connected analog outputs to their control system.
4. Result, customer is now able to measure forces and torques in 6 axes and send a scaled analog output signal to their robotic arm control system.

Linear Test Stand Load Cell

Industry: Test and Measurement

Summary

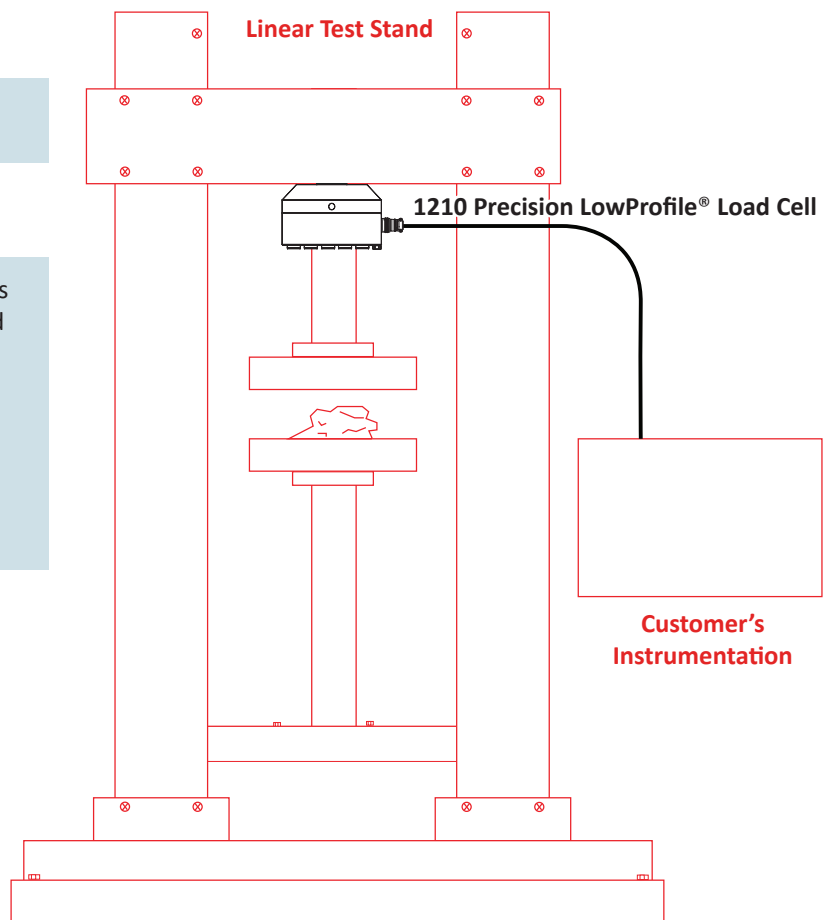

Customer Need / Challenge	Interface Solution	Results
Customer would like to crush test a specimen in their linear stand. The customer would like to use force to determine when the deformation actually occurs.	Interface provided Model 1210 Precision LowProfile® Load Cell with internal amplification of 0-10VDC Output.	Amplified Model 1210 Precision LowProfile® Load Cell was installed into the load string of the customer's load frame and the scaled analog output from the load cell was connected to the customer's instrumentation. When the force levels reached the crushing point, the customer's software was able to read the output of the amplified load cell and record the value.

Materials

- 1210 Precision LowProfile® Load Cell.
- Customer supplied linear test stand.

How It Works

1. Amplified 1210 Precision LowProfile® Load Cell was installed into the load string of the customer's load frame.
2. Scaled analog output from the load cell was connected to the customer's instrumentation.
3. When the force levels reached the crushing point, the customer's software was to read the output of the amplified load cell.
4. Customer's instrumentation recorded the value.

Lug Nut Assembly Torque Transducer

Industry: Automotive and Vehicle Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none"> Customer is looking for a way to increase productivity for automobile wheel installation while ensuring that the lug nuts are installed to the proper torque values for safety purposes. 	<ul style="list-style-type: none"> Interface supplied 5 each Interface Model T33 Spindle Torque Transducers for use in customer's Wheel Installation Assembly Machine which come standard with +/-5VDC analog output for torque measurements and a 360 pulse, 2-track encoder for Speed/ Angle measurement. 	<ul style="list-style-type: none"> Customer was able to perform 5 simultaneous torque measurements during wheel installation in seconds. Model T33 Spindle Torque Transducer provided a +/-5VDC Signal for torque and TTL Signal for angle measurement back to customer's control system so proper values could be applied and recorded.

Materials

- T33 Spindle Torque Transducer with standard +/-5VDC Signal for Torque with Integrated Angle Measurement
- Customer's control and data acquisition system

How It Works

- Customer installs multiple T33 Spindle Torque Transducers into assembly machine.
- Customer connects T33 interconnect cables to their control and data acquisition system.
- Customer performs wheel installation process while torque and speed/angle readings are automatically sent back to customers instrumentation for control and recording purposes.

Prosthetic Foot Performance

Multi-Axis

Industry: Medical and Healthcare

Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none"> Customer would like to know how a prosthetic foot responds as it is loaded during different stances. 	<ul style="list-style-type: none"> Interface Model 3A120 3-Axis Load Cell was installed between the leg socket and the prosthetic foot. Model 3A120 was then connected to customer's portable data acquisition system. 	<ul style="list-style-type: none"> Data was logged for X, Y, and Z axis. Customer was able to review the results and identify premature foot flat and dead spots during foot's use. They can now make improvements to the design.

Materials

- Model 3A120 3-Axis Load Cell.
- Portable Data Acquisition System.
- Prosthetic foot.

How It Works

1. Install Model 3A120 into prosthetic foot load stream.
2. Connect to customer's portable data acquisition system.
3. Review X, Y and Z force measurements to determine foot flat and dead spots.

Syringe Plunger Force Measurement Multi-Axis

Industry: Medical and Healthcare

Summary

Customer Need / Challenge

A manufacturer of syringes needed to measure the force required to dispense liquid from a syringe and ensure their product is within ISO guidelines.

Interface Solution

Interface supplied Model SMT Capacity Overload Protected S-Type Load Cell coupled with Model 9320 Battery Powered Handheld Indicator. This product was implemented into the customer's test frame for syringe testing.

Results

As the customer's load frame applied to the force of the syringe, Model SMT Capacity Overload Protected S-Type Load Cell measured the force applied to dispense this material. Model 9320 Battery Powered Handheld Indicator showed all measured forces and captured the peak values.

Materials

- SMT Capacity Overload Protected S-Type Load Cell.
- 9320 Battery Powered Handheld Indicator.
- Customer supplied calibration adaptors and calibration frame.

How It Works

1. SMT Capacity Overload Protected S-Type Load Cell measure the forces applied to dispense this material.
2. 9320 Battery Powered Handheld Indicator shows all measured forces.
3. The 9320 captures the peak values used to dispense this material for further evaluation.

Tank Weighing & Center of Gravity Load Cell

Industry: Test and Measurement, Industrial Automation

Summary

Customer Need / Challenge

Customer needs to monitor the amount of material in a tank by weight and locate the center of gravity.

Interface Solution

Using Interface Model A4200 Zinc Plated or A4600 Stainless Steel Weigh-check Load Cells, along with Interface Instrumentation, Interface Inc. provided a solution that monitors the amount of material by weight in their tank while locating the Center of Gravity.

Results

Tank weights are monitored so refilling, dispensing or emptying takes place safely while monitoring center of gravity.

Materials

- Model A4200 Zinc Plated or Model A4600 Stainless Steel Weigh-check Load Cells.
- Model 1280 Programmable/Controller.
- Setup & Scaling of Load Cells and Instrument by Interface, Inc.

How It Works

1. Model A4200 or A4600 Weigh-check Load Cell is installed between the support arm of tank and support pedestal of tank. The Weigh-check Load Cell will measure the load as material is loaded into or unloaded out of the tank.
2. Model 1280 Programmable/Controller will use weight measurements and display the weight for each leg and corresponding total weight.
3. Model 1280 Programmable/Controller will use weight measurements in conjunction with programmed formula to calculate the relevant Center of Gravity.

Torque Verification Torque Transducer

Industry: Test and Measurement, Automotive and Vehicle Summary

Customer Need / Challenge	Interface Solution	Results
Customer wants to perform regular torque testing on his ratchet-type torque wrench while recording these values for future examination.	Interface supplied Model TS15 Square Drive to Flange Reaction Torque Transducer with Model INF-USB3 PC Interface Module for the customer to use.	Customer was able to easily insert their ratchet-type torque wrench into the TS15 Square Drive, perform their calibration checks and view the results while logging them to their PC Computer.

Materials

- TS15 Square Drive to Flange Reaction Torque Transducer.
- INF-USB3 PC Interface Module with included configuration, display, graphing and logging software.
- Customer supplied ratchet-type wrench.

How It Works

1. Customer mounted TS15 to work bench through flange.
2. Customer inserted the ratchet-type torque transducer into the TS15 Square Flange Reaction Torque Transducer.
3. Customer performs calibration checks and views the results while logging them to the PC Computer.

Ratchet-Type Wrench

Verification Test Stand Load Cell

Industry: Test and Measurement

Summary

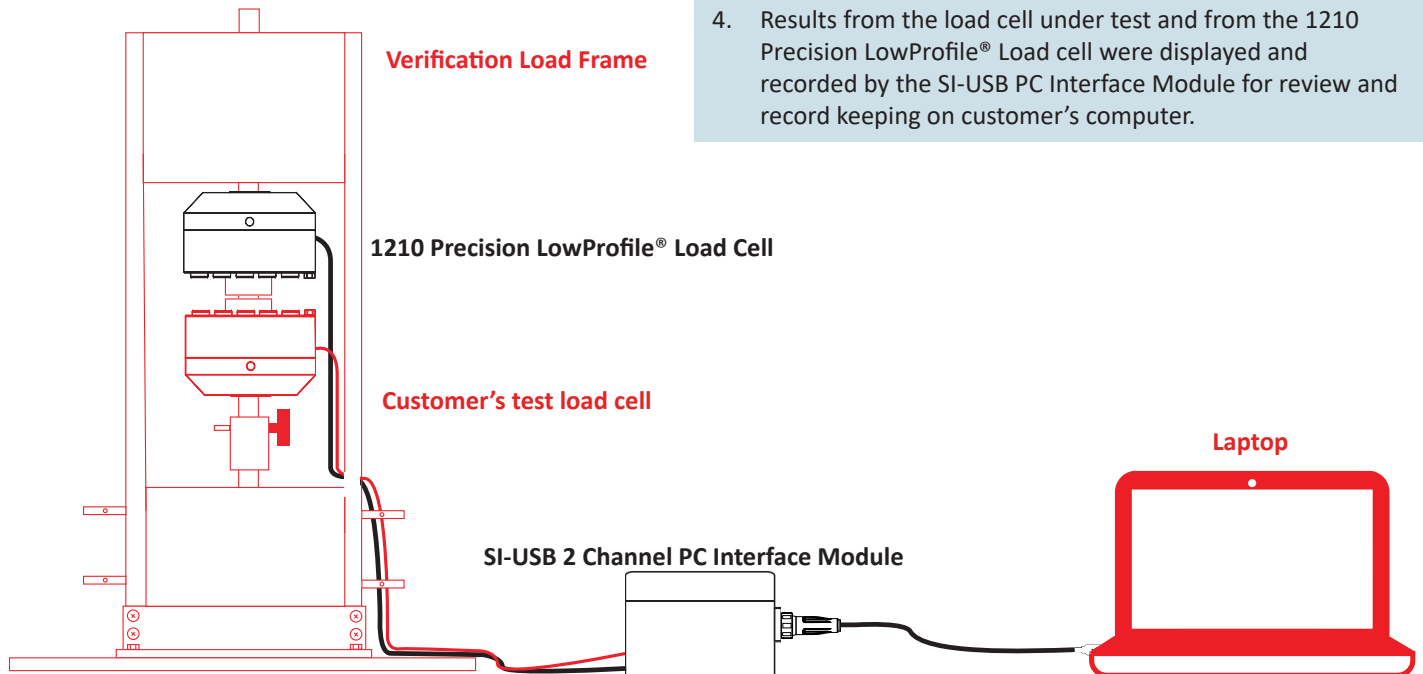

Customer Need / Challenge	Interface Solution	Results
Customer is looking for a way to verify if the load cell is in “good working order” for an upcoming test.	Interface proposed a solution with the customer’s supplied verification load frame, Model 1210 Precision LowProfile® Load Cell, connected with Model SI-USB 2-Channel PC Interface Module.	Customer installed their load cell and Model 1210 Precision LowProfile® Load cell into the verification load frame, and applied forces were displayed and recorded by Model SI-USB PC Interface Module for review and record keeping on customer’s computer.

Materials

- 1210 Precision LowProfile® Load Cell.
- SI-USB 2-Channel PC Interface Module with included setup, logging, and graphing software.
- Customer’s verification load frame.
- Customer’s test load cell.
- Customer’s supplied PC computer.

How It Works

1. Customer installed their load cell to the customer’s verification load frame, connecting it to 1210 Precision LowProfile® Load Cell.
2. Customer applied the specific load by turning the manual actuator.
3. Applied forces were measured by the 1210 Precision LowProfile® Load Cell.
4. Results from the load cell under test and from the 1210 Precision LowProfile® Load cell were displayed and recorded by the SI-USB PC Interface Module for review and record keeping on customer’s computer.

Wind Tunnel Multi-Axis

Industry: Aerospace

Summary

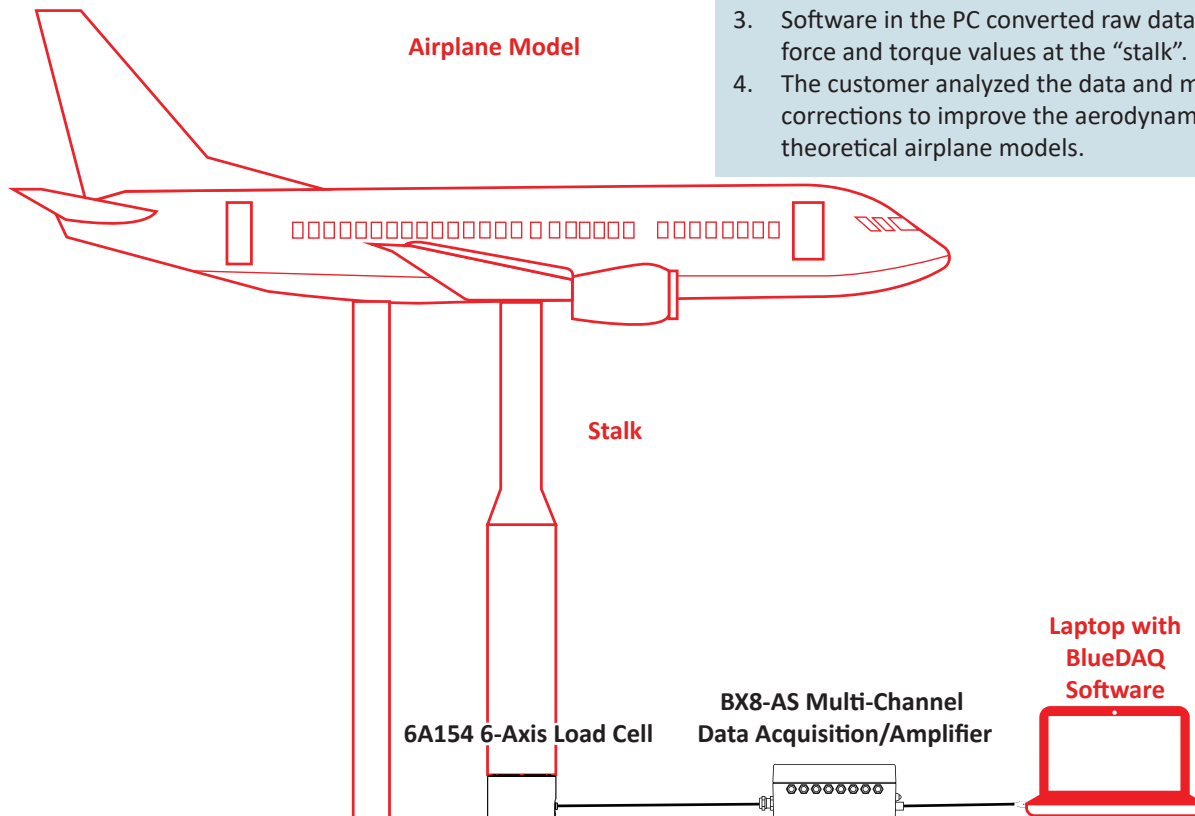

Customer Need / Challenge	Interface Solution	Results
A major aerospace company was developing a new airplane and needed to test their scaled model for aerodynamics in a wind tunnel, by measuring loads created by lift and drag.	A Model 6A154 6-Axis Load Cell was mounted in the floor of the wind tunnel, and connected to the scaled model by a "stalk". A Model BX8-AS was connected to the sensor to collect data.	The company analyzed the collected data and made the necessary adjustments in their design to improve the aerodynamics of their theoretical airplane models.

Materials

- 6A154 6-Axis Load Cell.
- BX8-AS Multi-Channel Data Acquisition/ Amplifier.
- BlueDAQ Software.

How It Works

1. The wind tunnel blew air over the scaled model creating lift and drag, which was measured and compared to the theoretical airplane models.
2. The output of the 6-Axis sensor was connected to the BX8-AS Amplifier, which was connected via USB cable to the PC.
3. Software in the PC converted raw data signals to actual force and torque values at the "stalk".
4. The customer analyzed the data and made the needed corrections to improve the aerodynamics of their theoretical airplane models.

BTS Equine Bridle Tension System

Interface Mini™ and BlueTooth®

Industry: Agriculture

Summary

Customer Need / Challenge

The customer needs to quantify the so-called “poll pressure.” Bits designed to give strong poll pressure using simple pulley lever principles show a much attenuated transfer of the rein tension through the bit to the poll. The attenuation is readily understood when the equine mouth is recognized as a “floating” fulcrum degrading the otherwise required fixed pivot point of an ideal lever.

Interface Solution

A BTS Equine Bridle Tension System, with 2 SMA Miniature S-Type Load Cells in both the line of the reins and that of the cheekpiece on one side of the horse, is used to study the dynamic response of the cheekpiece tension to rein tension in the ridden horse. Results are transmitted by the BTS-AM-1 Bluetooth Low Energy (BLE) Strain Bridge Transmitter Module to the BTS Toolkit Mobile App and displayed on a mobile device.

Results

The fundamental operation of the bits could in principle be discovered on the laboratory bench. But in practice of course, the equine mouth is expected to provide the fulcrum. Within the real experimental system comprising the rider’s hands, the horse’s mouth, and the bit, the elasticity of the equine mouth provides a “floating” fulcrum and a potential source of time-lag and decoherence between the dynamic rein and cheekpiece tensions.

Materials

- (2) SMA Miniature S-Type Load Cells
- (2) BTS-AM-1 Module BlueTooth® Telemetry System
- BTS Toolkit Mobile App

How It Works

The SMA Miniature S-Type Load Cells are inserted into the line of the cheekpiece and reins on one side of the horse. The SMA Miniature S-Type Load Cells are resistive wire strip strain gages whose changes in potential difference, produced with strain, are transferred to transmitters which send the data by the BTS Bluetooth® Telemetry System to a receiver connected to a USB port of a PC/ laptop. The BTS-AM-1 Bluetooth® Low Energy (BLE) Strain Bridge Transmitter Modules are held inside modified camera cases attached to a breastplate on the horse. The rider is therefore not carrying any of the electrical equipment. Before the data is collected and after the cheekpiece is pretensioned, the SMA Miniature S-Type Load Cells are tared to zero. This makes it possible in some cases to see negative net values for cheekpiece tension when rein tension is applied to the cheek. The rider takes a normal contact on both reins and performs ridden exercises in the three lower gaits, and the natural resistive counter-contact from the body of the horse provides pairs of force data from the rein and cheekpiece. Because the cheekpiece is directly attached to the headpiece, we can assume that forces seen in the cheekpiece are those that are applied to the poll of the horse.

WTS Equine Bridle Tension System

Interface Mini™ and Wireless Telemetry System

Industry: Agriculture

Summary

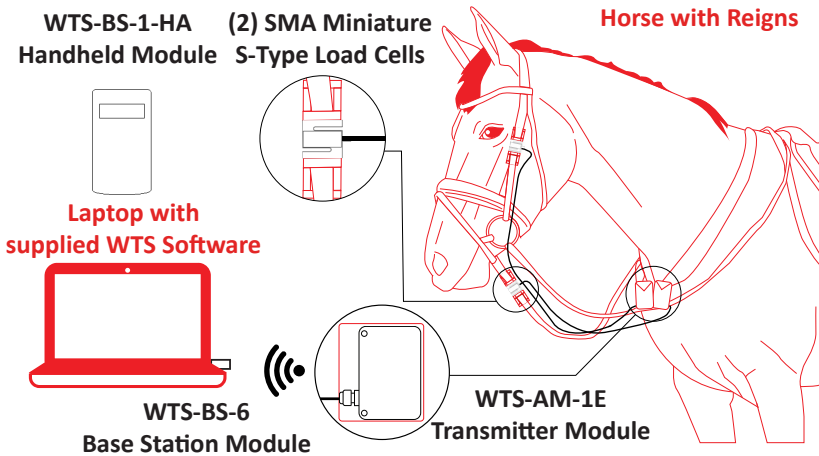

Customer Need / Challenge	Interface Solution	Results
The customer needs to quantify the so-called “poll pressure.” Bits designed to give strong poll pressure using simple pulley lever principles show a much attenuated transfer of the rein tension through the bit to the poll. The attenuation is readily understood when the equine mouth is recognized as a “floating” fulcrum degrading the otherwise required fixed pivot point of an ideal lever.	A WTS Equine Bridle Tension System, with 2 SMA Miniature S-Type Load Cells in both the line of the reins and that of the cheekpiece on one side of the horse, is used to study the dynamic response of the cheekpiece tension to rein tension in the ridden horse. Utilizing the Wireless Telemetry System (WTS), the valuable data can be displayed and/or recorded in real time using a PC and/or a handheld receiver depending on the requirements and preferences of the customer.	The fundamental operation of the bits could in principle be discovered on the laboratory bench. But in practice of course, the equine mouth is expected to provide the fulcrum. Within the real experimental system comprising the rider’s hands, the horse’s mouth, and the bit, the elasticity of the equine mouth provides a “floating” fulcrum and a potential source of time-lag and decoherence between the dynamic rein and cheekpiece tensions.

Materials

- (2) SMA Miniature S-Type Load Cells
- (2) WTS-AM-1E Wireless Strain Bridge Transmitter Module
- WTS-BS-1-HA Wireless Handheld Display for Multiple Transmitters
- WTS-BS-6 Wireless Telemetry Dongle Base Station
- WTS Toolkit Software & Log100 Software included
- Customer supplied PC/Laptop

How It Works

The SMA Miniature S-Type Load Cells are inserted into the line of the cheekpiece and reins on one side of the horse. The SMA Miniature S-Type Load Cell’s are resistive wire strip strain gages whose changes in potential difference, produced with strain, are transferred to transmitters which send the data wirelessly to a receiver connected to a USB port of a PC/laptop or a WTS-BS-1-HA Handheld Module. The WTS-AM-1E Transmitter Module are held inside modified camera cases attached to a breastplate on the horse. The rider is therefore not carrying any of the electrical equipment. Before the data is collected and after the cheekpiece is pretensioned, the SMA Miniature S-Type Load Cells are tared to zero. This makes it possible in some cases to see negative net values for cheekpiece tension when rein tension is applied to the cheek. The rider takes a normal contact on both reins and performs ridden exercises in the three lower gaits, and the natural resistive counter-contact from the body of the horse provides pairs of force data from the rein and cheekpiece. Because the cheekpiece is directly attached to the headpiece, we can assume that forces seen in the cheekpiece are those that are applied to the poll of the horse.

Crane Force Regulation Load Pin

Industry: Industrial Automation

Summary

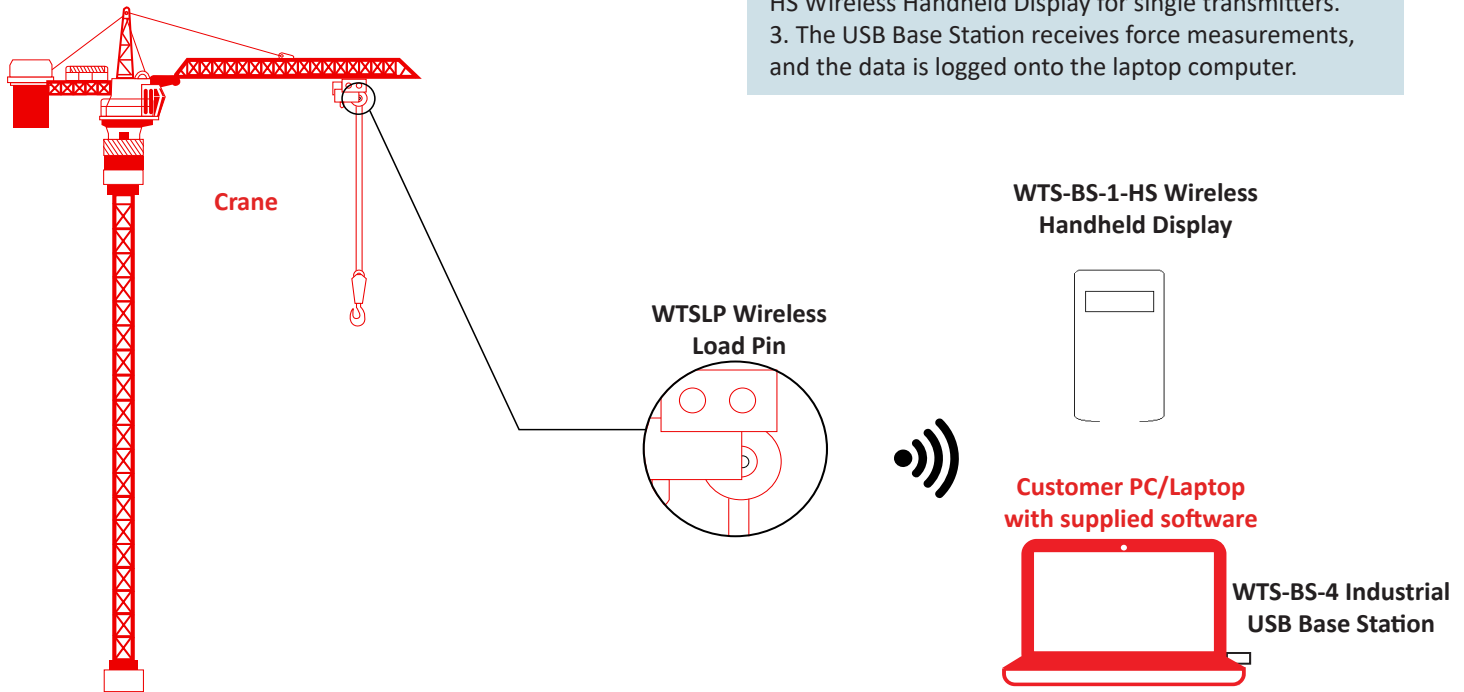

Customer Need / Challenge	Interface Solution	Results
Customer wants to regulate the maximum amount of heavy loads being lifted, so that production time can be both safe for workers and efficient. The customer wants to complete lifting duties faster and with little or no expense. A wireless solution is preferred, so that there would be no long cable interference during production.	With Interface Inc. WTSLP Wireless Stainless Steel Load Pin, this product can be custom made to be used for any and all types of cranes. It is also great for lifting both short and long distances. Paired with the WTS Wireless Telemetry System, force is measured and logged.	Customer was able to monitor the continuous force from the crane, and gather information on loads being lifted. Data is transmitted and logged to the customer's PC/laptop and is available to be reviewed.

Materials

- WTSLP Wireless Load Pin
- WTS-BS-4 Industrial USB Base Station
- WTS-BS-1-HS Wireless Handheld Display for Single Transmitters
- WTS Toolkit Software & Log100 Software Included
- Customer PC/Laptop

How It Works

1. The WTSLP Wireless Load Pin is installed at the turning block of the crane.
2. WTS-BS-4 Industrial USB Base Station is connected to the customer's PC Computer/laptop via USB port. The WTSLP can wirelessly transmit information up to 600 meters in distance to both the laptop or the WTS-BS-1-HS Wireless Handheld Display for single transmitters.
3. The USB Base Station receives force measurements, and the data is logged onto the laptop computer.

Crane Capacity Verification Tension Link

Industry: Industrial Automation

Summary

Customer Need / Challenge

A customer wants to verify that their crane is strong enough to safely lift a heavy load, at it's rated maximum load capacity. A wireless solution is needed to avoid long cables, and to have a faster installation time.

Interface Solution

Interface, Inc's Model WTS^LTL Lightweight Wireless Tension Link Load Cell can measure the load's maximum capacity. The WTS-RM1 Wireless Relay Output Receiver Modules also can trigger an alarm that can be set when the maximum capacity of weight/force has been reached. The data is transmitted and can be reviewed with the WTS-BS-1-HS Wireless Handheld Display, or, on the customer's PC/Laptop.

Results

Customer was able to verify if the crane is safe and functional enough to lift it's working load limit (WLL) or safe working load (SWL) capacity. The data is transmitted and logged to the customer's PC/laptop, or to a handheld device in real-time.

Materials

- WTS^LTL Lightweight Wireless Tension Link Load Cell
- WTS-RM1 Wireless Relay Output Receiver Module
- WTS-BS-1-HS Wireless Handheld Display for Single Transmitters
- WTS-BS-4 Industrial USB Base Station
- WTS Toolkit Software & Log100 Software Included
- Customer PC/Laptop

How It Works

1. The WTS^LTL Lightweight Wireless Tension Link Load Cell is installed on the crane, lifting an item that maxes out to the crane's working load limit (WLL).
2. The WTS^LTL transmits data to the WTS-RM1 Wireless Relay Output Receiver Module and can trigger an alarm when the capacity has been reached. Information is also transmitted both to the laptop (through the WTS-BS-4 USB Base Station) and the WTS-BS-1-HS Wireless Handheld Display for single transmitters in real-time.

Crane Block Safety Check Load Pin

Industry: Industrial Automation

Summary

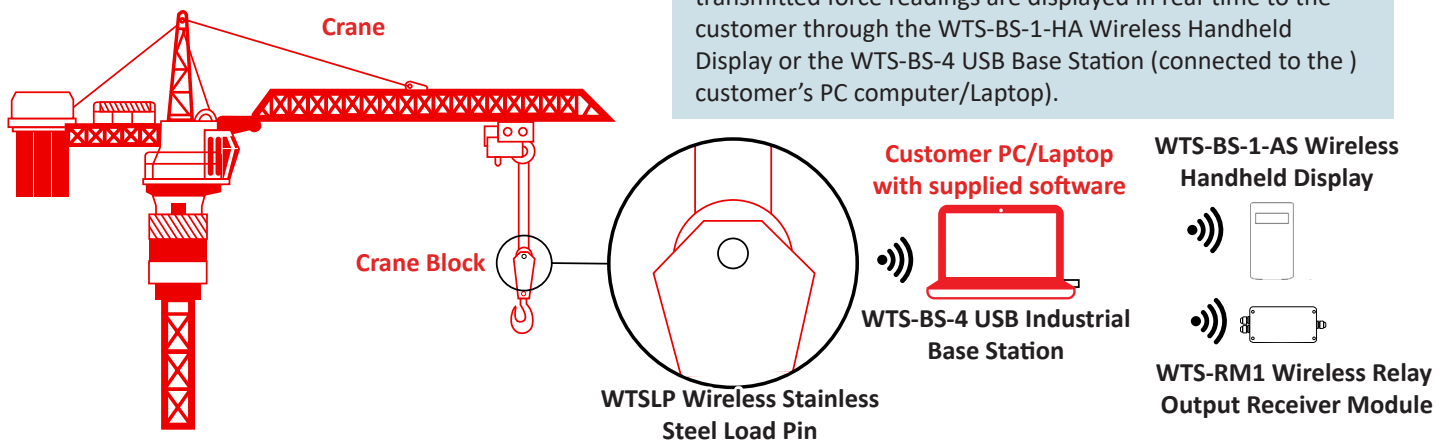

Customer Need / Challenge	Interface Solution	Results
A customer wants a system to detect if their crane block can lift heavy loads securely, in order to keep working conditions and personnel safe. If lifting capacities are exceeded, the customer wants a system to alarm them in real-time.	Interface, Inc.'s WTSLP Wireless Stainless Steel Load Pin can replace the existing load bearing pin in the crane block in order to measure the force being applied by the heavy load. Data will be transmitted and displayed through both the WTS-BS-4 USB Base Station (when paired with the customer's supplied PC computer/ Laptop) and the WTS-BS-1-HA Wireless Handheld for real-time results. The WTS-RM1 Wireless Relay Output Receiver Module will also trigger an alarm when maximum capacity has been reached.	The WTSLP Wireless Stainless Steel Load Pin, combined with the WTS products, was able to measure and determine force applied the moment a heavy load is lifted. The results were transmitted wirelessly, and ensured the customer whether or not the crane block was safely operational during production.

Materials

- WTSLP Wireless Stainless Steel Load Pin
- WTS-RM1 Wireless Relay Output Receiver Module
- WTS-BS-1-HA Wireless Handheld Display for Multiple Transmitters
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit Software & Log100 Software Included
- Customer PC/Laptop

How It Works

1. WTSLP Wireless Stainless Steel Load Pin is installed, replacing the normal load bearing pin on the block of the crane. A heavy load is added to the end of the block.
2. The WTS-RM1 Wireless Relay Output Receiver Module captures the data transmitted from the WTSLP Wireless Stainless Steel Load Pin and uses this to trigger and alarm when the setpoint is reached. Simultaneously, these transmitted force readings are displayed in real-time to the customer through the WTS-BS-1-HA Wireless Handheld Display or the WTS-BS-4 USB Base Station (connected to the customer's PC computer/Laptop).

AxialTQ™ Engine Dynamometer Torque Transducer

Industry: Automotive and Vehicle, Test and Measurement Summary

Customer Need / Challenge	Interface Solution	Results
<ul style="list-style-type: none"> The customer needs to measure the torque and the speed (RPM) produced by an engine and calculate it simultaneously. 	<ul style="list-style-type: none"> The Interface AxialTQ Wireless Rotary Torque Measurement System was developed in direct collaboration with over 30 end-users who shared their wish-lists for operational priorities, user interface, design, features, real-world field issues and more. 	<ul style="list-style-type: none"> The Interface AxialTQ Wireless Rotary Torque Measurement System accurately and simultaneously measured and calculated the torque and rotational speed (RPM) of the engine in real-time while collecting the data.

Materials

Interface Solution
<ul style="list-style-type: none"> AxialTQ Wireless Rotary Torque Transducer AxialTQ Output Module Customer PC running AxialTQ Assistant Software

How It Works

<ul style="list-style-type: none"> The AxialTQ rotor senses the torque with a high precision sensing element and strain gages. The electrical output is converted from an analog to a digital signal in the rotor. The high accuracy of the system is based on this combination of the proven sensing element technology with next generation electronics to provide the highest quality torque measurement available in the industry.

WTS Yacht Rigging Inspection Load Shackle

Industry: Maritime

Summary

Customer Need / Challenge

A customer wants to have a complete rigging inspection to make sure the mast, still lines, and all movable hoisting lines are functional and meet the proper specifications for sailing. The customer wants to test the tension of the forestay, shroud, and backstay cables. They also want to test the tension of the movable lines when sailing.

Interface Solution

With Interface, Inc's WTSSHK-B Wireless Crosby™ Bow Load Shackle paired with the WTS-BS-1 Wireless Handheld Display for Unlimited Transmitters, the customer can switch and view between multiple shackles being tested. The WTS-BS-4 USB Industrial Base Station can also be attached to the customer's PC/Laptop to display realtime measurements from the shackles and log data.

Results

The customer was able to conduct both a running and standing rigging inspection of their ship or vessel, and was able to determine if all lines were functional and met safety standards.

Materials

- WTSSHK-B Wireless Crosby™ Bow Load Shackles
- WTS-BS-4 USB Industrial Base Station
- WTS-BS-1 Handheld Display for Unlimited Transmitters
- WTS Toolkit & Log100 Software
- Customer supplied PC/Laptop

How It Works

1. WTSSHK-B Wireless Crosby™ Bow Load Shackles are attached to the vessels forestay, shroud, and backstay cables.
2. The measurement at a is transmitted wirelessly to the WTS-BS-1 Wireless Handheld Display for Unlimited Transmitters, where the customer is able to view all results of all shackles in realtime.
3. The WTSSHK-B Wireless Crosby™ Bow Load Shackles also transmit information to the WTS-BS-4 USB Industrial Base Station, attached to the customer's PC/Laptop for realtime results.

Mooring Line Tension Testing Tension Link

Industry: Maritime

Summary

Customer Need / Challenge

Due to the changing weather conditions, mooring cable lines undergo wear and tear. A customer wants to ensure all mooring lines for ships or vessels are securely docked at the same loading tension, so that they do not risk the mooring lines to break or cause damage.

Interface Solution

Interface, Inc.'s WTS^LT^L Lightweight Wireless Tension Link can be attached to each mooring cable in use. Results are sent to the customers through the WTS-BS-4 USB Industrial Base Station when connected to the customer's supplied PC computer/Laptop. Data can also be transmitted to the WTS-BS-1-HA Handheld Display for Multiple Transmitters, giving the customer the option to view multiple mooring cable line tensions.

Results

The customer was able to verify the tensions to multiple mooring cable lines. Thus, resulting in the security of their ship being safely docked.

Materials

- WTS^LT^L Lightweight Wireless Tension Links
- WTS-BS-4 USB Industrial Base Station
- WTS-BS-1-HA Handheld Display for Multiple Transmitters
- WTS Toolkit & Log100 Software
- Customer supplied PC/Laptop

How It Works

1. The WTS^LT^L Lightweight Wireless Tension Links are attached to all mooring cables being tested.
2. Force measurements are transmitted wirelessly in realtime to the customer's PC/Laptop through the WTS-BS-4 USB Industrial Base Station, or to the WTS-BS-1-HA Handheld Display for multiple transmitters.

Rescue Helicopter Hoist Test Load Shackle

Industry: Aerospace

Summary

Customer Need / Challenge

A customer wants to test the strength of the cable line used in the hoist of their helicopter during rescue missions and situations. They want to see if both the cable and the hoist can withstand a heavy load safely, and for long periods of time while the helicopter is in flight.

Interface Solution

Interface, Inc.'s WTSSHK-D Wireless Crosby™ Load Shackle is attached to each mooring cable in use. Results are sent to the customers through the WTS-BS-4 USB Industrial Base Station when connected to the customer's supplied PC computer/Laptop. Data can also be transmitted to the WTS-BS-1-HS Handheld Display for Single Transmitters, giving the customer the option to view mooring cable line tension.

Results

The customer was able to add a heavy load to the end of the helicopter hoist, to ensure it is strong and safe enough to carry both rescue personnel and objects while being in midair.

Materials

- WTSSHK-D Wireless Crosby™ Load Shackle
- WTS-BS-1-HS Handheld Display for Single Transmitters
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit & Log100 Software
- Customer supplied PC/Laptop

How It Works

1. The WTSSHK-D Wireless Crosby™ Load Shackle is installed at the end of the hoist.
2. A heavy load is attached to the shackle at its maximum capacity, and tested through mid flight in order to monitor the condition of the helicopter hoist.
3. Data is transmitted wirelessly to the WTS-BS-1-HS Handheld Display for a Single Transmitter, and also to the customer's PC for logging and graphing information.

Silo Monitoring and Weighing Load Cell

Industry: Agriculture

Summary

Customer Need / Challenge

A customer wants weigh and monitor the content inside their silo.

Interface Solution

Using Interface, Inc.'s A4200 Zinc Plated or A4600 Stainless Steel Weigh-check Load Cells, paired with 1280 Programmable Weight Indicator and Controller, the customer is able to monitor the amount of content by weight in their silo.

Results

The customer was provided a customizable solution to monitor and weigh their silo with Interface, Inc.'s load cells and instrumentation. Results from the 1280 Programmable Weight Indicator and Controller was sent to the customer's control center.

Materials

- A4200 or A4600 Weigh-Check Load Cells
- 1280 Programmable Weight Indicator and Controller

How It Works

1. The A4200 or A4600 Weigh-Check Load Cells is installed under the legs of the silo, or base of the silo. The Weigh-Check Load Cell will measure the load as material is loaded into or unloaded out of the silo.
2. Weight measurements will be displayed on the 1280 Programmable Weight Indicator and Controller, showing the weight for each leg and corresponding to the total weight of the silo. The 1280 also has the ability to perform batching functions, and send results to the customer's control center.

Concrete Dam Flood Monitoring

Interface Mini™

Industry: Infrastructure

Summary

Customer Need / Challenge	Interface Solution	Results
A customer wants to monitor and be notified if a concrete dam has reached high flooding levels.	Interface's WMC Miniature Sealed Stainless Steel Load Cells with multiple WTS-AM-1E Wireless Acquisition Modules connected to them, are small in size and perfect for measuring tension and compression. Multiple WMC's can be installed around the arch of the dam, so when flooding occurs, the WMC can transmit data and notify the customer through one of our Wireless Telemetry Systems.	The customer was notified wirelessly when flood level became too high for the dam in their control center.

Materials

- WMC Miniature Sealed Stainless Steel Load Cells
- WTS-AM-1E Wireless Acquisition Modules
- WTS-BS-4 USB Industrial Base Station
- WTS-BS-1-HS Wireless Handheld Display for Single Transmitters
- Customer PC Computer or Laptop

How It Works

1. Multiple WMC Miniature Sealed Stainless Steel Load Cells with multiple WTS-AM-1E Wireless Acquisition Modules connected to them, are anchored to the concrete dam at the maximum height preferred.
2. If flooding occurs, the force from the water triggers the WMC's, and data is transmitted wirelessly to the customer's WTS-BS-1-HS Wireless Handheld Display for single transmitters.
3. Data can also be sent to the customer's control center through the WTS-BS-4 USB Industrial Base Station, when attached to the customer's PC Computer or Laptop.

Chicken Weighing Load Beam

Industry: Agriculture

Summary

Customer Need / Challenge

A customer wants a weighing system to help them determine a specific weight for their chickens. They need a weighing system that will ensure accurate weight measurements to keep their birds at their weight in order to sell to supermarkets. They also need a system that will be able to undergo harsh conditions and unusual temperatures.

Interface Solution

Interface's SPI Low Capacity Platform Scale Load Cell is able to undergo strained temperatures and transmits highly accurate results. A plate can be put on top of the SPI, and then a chicken can be weighed on top of the plate. Data results can be displayed on the 480 Bidirectional Digital Weight Indicator.

Results

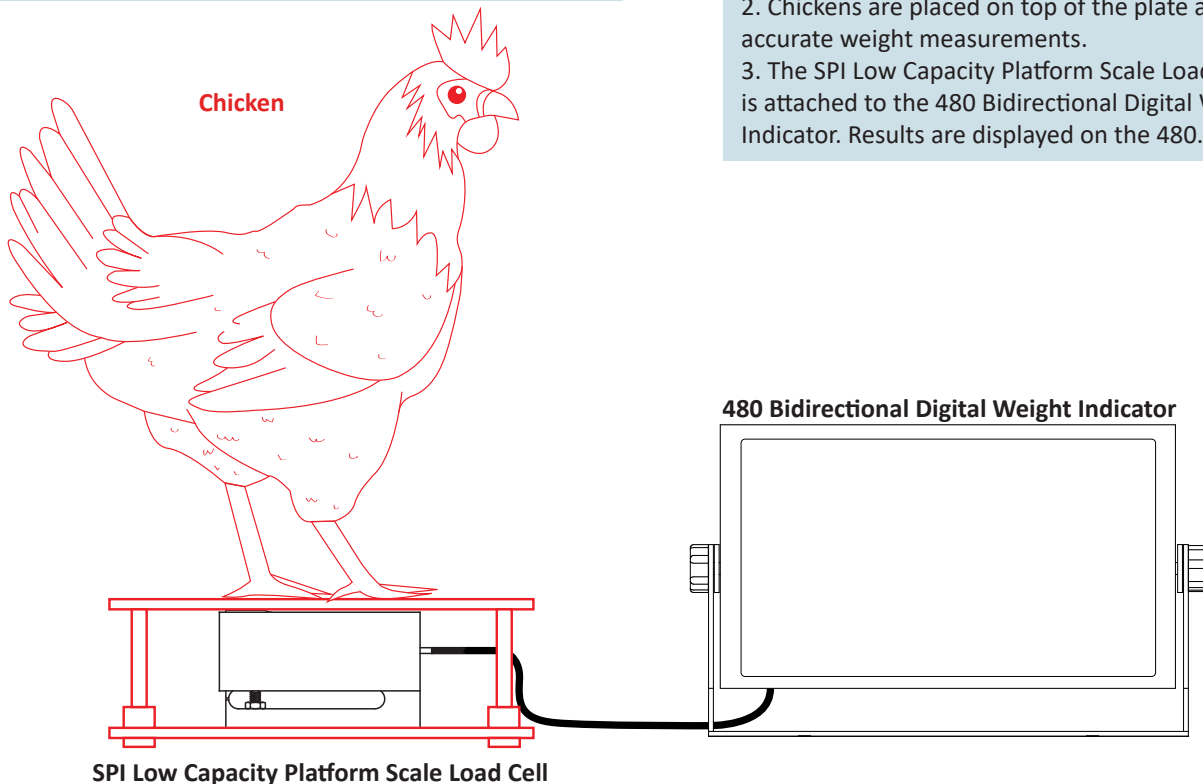

The customer is able to weigh their chickens, and maintain their weight through the accurate results from Interface's SPI Low Capacity Platform Scale Load Cell.

Materials

- SPI Low Capacity Platform Scale Load Cell
- 480 Bidirectional Digital Weight Indicator

How It Works

1. Metal plates are attached on the top and the bottom of the SPI Low Capacity Platform Scale Load Cell.
2. Chickens are placed on top of the plate and SPI for accurate weight measurements.
3. The SPI Low Capacity Platform Scale Load Cell is attached to the 480 Bidirectional Digital Weight Indicator. Results are displayed on the 480.

Hydraulic Jacking System Testing Load Cell

Industry: Infrastructure

Summary

Customer Need / Challenge

A heavy lift company wants to test their hydraulic jacking system has the ability to lift heavy loads and objects, like a bridge during construction. They want to monitor the forces being applied to ensure the hydraulic jack is not only safe to use, but works well enough to avoid any potential structural issues. They also want the results in real-time.

Interface Solution

Interface's 1200 Standard High Capacity Load Cell can be attached in between the hydraulic jack and a heavy load. The 1200 Standard High Capacity Load Cell will measure the forces of the hydraulic jack as it lifts the load cell located in between the jack and the object. With the 9890 Strain Gage, Load Cell, & mV/V Indicator, the customer is also able to see the results in real-time.

Results

The heavy lift company tested their hydraulic jack, resulting in it being safe and functions properly to be sold. It also ensures buyers that the hydraulic jack system upholds its use of continuous heavy load lifting or moving, and maintains structural probity.

Materials

- 1200 Standard High Capacity Load Cell
- 9890 Strain Gage, Load Cell, & mV/V Indicator

How It Works

1. Multiple 1200 Standard High Capacity Load Cell's are located in between the hydraulic jack and a heavy lifting load.
2. The 1200's will be connected to its own 9890 Strain Gage, Load Cell, & mV/V Indicator to give accurate and real-time results of the forces from hydraulic jacking system when it puts compression on the load cell against the heavy load.

Tractor Linkage Draft Control Load Pin

Industry: Agriculture

Summary

Customer Need / Challenge

A farmer wants to measure the forces applied on their tractor's draft control, between the tractor and any linked on attachments. Measuring the force will help the farmer be able sense any strains on the hitch of the tractor, and will be needed in order to apply any specific settings to the draft control when the tractor encounters rough terrain.

Interface Solution

Interface's WTSLP Wireless Stainless Steel Load Pin is a wireless load pin that can be installed directly in the hitch, replacing the normal shear pin of the tractor. Force results are transmitted wirelessly to the WTS-BS-4 USB Industrial Base Station, where the customer can view the results on their PC computer or Laptop with the supplied WTS toolkit. The customer can also view results on the WTS-BS-1-HS Handheld Display for Single Transmitters in real-time.

Results

The customer is able to determine the specific draft control settings for their tractor after using Interface's custom solution Wireless Load Pin and Wireless Telemetry System products.

Materials

- WTSLP Wireless Stainless Steel Load Pin
- WTS-BS-1-HS Handheld Display for Single Transmitters
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit (graphing, logging, and set up software, included with WTS-BS-4)
- Customer PC Computer or Laptop

How It Works

1. The WTSLP Wireless Stainless Steel Load Pin is installed where the tractor's original shear pin would be located.
2. An implement is installed to the hitch.
3. The force results are measured and relayed to the wireless telemetry systems, such as the WTS-BS-4 USB Industrial Base Station, where the customer is able to review the results on their PC computer or laptop with the supplied WTS toolkit. It is also transmitted to the WTS-BS-1-HS handheld display, where customers can view the measurements alternatively in real-time.

Mooring Quick Release Hooks (QRH) Load Pin

Industry: Maritime

Summary

Customer Need / Challenge

A customer wants to test their Quick Release Hook (QRH) system when their vessels are docked. They want to ensure the mooring lines are secured, but also, the quick release hooks are able to be easily and safely released

Interface Solution

Interface's WTSLP Stainless Steel Load Pin can be installed into the quick release hook, where forces from the mooring lines can be measured and displayed when paired with the WTS-BS-4 USB Industrial Base Station. The load tension forces are displayed in real-time on the customers PC or laptop. The WTS-RM1 Wireless Relay Output Receiver Module alarm can also be triggered for the customer when maximum safety work load capacities have been reached or are overloaded.

Results

The customer was able to determine if their quick release hooks worked effectively within the safe working limit specifications, and was aware of any potential overload situations.

Materials

- WTSLP Stainless Steel Load Pin
- WTS-RM1 Wireless Relay Output Receiver Module
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit (graphing, logging, and set up software, included with WTS-BS-4)
- Customer PC Computer or Laptop

How It Works

1. The WTSLP Stainless Steel Load Pin is installed in the quick release hook.
2. Forces are measured and recorded using the WTS-BS-4 USB Industrial Base Station, and results are displayed on the customers PC computer or laptop.
3. When maximum capacities have been reached, the WTS-RM1 Wireless Relay Output Receiver Module triggers an alarm for the customer to be notified.

Livestock Weighing System

Load Beam

Industry: Agriculture

Summary

Customer Need / Challenge

A rancher wants to accurately weigh their cows for multiple reasons. They want to make sure their cows are at a healthy weight, and also want to maintain their weight. But they also want to know the optimal time for breeding based on the weight of their livestock.

Interface Solution

Interface's solution is to bolt 4 SSB Sealed Beam Load Cells at the bottom of a metal platform, that is placed on the inside of the customer's cattle cage. Once the cow has walked onto the plate, the SSB Sealed Beam Load Cells will measure the force pressure applied. With all 4 connected to JB104SS Junction Box, which is then connected to the 480 Bidirectional Weight Indicator, combined accurate weight results will be displayed.

Results

The customer was able to determine accurate weight measurements of their livestock in order to keep them healthy, or, to determine when was a good time to breed.

Materials

- (4) SSB Sealed Beam Load Cells
- JB104SS Junction Box
- 480 Bidirectional Weight Indicator

How It Works

1. (4) SSB Sealed Beam Load Cells are bolted to the bottom of a metal platform, which was placed inside a cattle cage.
2. A cow was led inside the cattle cage, where it was weighed on the metal platform.
3. The multiple SSB's were wired together to a JB104SS Junction Box, which was then connected to the 480 Bidirectional Weight Indicator to measure the combined results of the 4 SSB Sealed Beam Load Cells.

Aircraft Lifting Equipment Load Cell

Industry: Aerospace

Summary

Customer Need / Challenge

An aerospace company wants to check if the valves on their aircraft lifting equipment is working safely and properly.

Interface Solution

Interface's solution is to install a 1200 Standard High Capacity Load Cell in between the aircraft testing rig and the lifting jack. The load cell will measure the load's force safety valve when the lifting equipment opens. Results will be sent to the 9890 Strain Gage, Load Cell, & mV/V Indicator, where the customer can see it displayed in real-time.

Results

The customer was able to determine that the aircraft lifting equipment was working properly. Since they are ensured of its safe functionality, it can now be used on real aircrafts that need to be lifted.

Materials

- 1200 Standard High Capacity Load Cell
- 9890 Strain Gage, Load Cell, & mV/V Indicator

How It Works

1. A 1200 Standard High Capacity Load Cell is placed between the aircraft test rig and the lifting jack.
2. The 1200 Standard High Capacity Load Cell measures the forces of the lifting jack, to ensure it can lift the rig properly.
3. Force results are sent 9890 Strain Gage, Load Cell, & mV/V Indicator, where the customer can view displayed results in real-time.

Aircraft Engine Hoist Load Shackle

Industry: Aerospace

Summary

Customer Need / Challenge

An aerospace company wants to test their aircraft engine hoist in order to safely lift, remove, or install engines efficiently and safely.

Interface Solution

Interface's solution is to install WTSSHK-B-HL Wireless Bow Shackles to the aircraft engine hoist. A heavy load will be added to the hooks where the aircraft engine would be. Results from the heavy load will be sent wirelessly to both the WTS-BS-4 USB Industrial Base Station attached to the customer's computer or laptop, and the WTS-1-HS Handheld display for single transmitters.

Results

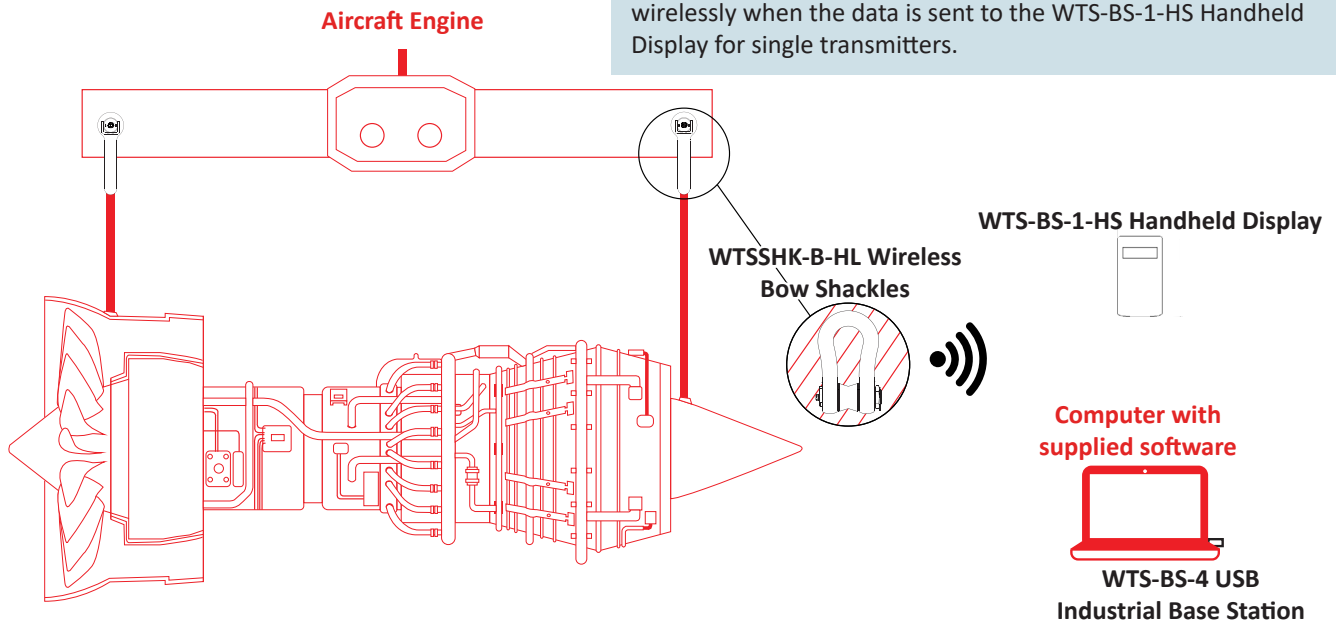

The customer was assured that the aircraft engine hoist was strong and secure enough to lift a heavy engine when installing or removing an engine inside of an aircraft.

Materials

- (2) WTSSHK-B-HL Wireless Bow Shackles
- WTS-BS-4 USB Industrial Base Station
- WTS-BS-1-HS Handheld Display for Single Transmitters
- Customer PC or Laptop

How It Works

1. 2 WTSSHK-B-HL Wireless Bow Shackles are installed onto the aircraft engine hoist.
2. A heavy load is attached to the hooks of the hoist and slings.
3. The WTSSHK-B-HL Wireless Bow Shackles measure the forces of the heavy load, and transmit the data wirelessly to the customer's computer or laptop through the WTS-BS-4 USB Industrial Base Station. The customer can also view results wirelessly when the data is sent to the WTS-BS-1-HS Handheld Display for single transmitters.

Commercial Fishing Wire Rope Testing Tension Link

Industry: Maritime

Summary

Customer Need / Challenge

A commercial fishing owner wants to measure the force tension of the wire fishing rope connected to the fishing cage or net when their vessel goes to catch. They want to ensure the wire rope is strong enough and safe enough to hold the maximum capacity of fish caught in the cage or net.

Interface Solution

Interface's WTSTL Wireless Tension Link Load Cell was attached between the end of the cable, and the end that hooks onto the fishing net. This tension link will be able to measure the forces of the full net of fish, or, a heavy load at maximum capacities. The data information can be transmitted to both the WTS-BS-1-HS Handheld Display for Single Transmitters, or to the customers computer laptop through the WTS-BS-4 USB Industrial Base Station.

Results

The customer was able to determine if the fishing cable on their vessel was strong enough to hold the fish cage or net at maximum capacity when out catching.

Materials

- WTSTL Wireless Tension Link Load Cell
- WTS-BS-1-HS Handheld Display for Single Transmitters
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit (graphing, logging, and set up software, included with WTS-BS-4)
- Customer PC Computer or Laptop

How It Works

1. The WTSTL Wireless Tension Link Load Cell is attached at the end of the wire fishing rope.
2. A heavy load that reaches maximum capacity for the wire rope, was added to the end of the WTSTL Wireless Tension Link Load Cell.
3. Force measurements are transmitted to the WTS-BS-1-HS Handheld Digital Display for Single Transmitters and to the customers computer or laptop through the WTS-BS-4 USB Industrial Base Station. With the WTS Toolkit (included with the WTS-BS-4) the customer is able to graph and log the data results with this software onto their computer.

Poultry Feeder Monitoring Torque Transducer

Industry: Agriculture

Summary

Customer Need / Challenge

A customer wants to monitor the motor that operates their poultry feeders. The poultry feeders must give out an equal distribution of feed per poultry house.

Interface Solution

Interface's solution is to use the T5 Standard Precision Pedestal Mount Shaft Style Rotary Torque Transducer, with the speed/angle option, which will be attached between a poultry feeder and a motor with Interface's couplings. Torsion measurements can be graphed and logged using the 9850 Torque Transducer and Load Cell Indicator.

Results

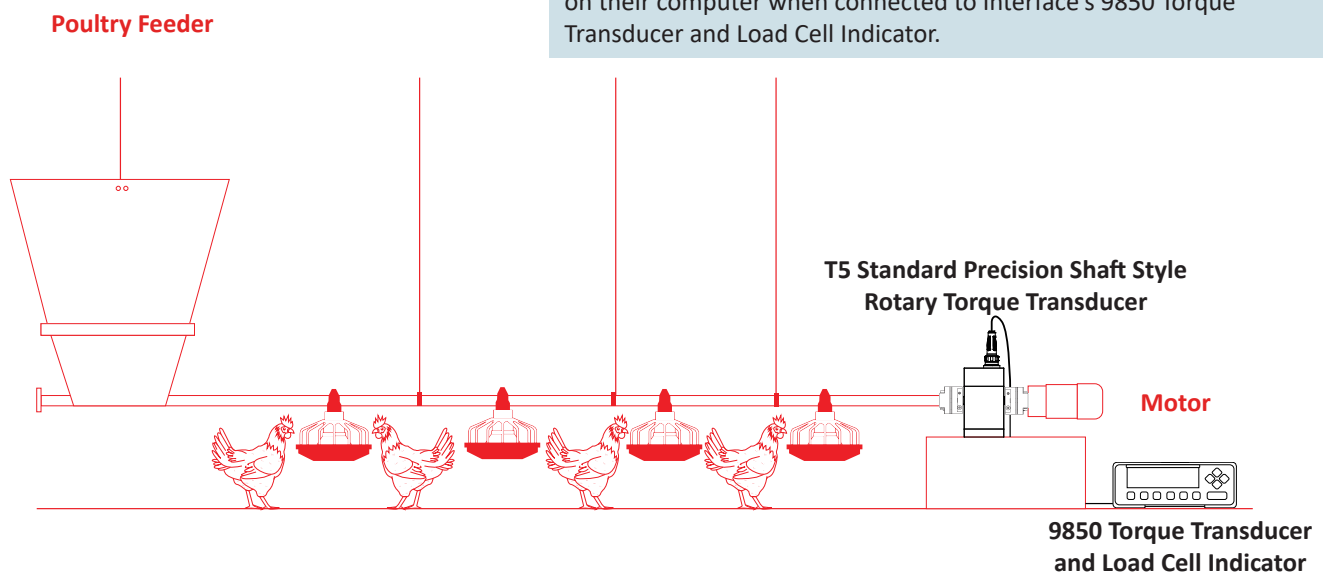

The customer was able to monitor their poultry feeders, and that every feeder got the same amount of food distributed to it.

Materials

- T5 Standard Precision Pedestal Mount Shaft Style Rotary Torque Transducer
- 9850 Torque Transducer and Load Cell Indicator

How It Works

1. The T5 Standard Precision Pedestal Mount Shaft Style Rotary Torque Transducer is attached with Interface's Couplings in between the poultry feeder and the motor.
2. The T5 can measure the torque to see if any of the feed is stuck, which would stop the motor from dispensing the food. It can also detect if the motor is dispensing too much food with the angle measurement, and also count the number of rotations so the food is dispensed is at the same amount each and every time.
3. The customer was able to log and graph the torque results on their computer when connected to Interface's 9850 Torque Transducer and Load Cell Indicator.

Landing Gear Joint Testing Load Pin

Industry: Aerospace

Summary

Customer Need / Challenge

An aerospace company wants to test their new spacecraft assembly and design by testing its landing gear joints. They want to ensure there are no flaws in the gear shock absorber design and can handle the applied forces when the craft lands from a flight.

Interface Solution

Interface's WTSLP Wireless Stainless Steel Load Pins can be installed and replace the normal pin joints. The spacecraft undergoes multiple drop tests at different heights, where the forces applied on the load pins are measured. The force results are transmitted wirelessly to the WTS-BS-4 USB Industrial Base Station in the customer's computer, and the WTS-BS-1-Ha Handheld Digital Display for multiple transmitters.

Results

The customer was able to validate their spacecraft's landing gear structure is working effectively and safely.

Materials

- WTSLP Wireless Stainless Steel Load Pins
- WTS-BS-4 USB Industrial Base Station
- WTS Toolkit
- WTS-BS-1-HA Handheld Display for multiple transmitters
- Customer PC or Laptop

How It Works

1. The WTSLP Wireless Stainless Steel Load Pins are installed in the multiple articulating pin joints.
2. After multiple drop tests, the force measurements are transmitted wirelessly to the customer's computer through the WTS-BS-4 USB Industrial Base Station and the WTS-BS-1-HA Handheld Display for multiple transmitters.
3. The customer can record and log data with the supplied WTS toolkit that comes with the WTS-BS-4 USB Industrial Base Station.

Hydropower Turbine Generator Monitoring Torque Transducer

Industry: Infrastructure

Summary

Customer Need / Challenge

A customer wants to monitor and detect any turbine generator faults in their hydroelectric power plant located on a river.

Interface Solution

Interface's solution is to use the T2 Ultra Precision Shaft Style Rotary Torque Transducer and attach it to the turbine generator with Interface's Shaft Style Torque Transducer Couplings. When water from the river pushes through the penstock to the outflow, it moves the turbine blades, creating electricity through the generator shaft. Torsion measurements can be graphed and logged with the 9850 Torque Transducer and Load Cell Indicator-catching any unusual fluctuations and vibrations.

Results

The customer was able to monitor, graph, and log the torque measurement results of the turbine generator.

Materials

- T2 Ultra Precision Shaft Style Rotary Torque Transducer
- Interface Shaft Style Torque Transducer Couplings
- 9850 Torque Transducer and Load Cell Indicator

How It Works

1. The T2 Ultra Precision Shaft Style Rotary Torque Transducer is installed with Interface's Shaft Style Torque Transducer Couplings onto the hydropower turbine generator.
2. Torsion measurements are recorded and sent to the 9850 Torque Transducer and Load Cell Indicator.
3. Customer created their own software that was used to send torque and speed measurements to their control center through RS232 Communication.

Automotive Head Rest Testing Load Cell and Instrumentation

Industry: Test and Measurement

Summary

Customer Need / Challenge

A manufacturer for automotive head rests wants to test the durability of their products. They want to do a number of fatigue testing and force testing on the head rests to make sure it meets durability and high quality standards.

Interface Solution

Interface's solution is to install Model 1000 Fatigue-Rated LowProfile™ Dual-Bridge Load Cell to the customer's actuator mechanism. This load cell is perfect for fatigue testing and reports highly accurate results through the fatigue cycling. The results are collected by using the SI-USB Universal Serial Bus Dual Channel PC Interface Module, which synchronizes the data directly from the load cell and the string pot (for measuring distance) to the customer's computer.

Results

The head rest manufacturer was able to get highly accurate data through the fatigue testing cycle, using Interface's products.

Materials

- 1000 Fatigue-Rated LowProfile™ Dual-Bridge Load Cell
- SI-USB Universal Serial Bus Dual Channel PC Interface Module with included SI-USB software
- PLC Programmable Logic Controller
- String Pot
- Customer Actuator Mechanism
- Customer's PC or Laptop

How It Works

1. The 1000 Fatigue-Rated LowProfile™ Dual-Bridge Load Cell is installed at the end of the customer's actuator mechanism.
2. The head rest undergoes a cycle of fatigue testing, where the results are recorded using the 1000 Fatigue-Rated LowProfile™ Dual-Bridge Load Cell.
3. The data results are collected with the SI-USB Universal Serial Bus Dual Channel PC Interface Module.
4. These results can be displayed when connected to the customer's PC computer or laptop using the supplied SI-USB software.

Aircraft Screwdriver Fastening Control Torque Transducer

Industry: Test and Measurement

Summary

Customer Need / Challenge

An airplane manufacturer needs a solution where they can control the torque when fastening screws on their airplane models. They do not want to create any damage to materials, or apply too much torque when plane components are being fastened together.

Interface Solution

Interface's Model T15 Hex Drive Rotary Torque Transducer can be attached to the fastening work bench, measuring and recording torque, rotational speed, and angle of the screwdriver. The LWCF Clamping Force Load Cell is installed, measuring the forces applied on the screw being fastened. Results are sent to the SI-USB4 4-channel USB Interface Module, which is connected to the customer's PC or laptop where data is logged, graphed, and displayed.

Results

The airplane manufacturer was able to calibrate their screwdriver by measuring its torque, rotational speed, and angle, when attaching materials together for their airplane. They were also able to measure the forces being applied to the screw, to ensure it was not applying too much torque to the components.

Materials

- T15 Hex Drive Rotary Torque Transducer
- LWCF Clamping Force Load Cell
- SI-USB4 4-channel USB Interface Module
- Customer PC or Laptop

How It Works

1. The T15 Hex Drive Rotary Torque Transducer is attached to the screwdriver fastening bench.
2. The LWCF Clamping Force Load Cell is placed beneath the bolt head.
3. The T15 Hex Drive Rotary Torque Transducer measures the screwdrivers torque, rotational speed, and angle, in order for the customer to determine the right amount of torque needed to be applied to the screw to prevent any damage to materials being fastened together.
4. The LWCF Clamping Force Load Cell measures the forces applied to the screw, so the customer can determine the maximum torque it can take.
5. The measurements and results are send to the SI-USB4 4-Channel USB Interface Module, where the customer can record the results when connected to their PC or laptop.

Aerial Lift Overload Control Load Cell

Industry: Infrastructure, Test and Measurement

Summary

Customer Need / Challenge	Interface Solution	Results
A manufacturing company for aerial lifts wants to test its self-propelled boom lift to ensure it can operate at heavy capacities when in use, and at different angles. They want to prevent any accidents in case of a lifting overload, for the safety of any working individual who uses it.	Interface's solution is to attach the 3A160 3-Axis Force Load Cell to the bottom of the bucket of the boom lift. The 3A160 3-Axis Force Load Cell gives high accuracy results, which can be displayed using the 920i Programmable Weight Indicator and Controller in real time.	The manufacturing company tested their aerial boom lifts and determined it was safely operable when maximum capacities has been reached.

Materials

- 3A160 3-Axis Force Load Cell
- 920i Programmable Weight Indicator and Controller

How It Works

1. The 3A160 3-Axis Force Load Cell is installed where the lift's arm ends at the bottom of the boom lift's bucket.
2. Different loads are added inside the boom lift's bucket, at different angles. The 3A160 3-Axis Force Load Cell delivers high accuracy results at each capacity.
3. Results are displayed for the customer using the 920i Programmable Weight Indicator and Controller, where the instrument will measure all three bridges.

Garbage Truck On-Board Weighing Torque Transducer

Industry: Test and Measurement

Summary

Customer Need / Challenge

A garbage disposal company wants to test the load capacity of their garbage truck bins, so they know when it has reached maximum capacity.

Interface Solution

Interface's solution is to customize and install 4 SSB Sealed Beam Load Cells under the garbage box body, on either side. When trash continues to be piled inside the box body, it will push more force down onto the SSB Sealed Beam Load Cells. When maximum load capacity has been reached, the results can be reviewed and displayed when connected to the 482 Battery Powered Bidirectional Weight Indicator in real time.

Results

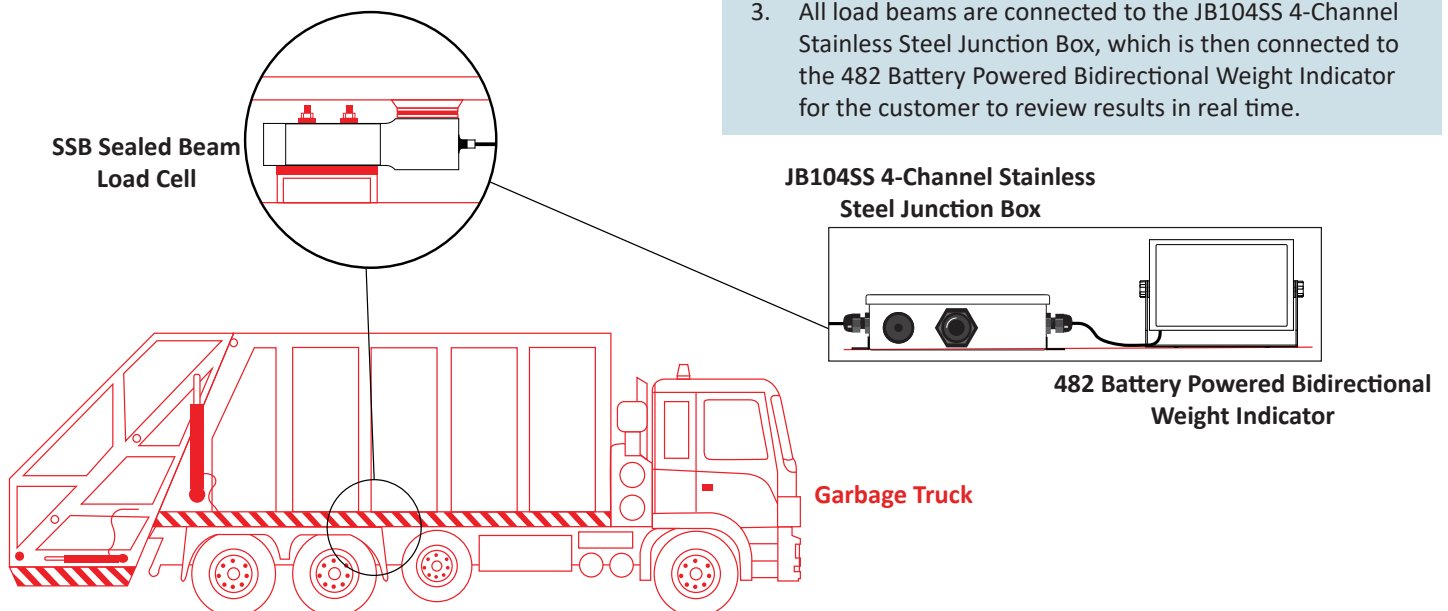

The customer was able to test the maximum load capacity of the garbage bin attached to the truck, so they know when to empty the truck's garbage at the transfer station.

Materials

- (4) SSB Sealed Beam Load Cells
- JB104SS 4-Channel Stainless Steel Junction Box
- 482 Battery Powered Bidirectional Weight Indicator

How It Works

1. The SSB Sealed Beam Load Cells are installed under the truck's garbage box body, on opposite sides.
2. As more trash is collected into the box body, more force weight is added and measured using the SSB Sealed Beam Load Cells.
3. All load beams are connected to the JB104SS 4-Channel Stainless Steel Junction Box, which is then connected to the 482 Battery Powered Bidirectional Weight Indicator for the customer to review results in real time.

Silo Grain Dispensing Load Cell and Wireless Telemetry System

Industry: Agriculture

Summary

Customer Need / Challenge

A silo is returning grain into a dispensing container. A customer wants to measure and record the grain being put in and out of their grain dispensing container, as it dispenses content into a carrier truck for transportation. The customer would also prefer a wireless solution.

Interface Solution

Interface suggests a wireless solution, by installing WTS 1200 Standard Precision LowProfile™ Wireless Load Cells at the legs of the grain dispensing container. The 1200 can measure the distribution correlation of the grain as it inputted and outputted from the container. Results will be transmitted and displayed using the WTS-BS-1-HA Handheld Display for multiple transmitters, and will be logged and graphed using the WTS-BS-4 USB Industrial Base Station.

Results

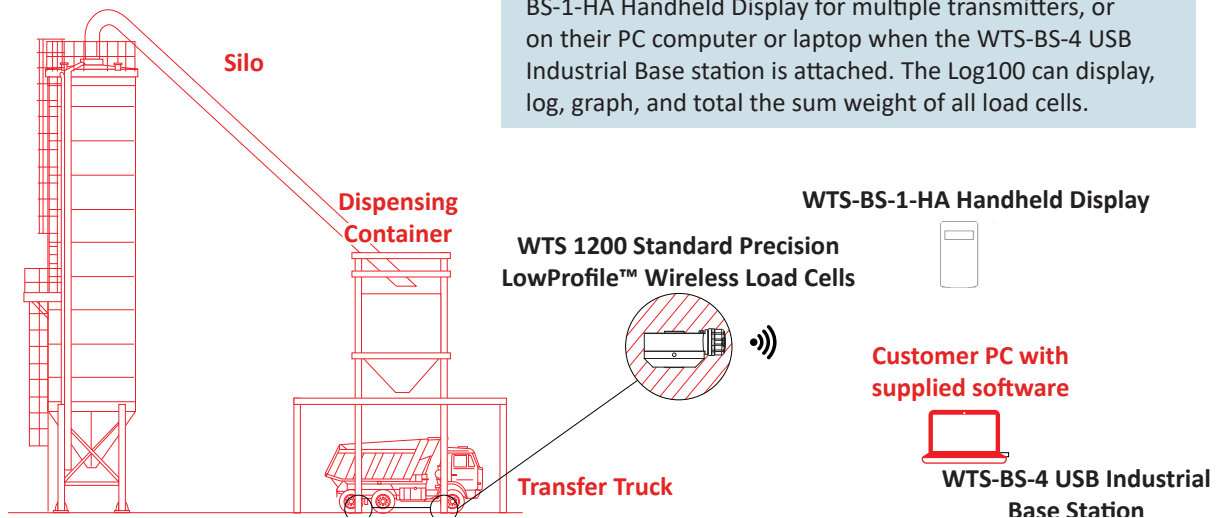

The customer was able to log and graph the measurement results of the grain content that the silo dispenses into the grain dispensing container, and also when the grain is dispensed into the carrier truck.

Materials

- WTS 1200 Standard Precision LowProfile™ Wireless Load Cells
- WTS-BS-4 USB Industrial Base Station
- WTS-BS-1-HA Handheld Display for multiple transmitters
- WTS Toolkit and Log100 Software
- Customer PC or Laptop

How It Works

1. Multiple WTS 1200 Standard Precision LowProfile™ Wireless Load Cells are installed at the legs of the grain dispensing container.
2. As the silo puts grain into the grain dispensing container, force measurements of the distribution is measured and totaled using the supplied Log100 Software.
3. The customer can view real-time results using the WTS-BS-1-HA Handheld Display for multiple transmitters, or on their PC computer or laptop when the WTS-BS-4 USB Industrial Base station is attached. The Log100 can display, log, graph, and total the sum weight of all load cells.

Waste Management Container Weighing Load Cell

Industry: Test and Measurement, Infrastructure

Summary

Customer Need / Challenge	Interface Solution	Results
A waste management company wants to measure the capacity of their waste containers in order to know when it is time to dispose the waste.	Interface's Model WTS 1200 Standard Precision LowProfile™ Wireless Load Cells can be installed at the bottom of each waste container leg to measure the sum weight of the container. The data is transmitted to the WTS-BS-4 USB Industrial Base Station with the supplied Log100 software.	The customer was able to determine when their waste container was at full capacity in order to dispose of the waste, or to transfer it.

Materials

- (4) WTS 1200 Standard Precision LowProfile™ Wireless Load Cells
- WTS Toolkit and Log100 Software
- WTS-BS-4 USB Industrial Base Station
- Computer PC or Laptop

How It Works

1. Four WTS 1200 Standard Precision LowProfile™ Wireless Load Cells are installed and mounted to the bottom of the waste container legs.
2. The load cells collect the force measurements and sum the total weight of the waste container. The data is transmitted to the customer's laptop through the WTS-BS-4 USB Industrial Base Station using the Log100 Software. Data can be logged, graphed, and sent to the cloud using the supplied software.

Snack Weighing and Packaging Machine

Interface Mini™

Industry: Test and Measurement

Summary

Customer Need / Challenge

A snack manufacturing brand wants to weigh the amount of their snacks that is automatically dispersed into the bags during the packaging process. In this case, they want to weigh their potato chips being packaged. The company wants to ensure the potato chips are at the exact weight needed due to regulatory standards.

Interface Solution

Interface's solution is to use multiple SPI Platform Scale Load Cells, and install it to the potato multi-head weigher and packaging machine. The SPI Platform Scale Load cells are installed inside of the mount that attaches the head weigher to the packaging machine. Force results from the potato chips are read by the load cells and sent to the ISG Isolated DIN Rail Mount Signal Conditioner, where the customer is able to control the automated production from their command center.

Results

The customer was able to determine the weight of the potato chips being distributed into their bags with highly accurate results. They also were able to control the automated production process with the provided instrumentation. They will use this same weighing method for other snacks that need to be packaged.

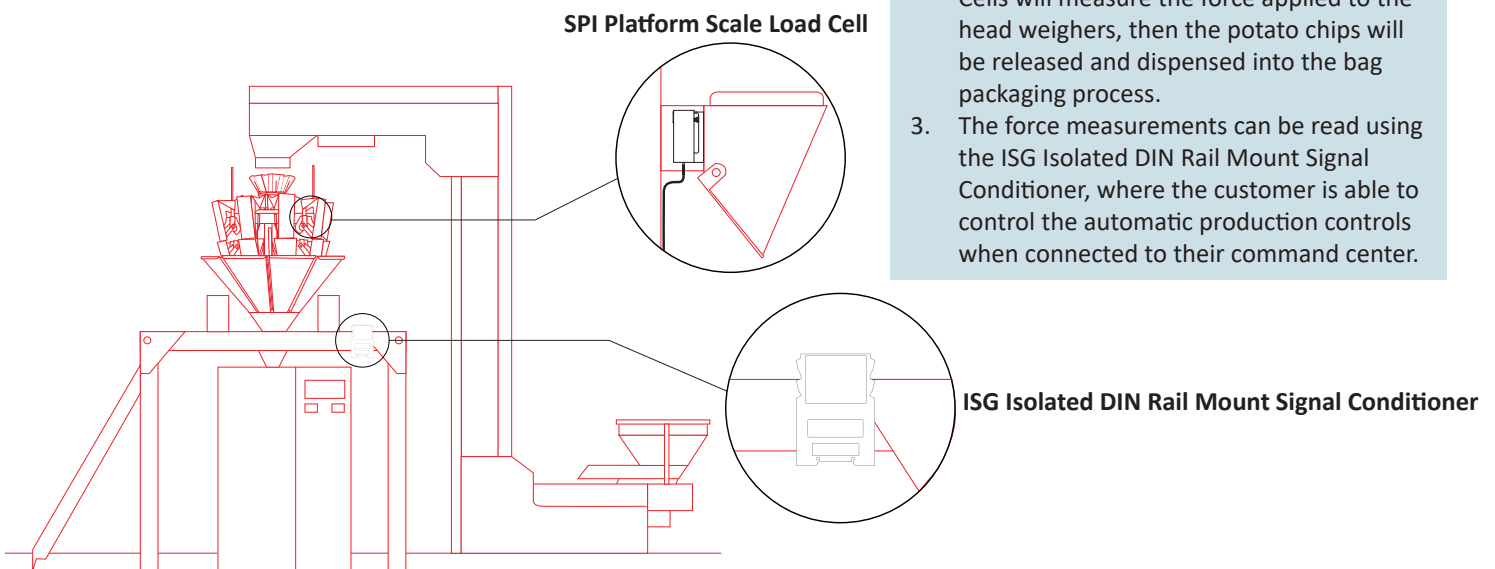

Materials

- Multiple SPI Platform Scale Load Cells
- ISG Isolated DIN Rail Mount Signal Conditioner

How It Works

1. Multiple SPI Platform Scale Load Cells are installed onto the insides of the head weighers of the packaging machines.
2. When potato chips are dispensed into the heads, the SPI Platform Scale Load Cells will measure the force applied to the head weighers, then the potato chips will be released and dispensed into the bag packaging process.
3. The force measurements can be read using the ISG Isolated DIN Rail Mount Signal Conditioner, where the customer is able to control the automatic production controls when connected to their command center.

Snack Weighing and Packaging Machine

Water Bottle Dispensing and Weighing

Interface Mini™

Industry: Test and Measurement

Summary

Customer Need / Challenge

A water bottle manufacturer wants to dispense the right amount of fluid into their bottles, and then weigh the water bottles to ensure it is at the labeled weight on their product packaging. This is both to minimize waste, but also to meet the standard requirements.

Interface Solution

Interface suggests using the MBP Miniature Beam Load Cell, and attaching it under a plate or platform the water bottle is placed on while it is being filled with fluids. The force weight is measured by the MBP Miniature Beam Load Cell, and connected to the 9870 High Speed High Performance TEDS Ready Indicator where results are captured, displayed, and can be recorded by the customer based on their needs.

Results

The water bottle manufacturer received high accurate results of each water bottle being weighed in real time.

Materials

- MBP Miniature Beam Load Cell
- 9870 High Speed High Performance TEDS Ready Indicator

How It Works

1. The MBP Miniature Beam Load Cell is installed under the mechanism that dispenses water into the water bottles, with a plate or platform on top.
2. After the fluid is dispensed into the water bottle, the MBP Miniature Beam Load Cell measures the forces applied.
3. Connected to the analog output of the customer's control center, the 9870 High Speed High Performance TEDS Ready Indicator will display and record highly accurate result.
4. If the bottle does not meet the standard weight requirements, the quality department will be notified that it needs to be quarantined and sent for review.

Customers Control System

9870 High Speed High Performance TEDS Ready Indicator

Tablet Hardness Testing

Interface Mini™

Industry: Medical and Healthcare

Summary

Customer Need / Challenge	Interface Solution	Results
A pharmaceutical tablet producer wanted to test and monitor the hardness of the tablets being created in their tablet forming machine.	Interface's SML Low Height S-Type Load Cell was mounted to the hardness device inside the tablet forming machine. The SML Low Height S-Type Load Cell was then connected to the 9870 High-Speed High Performance TEDS Ready Indicator to record the force measurements.	The tablet producer was able to verify and test the specific hardness needed for their tablets being produced by their tablet forming machine.

Materials

- SML Low Height S-Type Load Cell
- 9870 High-Speed High Performance TEDS Ready Indicator

How It Works

1. The SML Low Height S-Type Load cell was customized to fit into the hardness testing device inside the tablet forming machine.
2. The output of the SML was connected to the 9870 High-Speed High Performance TEDS Ready Indicator.
3. The customer was able to calibrate and clarify the specified hardness for the tablets being formed.

Spring Compression Testing Multi-Axis

Industry: Test and Measurement

Summary

Customer Need / Challenge

A customer wants to test the performance of their springs, but also the functionality of their spring test stand with a wireless solution.

Interface Solution

Interface suggests using one of their 5200XYZ 3-Axis Force Moment Load Cell, and installing it into the customer's spring compression frame. The 5200XYZ 3-Axis Force Moment Load Cell will measure the force compression of the spring, connect to multiple WTS-AM-1E Wireless Strain Bridge Transmitter Modules, which will display the information wirelessly to the 9812-WTS-AL4-3, and also triggers an alarm if needed.

Results

The customer was able to wirelessly get compression results on the spring being tested. They were also able to verify their spring compression test stand was working effectively.

Materials

- 5200XYZ 3-Axis Force Moment Load Cell
- WTS-AM-1E Wireless Strain Bridge Transmitter Module
- 9812-WTS-AL4-3
- Customer Spring Test Stand
- Customer PC or Laptop

How It Works

1. The 5200XYZ 3-Axis Force Moment Load cell is installed into the customer's spring compression frame, under the spring itself, containing 3 total outputs.
2. The spring was compressed, and force measurements read by the 5200XYZ 3-Axis Force Moment Load Cell is connected to the multiple WTS-AM-1E Wireless Strain Bridge Transmitter Modules, which then transmits output information wirelessly to the 9812-WTS-AL4-3. If needed, the 9812-WTS-AL4-3 can be programmed to trigger an alarm.
3. The customer was able to log data onto their PC computer.

Tablet Machine Hardness Tester Calibration

Interface Mini™

Industry: Medical and Healthcare

Summary

Customer Need / Challenge

A customer wants to conduct a tablet hardness tester calibration in their tablet machine. The customer needs a load cell that specifically lays and measures the forces horizontally, due to the horizontal lay out of the tablet machine.

Interface Solution

Interface's MCC Miniature Compression Load Cell can measure forces on its side, with a small cable exit that attaches to the customer's tablet machine. This measures the force applied to the hardness testing mechanism inside of the machine. The BlueDAQ software included also records the results and compares it to the reference load cell. Data is sent to the 9330 Battery Powered High Speed Data Logging Indicator for the customer to view, log, and graph the results.

Results

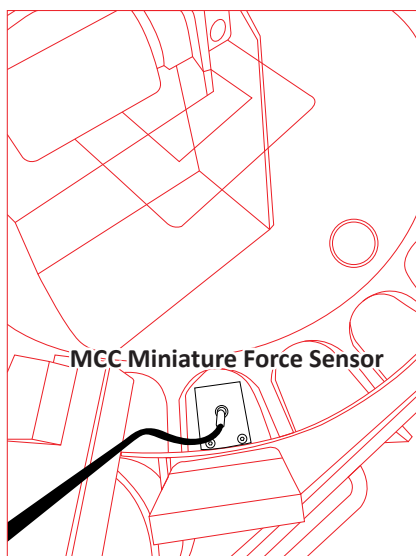

The customer successfully was able to verify and calibrate the tablet machine's hardness tester in order to conduct accurate hardness testing on tablets. Compared to other load cells, Interface's MCC Miniature Compression Load Cell was perfect due to its small size, and convenient to measure the forces on its side.

Materials

- MCC Miniature Compression Load Cell
- 9330 Battery Powered High Speed Data Logging Indicator
- BlueDAQ Software included with instrument purchase
- Customer's PC or Laptop

How It Works

1. The MCC Miniature Compression Load Cell is connected to the hardness testing mechanism inside of the tablet machine.
2. Calibration results are sent to the 9330 Battery Powered High Speed Data Logging Indicator, where data is logged and graphed.
3. Data is processed using BlueDAQ Software, which stores and logs data in the customer's PC computer or laptop.

Tablet Machine

9330 Battery Powered High Speed Data Logging Indicator

Mobile Force System Wireless Telemetry System

Industry: Test and Measurement

Summary

Customer Need / Challenge

A customer wants a mobile measurement system that can perform force tests. They need a customizable portable system that can both withstand extreme temperatures and rough environments. They also need a system that has a rechargeable battery included.

Interface Solution

Interface's solution is to create a portable case with multiple WTS 1200 Standard Precision LowProfile™ Wireless Load Cells, 9812-WTS Wireless Panel Mount Display for Single Transmitters, and the WTS-BS-3E Wireless Base Station. This can connect to the tablet computer to view results. Multiple WTS-ANTE Telemetry Antennas can also extend wireless range. An inverter and rechargeable battery is also installed at the bottom of the foam case so the customer can charge on the go, using a wall outlet or vehicle power outlet.

Results

The customer was able to easily perform multiple force tests wirelessly in multiple different environments with Interface's customizable mobile portable system.

Materials

- WTS 1200 Standard Precision LowProfile™ Wireless Load Cells
- WTS-BS-3E Wireless Base Station
- 9812-WTS Wireless Panel Mount Display for Single Transmitters
- WTS-ANTE Telemetry Antennas
- Windows Based Tablet-Computer
- Custom made Pelican case with inverter and rechargeable battery pack

How It Works

1. The WTS 1200 Standard Precision LowProfile™ Wireless Load Cells and the 9812-WTS Wireless Panel Mount Display for Single Transmitters are installed safely in the custom made mobile case.
2. When ready for transport, the load cells can be removed and attached to perform force tests.
3. When all force measurements have been recorded, all load cells and instrumentation can be returned back into its casing for further transport.

Bike Frame Fatigue Testing Load Cell

Industry: Test and Measurement

Summary

Customer Need / Challenge

A bike manufacturing company wants to perform a fatigue test on their bike frames. They want to analyze the strength of their bike frames in order to ensure durability and high quality standards.

Interface Solution

Interface suggests installing Model 1000 Fatigue-Rated LowProfile™ Load Cell to the customer's bike frame fatigue tester. This load cell will provide the customer highly accurate results through the fatigue cycling. Results are collected using the INF-USB3 Universal Serial Bus Single Channel PC Interface Module, and displayed on the customer's PC or Laptop with Interface's provided software.

Results

The bike manufacturing company successfully had their bikes undergo fatigue frame testing, receiving highly accurate results with Interface's load cell and instrumentation.

Materials

- 1000 Fatigue-Rated LowProfile™ Load Cell
- INF-USB3 Universal Serial Bus Single Channel PC Interface Module with supplied software
- Customer PC or Laptop

How It Works

1. The 1000 Fatigue-Rated LowProfile™ Load Cell is attached to the actuator of the fatigue testing machine.
2. The load cell undergoes a number of fatigue cycles on the bike frame, and records highly accurate results.
3. The data results are collected using the INF-USB3 Universal Serial Bus Single Channel PC Interface Module. These results can be displayed when connected to the customer's PC or laptop using the supplied software with the INF-USB3 Universal Serial Bus Single Channel PC Interface Module.

Bike Load Testing

Interface Mini™ and Wireless Telemetry System

Industry: Test and Measurement

Summary

Customer Need / Challenge

A mountain bike manufacturing company wants a system that measures their bike frames load capacities and vibrations on the frame. They want to ensure the bike's high quality and frame load durability during this final step of the product testing process.

Interface Solution

Interface suggests installing Model SSMF Fatigue Rated S-Type Load Cell, connected to the WTS-AM-1E Wireless Strain Bridge, between the mountain bike's seat and the bike frame. This will measure the vibrations and load forces applied onto the bike frame. The results will be captured by the WTS-AM-1E and transmitted to the customer's PC using the WTS-BS-6 Wireless Telemetry Dongle Base Station.

Results

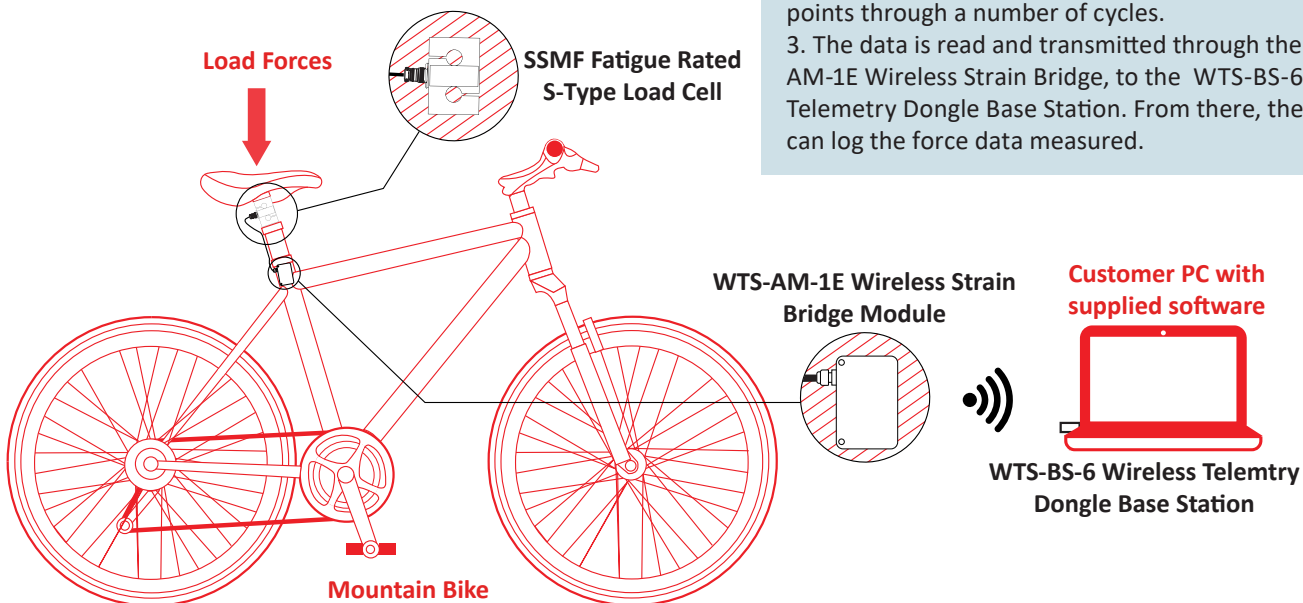

The mountain bike manufacturing company was able to gather highly accurate data to determine that their bikes met performance standards through this final testing.

Materials

- SSMF Fatigue Rated S-Type Load Cell
- WTS-AM-1E Wireless Strain Bridge
- WTS-BS-6 Wireless Telemetry Dongle Base Station
- Customer PC or Laptop

How It Works

1. The SSMF Fatigue Rated S-Type Load Cell is connected to the WTS-AM-1E Wireless Strain Bridge, and installed between the mountain bike's seat and the bike frame.
2. A heavy load is added to the seat, where the SSMF Fatigue Rated S-Type Load Cell measures the vibrations and load forces applied to the bike to indicate any stress points through a number of cycles.
3. The data is read and transmitted through the WTS-AM-1E Wireless Strain Bridge, to the WTS-BS-6 Wireless Telemetry Dongle Base Station. From there, the customer can log the force data measured.

Bike Power Pedals

S-Type and Wireless Telemetry System

Industry: Test and Measurement

Summary

Customer Need / Challenge

A bike manufacturer wants to test the functionality of their power pedals. They need a reliable system to measure how much force the cyclist pushes down onto the bike pedals, and they would prefer a wireless system that can be paired with their computer to review data results.

Interface Solution

Interface suggests 4 Model SML Low Height S-Type Load Cells installed within the bike's pedals. The 4 SMLs are paired with 2 WTS-AM-4 Wireless Strain Bridge Transmitter Modules, which will transmit the force data from the cyclist to the WTS-BS-6 Wireless Telemetry Dongle Base Station Dongle connected to the customer's PC or laptop. Interface will also provide the software needed with their wireless products.

Results

The bike manufacturer was able to measure the pedal power applied by the cyclist. The customer was able to measure and log the data wirelessly transmitted to their PC computer.

Materials

- (4) SML Low Height S-Type Load Cells
- (2) WTS-AM-4 Wireless Strain Bridge Transmitter Modules
- WTS-BS-6 Wireless Telemetry Dongle Base Station
- Customer PC or Laptop

How It Works

1. The SML Low Height S-Type Load Cells are installed inside the bike pedal, connected to the WTS-AM-4 Strain Bridge Transmitter Modules.
2. During the testing stage, a cyclist uses the bike and pushes force down onto the bike pedals.
3. The data is read and transmitted through the WTS-AM-4 Wireless Strain Bridge Modules, to the WTS-BS-6 Wireless Telemetry Dongle Base Station. From there, the customer can log the force data measured.

E-Bike Torque Measurement Torque Transducer

Industry: Test and Measurement

Summary

Customer Need / Challenge

An E-Bike manufacturer needs to test the torque on their electronic bicycles. They need a torque sensing system that measures how much force the bike rider is pedaling onto the pedals, because this determines how much electric power the bike's motor generates.

Interface Solution

Interface suggests installing the Model T12 Square Drive Torque Transducer where the pedal assist sensor would normally be. The T12 Square Drive Torque Transducer's results can be recorded, graphed, and logged using the SI-USB4 4 Channel USB Interface Module when connected to the customer's PC.

Results

The E-Bike manufacturing company successfully tested the torque on their electronic bicycles with Interface's products and instrumentation.

Materials

- T12 Square Drive Torque Transducer
- SI-USB4 4 Channel USB Interface Module
- Customer PC or Laptop

How It Works

1. The T12 Square Drive Torque Transducer is installed and replaces where the outdated pedal sensor is normally located. The T12 is attached to the SI-USB4 4 Channel USB Interface Module.
2. In a controlled environment, a cyclist pedals on the E-Bike and the T12 Square Drive Torque Transducer collects the measurements.
3. The data is sent to the SI-USB4 4 Channel USB Interface Module where the torque measurements are recorded, graphed, and logged when connected to the customer's PC or laptop.

Mountain Bike Shocks Testing Load Cell

Industry: Test and Measurement

Summary

Customer Need / Challenge	Interface Solution	Results
<p>A mountain bike manufacturing company wants to test the durability of the forks on the front of their bikes, and the rear shocks of their bikes as well. They want to test the front suspension, and ensure that the bikes shocks absorption is working properly for bike riders.</p>	<p>Interface suggests installing the 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell in a fatigue frame using the company's bike forks. The forks undergo a fatigue test for a number of hours. Test results from the 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell will be sent to the INF-USB3 Universal Serial Bus Single Channel PC Interface Module where the customer can view, log, and graph the results on their PC computer or laptop with provided software.</p>	<p>The customer was able to test the bike's front and rear shocks using Interface's products. They determined if there were any weak spots in the forks or if it was working properly.</p>

Materials

- 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell
- INF-USB3 Universal Serial Bus Single Channel PC Interface Module
- Customer's PC or Laptop

How It Works

1. The 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell is attached to the actuator of the fatigue testing machine.
2. The bike's forks undergoes a fatigue cycling test where force results are collected by the 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell.
3. The results captured by the 1000 High Capacity Fatigue-Rated LowProfile™ Load Cell is sent to the INF-USB3 Universal Serial Bus Single Channel PC Interface Module, where results can be graphed and logged on the customer's PC with provided software.

Gaming Simulation Brake Pedal

Interface Mini™

Industry: Test and Measurement

Summary

Customer Need / Challenge	Interface Solution	Results
A gaming company wants to switch from the standard racing pedals, to a load cell based pedal system for their racing simulation game. Compared to the standard racing simulation pedals, load cell pedals are more advanced and offer more accurate results. They want a wireless system that will measure the strength of the pressure received by the pedals that will detect the perfect amount of braking power.	Interface's BPL Pedal Load Cell can be installed onto the gaming brake pedal to measure the force applied when someone puts their foot on it. Forces are measured and recorded using the WTS-AM-1E Wireless Strain Bridge Transmitter Modules, where data is transmitted to the WTS-BS-6 Dongle Base Station when connected to the customer's PC or laptop.	Interface's BPL Pedal Load Cell measured and recorded the pedal forces applied to their racing gaming brake pedals. In comparison to traditional simulation pedals that measure the distance of the pedals when pressed, Interface's load cell pedal system provided a more realistic experience for gamers.

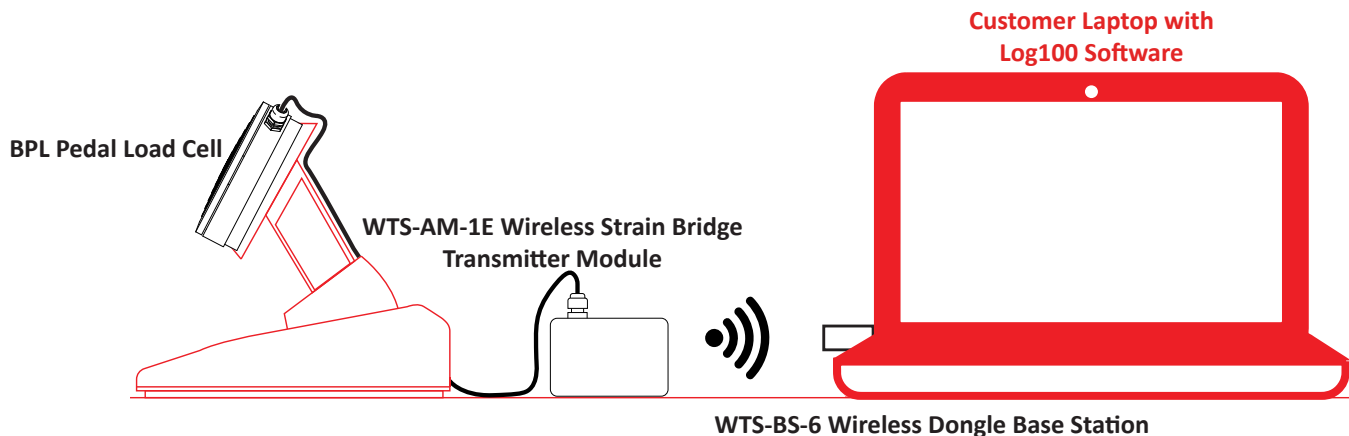

Materials

- BPL Pedal Load Cell
- WTS-AM-1E Wireless Strain Bridge Transmitter Module
- WTS-BS-6 Wireless Telemetry Dongle Base Station
- Log100 Software
- Customer PC or Laptop

How It Works

1. The BPL Pedal Load Cell is installed onto the gaming brake pedal, and is connected to the WTS-AM-1E Wireless Strain Bridge Transmitter Module.
2. The BPL Pedal Load Cell measure the forces applied by the gamer when they put pressure onto the brake pedal.
3. The force results are wireless transmitted to the customer's laptop through the WTS-BS-6 Wireless telemetry Dongle Base Station. The customer was able to log, graph and record using the supplied Log100 Software.

Gaming Simulation Pedals

Tractor PTO Torque Testing Torque Transducer

Industry: Agriculture

Summary

Customer Need / Challenge

A customer wants to measure the torque and speed of their tractor's PTO (power takeoff test) system. They want to ensure the tractor's PTO system is functioning properly, and they want to measure the torque being delivered to an implement.

Interface Solution

Interface's solution is to use their T27 Bearingless Hollow Flange Style Rotary Torque Transducer to measure the tractor's torque and speed of their tractor's PTO system.

Results

Interface's T27 Bearingless Hollow Flange Style Rotary Torque Transducer successfully and accurately measured the torque and speed of the tractor's PTO system.

Materials

- Customer supplied dynamometer
- T27 Bearingless Hollow Flange Style Rotary Torque Transducer
- INF3-USB Universal Serial Bus Single Channel PC Interface Module
- Supplied configuration, display, graphing, and logging software
- Customer PC or Laptop

How It Works

1. The T27 Bearingless Hollow Flange Style Rotary Torque Transducer is bolted to the tractors PTO shaft. A dynamometer is attached on the other end.
2. The T27 Bearingless Hollow Flange Style Rotary Torque Transducer measures the tractor's torque and speed with high accurate results.
3. With the INF3-USB PC Interface Module the customer was able to display, graph, and log the recorded torque and speed of the tractor's PTO system with the supplied INF3-USB software.

Interface is the world's trusted leader in technology, design and manufacturing of force measurement solutions.

Our clients include a "who's who" of the aerospace, automotive and vehicle, medical device, energy, industrial manufacturing, test and measurement industries.

Interface engineers around the world are empowered to create high-level tools and solutions that deliver consistent, high quality performance. These products include load cells, torque transducers, multi-axis sensors, wireless telemetry, instrumentation and calibration equipment.

Interface, Inc., was founded in 1968 and is a US-based, woman-owned technology manufacturing company headquartered in Scottsdale, Arizona.
